THOUGH years ago the early demise of the leading West Australian gold mines was prognosticated it seems they die very hard. For instance, the Ivanhoe. About the year 1911 it came to be thought that its life could be calculated from its ore reserves. At that time, say at June 30, 1911, the quantity of ore estimated to be in sight was 1,010,297 tons, value 44*s*. 3*d*. per ton. A short time ago cabled advice reported

the General Manager's estimate of ore reserves at the end of June 1915 to be 1,010,243 tons, value 36*s.* 9*d.* per ton. Thus, in the interval of four years, though about 930,000 tons have been put through the mill, the quantity of ore in sight shows no alteration. Despite the fall in the value this is not so bad a record, for the Ivanhoe has been producing gold since 1897, and in the 17¾ years to August 1915, 3,318,000 tons have been milled for a gold yield of about £8,100,000, and dividends paid in the period have aggregated £3,400,000, the capital of the Company being £1,000,000, in £5 shares. The fluctuations that have occurred in the recent estimates of ore reserves will be seen from the following:—

Ore Reserves.

	Tons	Value *s.* *d.*
Dec. 31, 1911	1,088,421	43 7
Dec. 31, 1912	1,080,850	40 7
Dec. 31, 1913	991,417	38 6
Dec. 31, 1914	998,718	37 3
June 30, 1914...	1,010,243	36 9

A very appreciable decline in the gold contents of the ore reserves is shown; but this is not to be wondered at, having regard to the fact that at an average depth of 2,400 feet the gold-bearing "greenstone" is penetrated by porphyry dyke, resulting in the impoverishment of the lodes, and that continuance of payable values beneath the dyke has not yet been found. The search in this direction still continues, and it is to be hoped that perseverance will be rewarded. Meanwhile, naturally the fall in the value of the ore reserves has decreased the profits earned and the dividends paid. This will be seen from the following:—

Year ends Dec. 31	Tons (2,000 lb.)	Value of Gold £	Value of Gold Per Ton Milled	Working Costs, Development and Plant £	Working Costs, Development and Plant Per Ton Milled	Profit* £	Profit* Per Ton Milled	Price end of Period

* Miscellaneous expenses averaging £870 per month have to be deducted from profits.

Dividends—1912, 19/0. 1913, 14/0. 1914, June, 2/6; Sept., 2/6; Dec., 2/6; March, 3/0. Total, 10/6. 1915, June, 2/6; Sept., 2/6.

It will be seen above that the recent rate of profit earned has been about 9*s.* per ton. On this basis the 1,010,000 tons of ore reserves in sight have a profit value of about £450,000. The present market price of the £5 shares is 2¼, equal to a market valuation of the undertaking of £450,000, so that the market price of the shares is nearly covered by the profit value of the ore reserves. But in addition the balance sheet at December 31, 1914, showed surplus liquid assets of about £220,000, including £148,000 of investments, a considerable proportion of high-class character. As the market price of 2¼ allows practically nothing for this valuable asset, and there is also the chance that further quantities of payable ore beyond the reserves will be developed, especially beneath the porphyry dyke, the shares do not appear to be overvalued. This would become quickly apparent should further good discoveries follow the cabled advices published recently reporting the encountering by a borehole from the bottom of the main shaft of ore assaying £4 18*s.* 9*d.* per ton for 1 foot width, and further to the east 2½ feet of ore in the porphyry bar assaying 42*s.* 6*d.*

Tati Company.—In 1914 the old Tati Concessions was reconstructed under the title of the Tati Company, Limited, with a nominal capital of £400,000 in £1 shares; 394,132 shares were issued to old shareholders at 15*s.* per share paid, and the balance of 5*s.* per share has since been paid up. Besides certain mining claims and interests, through shareholdings in mining companies, the Company owns a little over a million acres of land. Recently the announcement was made that it has disposed of 237,000 acres—nearly a quarter of its area—to the Barralong tribe of natives, at an average price of 7*s.* 6*d.* per acre, the purchase consideration to be spread over a period of five years. The total sum to be received will amount to about £80,000, mineral and trading rights over the area being retained by the Company. There are provisions, however, in respect of inability to provide instalments falling due, so the full payment is not altogether a certainty.

MALAYAN TIN DREDGING.

But for the further heavy fall that occurred in the price of tin last year the report of this undertaking for the year to June 30, 1915, would have disclosed a much higher profit compared with the previous year than it does. Owing to the coming into operation of two more dredges, making three working for the greater part of the year, the ground treated in the twelve months to June 30, 1915, amounted to 1,967,790 cubic yards, against only 772,798 cubic yards in 1913-14, and the output, despite a small reduction in the grade of the ground, rose to 503½ tons of tin oxide, against 268¼ tons in the previous year. Working expenses per cubic yard dredged showed reduction in the past year, but the fall in the tin yield per cubic yard dredged just about offset this favourable factor, the working costs per ton of tin oxide for the past year working out at £65 15*s.* 10*d.*, against £65 19*s.* in the preceding twelve months. Consequently, had the same price been obtained for the past year's production as the output of the previous year realised the profit for the past year, owing to the largely increased yardage dealt with, would have reached to over £20,000. However, consequent on the fall in the price of tin, the output of the past year realised only £89 6*s.* 9*d.* per ton of tin oxide, against £101 13*s.* 8*d.* per ton in 1913-14, and as a result the profit of the past year, despite the large increase in the scale of operations, only expanded to £13,134, against £8,428 in the previous twelve months. The following table compares the results in detail and shows the much-improved returns obtained in the first four months of the current financial year owing to the better grade of ground treated and the higher price of the metal:—

Year to June 30	Ground Treated Cub. Yards	Tin Oxide Output Tons	Value £	Working Costs £	Working Profit £
1913 (6 mos.) ...	260,353	112½	14,282	6,879	7,403
1914	772,798	236	23,997	15,569	8,428
1915	1,967,790	503½	44,982	33,116	11,866
1915–16 (4 mos. to Oct. 31)	809,000	268¼	24,442	11,308*	13,134*

Year to June 30	Tin Yield per Cub. Yd. Lb.	Working Cost per Cub. Yd. *d.*	Per Ton of Tin Oxide — Value £ *s.* *d.*	Working Costs £ *s.* *d.*	Working Profit £ *s.* *d.*
1913 (6 mos.) ...	0·97	6·3	126 17 10	61 2 4	65 15 6
1914	0·68	4·7	101 13 8	65 19 0	35 14 8
1915	0·57	4·0	89 6 9	65 15 10	23 10 11
1915–16 (4 mos. to Oct. 31) ...	0·74	3·35*	91 2 8	42 3 3*	48 19 5*

* Before provision for London office charges and depreciation.

Out of the profits of the past year the Company has paid a dividend of 5% on the issued capital of £121,000, the same rate of distribution as in the two previous years. This dividend absorbs £6,050; £5,953—nearly equal to another 5% dividend—representing the freight on the new dredges, has been written off, and the carry-forward is maintained at £6,520. The surplus liquid assets at June 30, 1915, amounted to about £5,900 after payment of the dividend.

The Company is now operating four dredges, and the ground treated for the first four months of the current year has amounted to 809,000 cubic yards, equal to about 2,500,000 cubic yards per annum. In addition there has been an increase in the yield of tin per cubic yard, working costs per cubic yard are slightly lower, and a higher average price has been

obtained for the product than in the past year. Consequently the working profit of the first four months of the current financial year has amounted to £11,308, equal to nearly £49 per ton of tin oxide, against £16,365, or £32 9s. 6d. per ton, in the twelve months to June 30, 1915. Should the price of the metal be maintained at its recent level of about £160 it looks as if the Company for the current year will earn a net profit in the neighbourhood of, say, £40,000, in which case dividends equal to 30% on the capital would be forthcoming. We have shown that the price of the metal is the governing factor, and the future in this respect cannot be foretold. Nevertheless, at the present quotation of 1½, in view of the much-improved results of the current year, the shares do not appear to be overvalued. A further rise in the price of tin—at present quoted at £167 10s.—would, of course, very beneficially affect the Company.

TEKKA, LIMITED.

THE tin output of this Malayan concern for the year ended January 31, 1915, was larger than in any previous year in the Company's history, mainly owing to the substantial increase in the tin yield of the ground treated. But the fall in the price of the metal largely neutralised this beneficial factor, and consequently the working profit of the year ended January 31, 1915, amounting to £25,082, was only slightly larger than that earned in the previous financial year. In the first eight months of the current year the output has fallen very far short of the production of the corresponding half of last year. This will be seen from the following table, which gives a comparison of the operating results obtained in recent years:—

Year ended Jan. 31	Tons Milled	Yield of Tin per Cubic Yard	Working Profit	Dividends Paid
		lb.	£	£
1911 ...	822,872	1·18	39,770	[illegible]
1912 ...	[illegible]	[illegible]	46,599	[illegible]
1913 ...	593,493	1·65	52,854	[illegible]
1914* ...	450,000	1·78	38,917	[illegible]
1915 ...	473,100	[illegible]	25,082	51
1915–16 (8 mos.)	[illegible]	—	—	—

* Estimated. † For [illegible] months.

The dividends paid for the past financial year aggregated 30% on the issued capital of £70,000. For the previous year the shareholders received the same distribution in cash, and in addition 20,000 £1 shares of the Tekka Taiping were divided. In view of the reduction in the current year's output, it looks as if the profit and dividends of the current year will show substantial contraction. For the first nine months of the year three dividends have been paid, aggregating 20%, against 22½% for the same period last year. The price of the £1 shares is £2¾, so that the yield afforded on the reduced rate of dividend is not a high one for the risk involved. Of course, a rise in the price of tin, which at present is at a comparatively low level, would increase the Company's earnings.

OROVILLE AND NECHI.

THE first return published of the Nechi dredge does not come up to official expectations. At the meeting of the Nechi Company on August 28 the Chairman said the dredge was to start on September 1. The Manager had stated it would take a fortnight to dig the pond on the other side of the river from where the dredge was being constructed, but he expected in the last fortnight of September to produce £10,000 of gold. That yield indicated the expectation of the Manager that the ground dredged in the second half of September would be rich. There appears to have been some mistake, however, for no returns have been published in regard to the results of dredging for the six weeks to the middle of October. The first return issued this week for the two weeks to November 1. states that 77,322 cubic yards dredged gave $16,715, which is equal to a yield of 21.3 cents per cubic yard. This compares with an average estimated value of the 90 acres of tested ground belonging to the Company of over 70 cents per cubic yard. An office note appended to the return states: "The dredge is still working in ground of medium value, and cabled advices indicate that it will not have worked its way into the rich ground for about a couple of months." We suppose the Manager was mistaken in expecting to reach the rich ground in September.

Brakpan.—Capital issued, 750,000 £1 shares; 160 stamps. Nine tube mills now working.

WAR FINANCE.

THE NEW VOTE OF CREDIT.

THE Prime Minister this week has asked Parliament for another vote of credit of £400,000,000, bringing the total votes asked for in the current fiscal year to £1,300,000,000, or to a total since the outbreak of war of £1,662,000,000. The manner in which the Prime Minister moved the vote of credit, the manner in which the House of Commons discussed the matter, and the action of the House of Lords in raising the whole question of Governmental expenditures and national economy indicate a much healthier state of affairs, and a much greater degree of enlightenment than was shown when the Chancellor of the Exchequer introduced his Budget in September. Indeed, the discussions in Parliament seem to foreshadow a very great and early improvement in the financial situation now that the position is appreciated and understood. The Prime Minister's statement showed clearly that the condition of the national finances has now become a subject of paramount importance with the Government, and that effective steps will be taken by the Cabinet to check the rapid and disturbing growth in expenditure to an impossible aggregate. Moreover, it is obvious from the speeches delivered, both in the Commons and in the Lords, that Parliament is becoming thoroughly awake, and is not likely to give the Government any further rest or peace until adequate measures have been taken (1) to keep expenditure within the limits of safety, (2) to prevent waste, and (3) to rearrange the economy of the nation so that the existing great adverse balance of trade will be rectified. There is no real difficulty to be overcome in bringing about an equilibrium both in the Government's and in the nation's finances if the necessary steps are taken. All that needs to be done is for the Government to see that the nation gets value for its money; that the aggregate Governmental expenditure is within the capacity of the nation to meet; to tell the country how much money it must provide out of its income; and, lastly, to take measures to induce the country to provide the sum needed. If the Government succeeds in limiting the nation's expenditure to a maximum of £4,500,000 per day, no difficulty should be experienced in meeting this expenditure or in adjusting the trade balance. Of course, if the daily expenditure could be reduced to £4,000,000 per day, the financial problem would become still easier. As we pointed out last week, an expenditure of £4,500,000 per day can be provided as to £1,000,000 out of existing taxation, as to £1,500,000 out of existing savings after taxation has been met, as to about £1,000,000 by foreign credits and by the sale of foreign securities, and, as to the remaining £1,000,000 per day, out of the additional money which the country could easily provide if it realised the necessity of cutting off its luxuries and a certain amount of its comforts.

Now that the question of economy in the Governmental expenditures is being faced, a very great reduction in expenditure will, we are convinced, be effected, and funds will thus be found for the maintenance of the still greater Army now being enlisted and for the purchase of a still greater quantity of munitions without any further increase in expenditure. In fact, the Prime Minister's statement as to all the measures that have been taken to secure economy in the Governmental expenditures, if followed by further measures to induce the nation as a whole to become economical in their expenditures, will give Great Britain all the money she will need to maintain not only her great Navy and to supply her Allies with any reasonable sum of money they may require to pay for goods purchased abroad, but also to maintain, equip, and supply with abundance of ammunition an army which will compare not unfavourably with the armies of the Continental nations.

In taking a much more hopeful view of the financial outlook than hitherto we have felt warranted in holding, we are placing implicit reliance on the assurance of the Prime Minister that as far as possible all wasteful expenditure will be eliminated, and that every item of expenditure will be carefully canvassed, to ascertain if full value is being obtained for the money expended.

There is, however, one statement by the Prime Minister which will doubtless cause a certain amount of uneasiness. The Vote of Credit is based upon an expenditure upon the War of no less than £5,000,000 per day for the next two and a half months. If to this sum be added the interest on Debt and the Civil Service and other expenditures, the sum for which provision is made is not far short of £5,500,000 a day. It is obvious that so great a sum ought not to be expended. For the country to make economies of £1,000,000 a day in order to cover a total daily cost of £4,500,000 would not be beyond its powers, but to make an economy of £2,000,000 per diem to meet an expenditure of £5,500,000 would entail a strain upon its resources that ought not to be contemplated. Therefore we would have preferred that the Prime Minister, in moving the new Vote of Credit, had expressed his intention of keeping the national expenditure within £4,500,000 a day. We realise, however, that in asking for a Vote of £5,000,000 per day for war purposes, the Government merely wished to have ample powers to meet any expenditures that might be incurred, but which they do not expect to incur.

In order that our readers may realise and appreciate what the Government has done and is doing to secure ecenomy we give the following extract from the Prime Minister's speech:—

"I now turn to the Vote which is the subject of discussion. It amounts to £400,000,000. The last Vote which I moved in September was prepared on the assumption that the weekly average and total issues, taking everything into account, would not exceed £35,000,000 per week, or £5,000,000 per day. The figures which I have given will show that during the past weeks the expenditure has been well within that limit. As I have already stated, the expenditure in respect of advances to Foreign Powers is expected to increase, and so also, I am certain, for perfectly legitimate reasons, will the expenditure on munitions. Notwithstanding this, and although it becomes increasingly difficult to forecast the rate of expenditure as the total involved expands, we see no reason at present to suppose that during the next two and a half months the total issues from the Vote of Credit which we are now asking will exceed the figure upon which my last estimate was based—namely, £5,000,000 per day. I will not call it a liberal, but I think it is a safe, estimate of the outside figure the expenditure is likely to reach.

"We now propose to the House a sum at the rate of £5,000,000 per day, which, as far as we can judge, will be sufficient to carry on the public services until about the middle of February of next year. Let me say here that I myself would have been quite prepared to propose a

smaller Vote to the House than the one I am actually submitting which exceeds very considerably any of the Votes of Credit to which the House of Commons has already assented—provided, of course, that we proceed upon the calculated basis of an expenditure of £5,000,000 per day. It is really, I think, a matter of parliamentary convenience whether we should take a Vote now, as the Government are proposing, of £400,000,000, which would carry us on, upon that basis, to the middle of February, or whether we should take a Vote of £50,000,000 or £100,000,000 less, to carry us on to some date in January. Having regard, however, to parliamentary exigencies and parliamentary convenience—there being no question of principle involved in the distinction between the two courses—I am disposed to recommend to the House—though I rather tremble at the figure I am asking—to provide the Government, by means of the Vote of Credit, with the sum which upon our estimate will suffice to carry us on until the middle of February.

"Before I bring my statement to a close and I am purposely to-day at this stage of the discussion confining myself in a very large degree to financial and, indeed, statistical matters—I wish to say one word upon these gigantic and unprecedented figures from the point of view of public economy, and of our national capacity to sustain the burden which we have willingly undertaken, and which we are all resolved to the very last to bear. This is a subject which, though perhaps it will hardly be believed, without any external stimulus or any suggestion from our numerous advisers outside, has engaged the closest attention of the Government for weeks and for months past; and we have had sitting a Committee of the Cabinet for a considerable time now to review, to take into account, the whole of these commitments to discover if they can see possibilities not inconsistent with the maintenance of the efficiency of our services and due prosecution of the War, for saving expenditure, and to suggest expedients and remedies, if such can be found, in that direction.

"The Committee was presided over by my right hon. friend the Chancellor of the Exchequer, and it includes—it has by no means completed its labour—seven Cabinet Ministers and the Financial Secretary to the Treasury. The House may be quite assured, and I give them the assurance, that this Committee in the course of its investigations has considered, and is considering, the possibility of economy in every branch of our expenditure, particularly the expenditure upon the Army and the Navy. They have already made recommendations in that direction, and there are two or three points particularly connected with the Army I should like to indicate to the House. It has been suggested, as the result of the investigations of this Committee, that money might be saved in regard to the Army by a closer examination of contract prices, by revising the scale of Army rations, and by sending back to civil employment men found unfit for active service, either permanently or for long periods. Action has already been taken, and is being taken in all these directions."

Not the least interesting part of Mr. Asquith's illuminating statement was the information he gave to the House as to the existing composition of the General Staff of the War Office. The head of the General Staff is now Lieut.-Colonel Sir Archibald Murray, who has made a great reputation for himself as Chief of the Staff on General Sir John French's staff.

For the purpose of showing how the daily war expenditures have increased we tabulate the information given by Mr. Asquith:—

Daily War Expenditure.

	£
April 1 to June 30	2,700,000
July 1 to July 17	3,000,000
July 18 to Sept. 11	3,500,000
Sept. 12 to Nov. 6	4,350,000

* Interest, Civil and other Services have averaged £16,000 per day throughout the period.

Below we set out details of the nation's Governmental expenditures from April 1 to November 6, according to the additional information furnished by the Prime Minister:—

April 1 to November 6.

	£
Army, Navy, and Munitions	517,300,000
Bank of England repaid	104,000,000
Loans to Allies	58,900,000
Loans to Dominions	39,400,000
Food Supplies and Miscellaneous Charges ..	23,500,000
Total War Expenditure	743,100,000
Civil Service, &c.	46,393,000
Permanent Charge of Debt	16,560,000
Interest on War Debt	6,140,000
Road Improvement Fund	694,000
Payments to Local Taxation	5,138,000
Other Consolidate Fund Services	1,193,000
Total other than War	76,118,000
Aggregate	819,218,000

THE CABINET AND ITS REFORM.

For some time past a carping criticism has been practised in regard to the Government which goes far beyond what is expedient. It is quite right that Ministers should be criticised when they do anything which seems to call for criticism. But we should all bear in mind, at the same time, that in war it is not possible for Ministers always to justify their actions. They may find, or at all events believe, it to be their duty to take certain action which to their critics may appear injudicious, or even altogether wrong. And yet the Government may feel that it would be a dereliction of duty if they were to state plainly why they took the action complained of. Therefore, in a time of war it clearly is the duty of the public to give support to the Government wherever possible, and when criticism is almost forced upon an organ of public opinion, to express that criticism so judiciously that it shall not make a false impression abroad, or lead to suspicion either at home or abroad that the people are divided amongst themselves. One of the complaints which has been a great deal harped upon is that the Cabinet is altogether too large. The explanation, no doubt, is that in order to establish a Coalition Government it has been found necessary to include many more persons than a careful regard for the speed and the efficiency of Cabinet action would advise. The critics, then, ought to remember that they themselves assisted very largely in bringing about the state of things of which they complain, for they were amongst the loudest to clamour for a Coalition Government. The Coalition Government now being in office, they are just as little satisfied as they were before, and they are crying out loudly that the Coalition Cabinet is too numerous. A Committee of the Cabinet has now been appointed for the express purpose of conducting the War. The five gentlemen composing the Committee are Mr. Asquith, Mr. Bonar Law, Mr. Lloyd George, Mr. Balfour, and Mr. McKenna. It seems to us that the step is a wise one, and that it ought to facilitate a more efficient control of the War. Yet if we are wise we will not expect too much from a change of the kind. Everybody who has had experience in administration of any kind by a board of any form have learned that a very numerous body is exceedingly likely to be divided in opinion and to be difficult to induce to come to a decision. Twenty-two gentlemen seated round a table would each of them probably have a view of his own, and if each one is to put forward his view in full it is plain that despatch of business will not be the result. A very small body, then, is much more likely to decide quickly than a large body. But quickness of decision is not by any means the greatest merit on the part of an administrative body. Every person with experience knows that one man sometimes get undue control over a board, and that practically what is done is the

action of one man, but the reasoned decision of a number of able men. Whether the new change will prove to be as beneficial as is expected will depend, then, upon the spirit in which the new Committee takes up its functions. Assuming, as we trust we may, that the Committee undertake their new duties in the right spirit, then they will soon attract to themselves the confidence of the country. For what is really wanted is the knowledge that a few really capable men are entrusted with the control of the War, and will recognise that everything else must be subordinate to that first requisite.

Some of the more crotchety critics have not been satisfied with demanding a much smaller inner Cabinet to conduct the War, but have insisted that even that inner Cabinet should be guided entirely by its expert advisers. We are glad to find that that mischievous suggestion has been rejected. The government of the country is vested in the Cabinet so long as the Cabinet has the confidence of the people. If the Cabinet has lost confidence, let the House of Commons show that it has, and put another Cabinet in its place. But as long as the country desires that the present Cabinet shall continue, then it is clear that the present Cabinet must decide. We have all put our confidence in the existing Government, and to that Government we look for the wise measures which are to bring the enemy to his knees. Of course, every wise Minister will be most anxious to have the best expert advice he can get. It is inconceivable that Ministers should decide, say, upon the attempt to force the Dardanelles, or the action to be taken to defend Serbia, without consulting the very best naval and military authorities. The Prime Minister has exploded the fiction that Mr. Churchill on his own authority ordered the naval attack upon the Dardanelles. How anybody of experience and common sense could have believed such a fiction passes our comprehension. Every Minister, then, whether he is acting in the full Cabinet or in the War Cabinet, will be most eager to get the fullest and the frankest expression of opinion from the naval and military advisers. But our readers need not be told that experts are themselves usually divided on all great questions. It is the general opinion that Lord Fisher disapproved of the attack upon the Dardanelles by the Fleet alone. From what was said by Mr. Asquith, it appears to be certain that Lord Kitchener was in favour of the attack, though at the time he could not afford an Army to support it. There is no question that the Admiral in command on the spot was in favour of a naval attack. We have the certainty, therefore, that some experts of great experience were in favour of what was done, and we have at all events grounds for believing that other experts were opposed to it. That being so, it is clearly impossible to act on the advice of experts alone, even if it were advisable. But it is not advisable. The Ministers, if they are fit for their places, ought to be able to judge, after a full and careful inquiry from their expert advisers, what course they ought to adopt; and they ought to take that course on the strength of their own convictions, and not merely because it is suggested by advisers. Such a course, in fact, as some of the critics of the Government advise, would be mischievous in the extreme. The Cabinet would be supposed by the nation to have decided upon a certain course, whereas in actual fact the Cabinet would have surrendered their own judgment to the majority of their expert advisers. In other words, we should be governed not by those whom Parliament is prepared to support, but by certain experts of whom the great majority of us know practically nothing. In a democratic Government such as ours there are no means consistent with honour and duty of delegating power. A Minister, if he feels strongly upon any point, and is overruled, may very properly resign. But for a whole Cabinet to give up its own opinion because some of its expert advisers hold some other opinion, would be a gross dereliction of duty.

THE AMERICAN NOTE.

The militarist and sensationalist Press is writing at present about the last American Note addressed to this country in a tone that is strongly to be deprecated. It is never to be lost sight of by those who wish to understand the attitude of neutrals and belligerents in the present great struggle that there are rights upon both sides, and that it is desirable that the belligerents should not only understand, but should respect, the rights of neutrals, as it is equally desirable that neutrals should understand and respect the rights of belligerents. In the portion of the Press to which we have just referred this view of the matter is completely ignored, and a spirit is displayed which, if it had as much effect as manifestly is intended, might materially extend the deplorable struggle in which we are engaged. Broadly speaking, in peace time every nation has the right to trade with every other nation; and as, happily, in our own day wars are only occasional misfortunes, while peace prevails for most of the time, peoples come to regard their right to conduct their trade without interference by anybody as indefeasible. Unfortunately, it is not so. As soon as war breaks out the several belligerents naturally desire to bring the conflict to an end as soon as possible, and one very effectual way of doing that is to prevent—or, at all events, to restrict—the trade of the enemy as much as they can. As every country may become a belligerent, all countries recognise that this natural desire is one that must be respected. And, therefore, neutrals consent that their own trade shall be more or less inconvenienced so as to permit belligerents to bring the state of war as quickly as possible to an end. A great many rules have been devised and accepted with the object of limiting as much as reasonably can be done the powers of belligerents at sea, while safeguarding the interests of neutrals. But when everything is done it is inevitable that neutrals must suffer more or less from blockades and their accessories. As it happens, the British Empire at the present moment possesses a navy beyond all comparison greater than any other Power in the world. Consequently, the British Government is able to harass the enemy's trade to an unprecedented extent—practically to drive the enemy's ships off the seas, and to make it difficult for even neutrals to trade with the enemy. Under such circumstances it is inevitable that acts should be committed every now and then which give rise to complaints from neutrals. There may be the most honest desire on the part of the most powerful maritime State to do nothing unfair to neutrals. Yet neutrals, finding their business cabined and cribbed, naturally complain. The circumstances being such, it is obviously the duty of belligerents and of neutrals to do everything possible to avoid heated discussions: to settle such matters as arise in a fair and friendly spirit; and to avoid doing anything which manifestly would be injurious to the superior maritime Power. We must always bear in mind that it is the interest of neutrals not to cripple belligerent rights too much, just as it is equally the interest of belligerents not to cripple neutral rights too much. For example, it is a very long time since, before the present conflict, the British Government has been at war with any great Power. During that time it has been a neutral, and it clearly has been its interest that neutral rights should be respected. When this War is over we all earnestly hope that we shall enjoy a still longer period of profound peace. Then we shall be neutrals if wars arise, and it will be our interest that neutral rights of every kind should be respected. On the other hand, such a Power as the United States, for example, may be involved in war quite without any aggressive designs on its part. If such should be the case, it would be desirable for the United States that belligerent rights should not have [illegible] become the interest of England to see neutral rights

fully respected, just as it may become the interest of the United States to see belligerent rights fully acknowledged. The real true interest of all parties, then, is for belligerents to respect the rights of neutrals, and for neutrals not to prevent belligerents from adopting what are acknowledged to be belligerent rights, and so bringing the War to an early conclusion. We trust, then, that the tone of the militarist and sensationalist Press will not be imitated by the rest of the Press of this country; that in all discussions of the American Note the rights of America will be fully recognised; and that we shall all show ourselves anxious to meet in the friendliest spirit the Americans on all points where they are right.

THE CONDUCT OF THE WAR BY THE ALLIES.

The Government has not given much information respecting the business which has taken Lord Kitchener from the War Office at this critical moment, and we hold that the Government has acted wisely. We believe that a Government ought to give every information which will not assist the enemy, and that in a democratic country like our own it is more important than elsewhere that such information should be given freely and fully. But where a Government believes that information might help the enemy it is its duty not to make public that information. We assume that the Government is convinced that it ought to keep silent at present. Therefore we shall not ourselves even attempt to guess what the duty is upon which Lord Kitchener has been despatched, or how long he will find it necessary to absent himself from London. It is enough that he has been requested by his colleagues in general to go on a mission. We are bound, as long as we have confidence in the Ministry, to believe that they have not sent him from the country without exceedingly good grounds for doing so. Meanwhile, measures are being taken which ought to have been taken long ago, and which, we sincerely trust, will greatly quicken the successful termination of the War. It has always been the objection to war alliances that a thorough understanding between the various Allies is impossible, and, consequently, that really common action is impracticable. In the present war it is often objected that while the Entente Allies have not agreed upon any common course of action, the Central European Empires have, and thereby have possessed a great advantage over their antagonists. In a sense the statement is true. But we are not quite so sure that the benefit to the Central European Powers is as great as it appears. Germany for more than half a century has been preparing for the great struggle into which she plunged fifteen months ago. But Germany was a country which had been prepared by State Socialism, by State Socialism applied to education, and by an exceedingly competent educational system, to make her preparations even though they involved great inconvenience to her people and the expenditure of vast sums of money. Germany, at the same time, was able to get control of Austria-Hungary. Austria-Hungary, at the time of the Crimean war, mortally wounded Russia, and she feared that she never would be forgiven. Therefore, although in 1866 Austria was driven by Prussia out of the Germanic Confederation, yet Austria deemed it wiser and safer to ally herself with Prussia than with Russia. She made up her mind most deliberately, and as the Hapsburg Monarchy consists of two practically independent parts—Austria and Hungary—Germany knew that she could count upon the Magyars, and, therefore, that whatever hostilities might exist in Austria would be overcome. The result was that an alliance was concluded between Germany and Austria-Hungary which, in effect, bound the hands of the Emperor Francis Joseph and made Germany practically master of the Dual Monarchy. When the War broke out which Germany took so long a time to prepare for, the Emperor Francis Joseph was a very old man, broken by misfortunes of many kinds. His heir had just been murdered, and his new heir was without experience and without authority. Practically, therefore, Austria-Hungary was dependent upon Germany, and whether dependants of that kind are a real advantage to Germany is a question which experience will determine before very long. Whatever the verdict may be, it is certain that Germany was sure of Austria; that she could count thoroughly upon the Magyars; and thoroughly also upon the military clique. But the Hapsburg Monarchy is a mere congeries of warring nationalities, and the first great disaster that befalls Austrian arms will dispel many a fancy that now rules all over the world.

Meanwhile, Germany saw some of her arrangements go awry. She had not only concluded a close treaty with Austria-Hungary, but she had attached Italy also to herself. Yet as soon as Germany declared war Italy refused to draw the sword on her behalf, and Italy now is fighting Austria. If, then, Germany has had the advantage of being able to control at will the land and sea forces of Austria-Hungary, she has, on the other hand, had the disappointment of seeing the third member of the Triple Alliance break away from her and join the Entente Powers. It is said in answer to all this that Germany, at all events, has been able to dispose of the Austrian armies and navies almost as completely as of her own, while the Entente Powers have not acted upon any common policy, and do not seem even to have seriously consulted how best they could support one another. That is a kind of assertion which is exceedingly easy to make, but which it is impossible to prove, and which cannot be effectually disproved until the War is over. As a matter of fact, both parties in the United Kingdom had decided that they would not engage in a great land war with any considerable number of men. Lord Haldane, in accordance with dictates laid down by Mr. Balfour when he was Prime Minister, gave the country an Expeditionary Force of about 150,000 men. But he refused to increase that Force largely, and he based his policy upon the strength of the British Navy. As we were not in a position to send to the assistance of our Allies more than about 150,000 men, it would have been absurd to have asked for any important position in the Alliance. We could, and we did, serve France very effectually in August and September of last year. But we could not claim a potent voice in determining the war policy when our Army was so small. Similarly, we could not expect that Russia would subordinate what seemed to her her greatest interest simply out of regard for our views. We were not in a position to play the part which Germany has played in her sphere. And it is only now that we are coming into the position in which we can aim at such a reconstruction. It is matter of common notoriety that General Joffre last week visited London, and had long and serious consultations with Lord Kitchener. It is also common knowledge that Lord Kitchener immediately after visited Paris, and again had long and important consultations with General Joffre. It is, of course, not certain, for we have not full and definite official explanations. But enough has been said by the Prime Minister to justify us in concluding that, so far at all events as France is concerned, we are making arrangements by which the naval and military policy of the two Powers will be determined by common consent. It is a very remarkable outcome of the fighting of the past fifteen months; and it gives proof of the clearness of judgment of the French authorities and their stern determination to fight the War out until the arrogant enemy is struck down who aimed at destroying France. Already our Government has induced the other Allied Governments not to put up money rates against one another by competing for loans in the world's Money markets. England has undertaken to

borrow the larger part of the moneys, so that everything financially necessary should be provided. That is one of the reasons why our expenditure upon the War is so enormously greater than the expenditure of our Allies. But it is only so temporarily, for the moneys lent by England will become the debts of our Allies, and sooner or later the whole burden will be proportionately borne.

It is better not to speculate as to what Russia and Italy will do. The example set by France and England will, no doubt, bear fruit. But we are content to wait until it suits those Powers to announce the policy they have decided upon. It is a matter for very general congratulation that England and France have come to recognise that in this War their interests are one; that each can best serve its own real interests by acting loyally with the other; by consulting beforehand upon every important subject; and by preferring the common interest to what may seem the more immediately pressing interest of one or other. Meanwhile, there is a general feeling that the less said about the operations in the Balkans the better. That England and France are both giving Serbia assistance is certain. And that other measures are being taken admits of no doubt. But as none of the Governments think it wise to show their hands just at present every good journalist will conclude that the less he speculates the better it will be. Serbia must be helped as far as we can help her. And whatever misfortunes overtake her, she will have to be restored to independence and rewarded for all she has suffered. But what is to be done immediately we do not know, and the Government does not think it wise to tell. Therefore, good subjects will leave it to those concerned to bide their time before they make any announcement. We know that England and France practically have renounced separate action, and have pledged themselves to take counsel with one another on every future step. We hope that something of the same kind, as far as circumstances permit, will be done by both Russia and Italy. But for the time being we must rest content with such knowledge as we have, hoping that now that winter has set in in earnest the Germans will not be in a position to push their adventures very far. Everybody knows what the Russian winter means, and how little, therefore, either the Germans or the Austrians can bear operations in the midst of the winter. Meanwhile, Russia is receiving such a prolongation of time for preparation as ought to put her in a position to deal satisfactorily with the enemy. During the next few months Germany can do little. Russia can receive immense supplies of every kind; and when the spring sets in she ought to be able to give a good account of the enemy within her borders.

THE COST OF LIVING.

OUR INDEX-NUMBER OF PRICES.

At the end of last year and early this year the prices of commodities steadily advanced until from 81.2—the index number for June 1914—107.2 was reached in May 1915. In June and July last there was a setback in prices due to heavy sales by the Government of produce bought in previous months. The Government's purchases were largely responsible for the great rise in prices that took place up to May, and the world's great consumption prevented any appreciable decline in prices when the Government became a seller of foodstuffs instead of a buyer. But since July prices have again risen, and from 106.4 the index-number rose to 107.8 in September, and it has now further advanced to 110, the highest figure reached since 1873, when the number was 111.

The further advance last month to a figure that very nearly approaches the 1873 level is shown by the following statement of The Statist's index-numbers of the prices of 45 commodities, the average for the 11 years 1867-77 being 100:—

Annual Numbers.		*Monthly Numbers.*	
Period	Average	Month	Index No.
1873	111	June 1914	81.2
1878-87	79	July 1914	82.4
1890-99	66	August 1914	87.9
1905-14	79	September 1914 ...	89.3
1880	88	October 1914 ...	89.8
1896	61	November 1914 ...	88.8
1905	72	December 1914 ...	91.6
1906	77	January 1915 ...	96.4
1907	80	February 1915 ...	100.9
1908	73	March 1915	103.7
1909	74	April 1915	105.9
1910	78	May 1915	107.2
1911	80	June and July 1915...	106.4
1912	85	August 1915	107.0
1913	85	September 1915 ...	107.8
1914	86	October 1915 ...	110.0

The advance last month was due to a further rise in prices of cereal foods, of minerals, textiles, and sundry materials. In some measure these advances were counteracted by a substantial fall in animal food and a slight fall in sugar and tea.

Since war began the advance in vegetable food has been 66%, in animal food rather less than 27%, in sugar, coffee and tea 30.7%, in minerals 28%, in textiles 24%, and in sundries 39%.

Comparison of the prices of the various classes last month with previous periods is made below:—

	Veg. Food (Corn, &c.)	Animal Food (Meat & Butter)	Sugar, Coffee & Tea	Minerals	Textiles	Sundries
Year 1873 ...	106	109	106	141	103	106
Aver. 1878–87 ...	79	95	76	73	71	81
„ 1890–99 ...	61	80	63	71	56	66
„ 1905–14 ...	70	92	53	97	75	78
June 1914 ...	66.5	97.5	51.8	96.7	80.6	82.5
May 1915 ...	110·1	134.5	72.0	119.6	86.5	107.5
June „ ...	103.0	127.5	73·4	126.6	90.6	106.2
July „ ...	105.4	130.3	72.9	121.2	89.6	107.1

Combining vegetable food and animal food, we find there was a rise of 1% in prices in October, while the advance in the prices of materials was 2.9%. Since war began the advance in foodstuffs has been 42% and in materials 31.5%.

Taking articles of food and materials separately, the index-numbers for last month compare thus (1866-77 = 100 in both cases):—

	Food-stuffs	Materials
Year 1873 ...	107	114

Silver has been firm, and the price rose to 24 1/16*d.* in consequence partly of small supplies and partly of a general demand not only from the Continent but also from the East.

The price and index-number of silver for last month compare as follows (60.84*d.* per oz. being the parity of 1 gold to 15½ silver=100):—

	Price *d.*	Index-No.
Average 1890-99	34	= 55.8
Average 1905-14	26 11/16	= 43.9
Average 1893 ...	35 5/8	= 58.6
Average 1909 ...	23 11/16	= 38.9
Average 1914 ...	25 1/16	= 41.6
Lowest, Nov. 1902	21 11/16	= 35.6

End of	Price *d.*	Index No.
Dec. 1906 ...	32 5/16	= 53.1
June 1914 ...	26	= 42.7
Oct. 1914 ...	22 3/16	= 36.5
Dec. 1914 ...	22 11/16	= 37.3
Sept. 1915 ...	23 1/4	= 39 0
Oct. 1915 ...	24 1/16	= 39.6

Gold has continued to be exported on a great scale, notwithstanding the sale by Great Britain of a large amount of American securities and the creation of an Anglo-French loan in the United States for £100,000,000. This has been due to the adverse trade balance arising from our enormous purchases of foreign goods, the smallness of our exports, and the substantial advances which Great Britain is making to her Allies and Colonies.

OUR GREAT IMPORTS.

A CERTAIN amount of satisfaction has been expressed that the value of our imports in October has been no more than £67,792,000, in comparison with £70,293,000 in September and as much as £76,117,000 in July, and inferences have been made that this decline indicates greater economy in consumption in this country. One wishes that one could take this view of the matter, but unfortunately the facts do not altogether square with the theory. The decline in our imports in October was due in part to the lightness of our imports of wheat and flour, the quantity of wheat imported being only 5,000,000 cwt., against nearly 8,000,000 cwt. two years ago, and the quantity of flour imported being no more than 829,000 cwt., against 1,235,000 cwt. in October 1913. Now, the drop in our wheat and flour imports has not been due to economy. It arises from the fact that American farmers and dealers in wheat expect to sell this year's crops at higher prices than have recently been current, and have been holding back supplies. Last year the financial pressure in all the wheat-growing countries forced wheat upon the market early, but this year there is no financial pressure in those countries; indeed, the prosperity of farmers is so great owing to the high prices at which they have sold their last year's crop and at which they are able to sell this year's crop also, that they are exceptionally well able to hold their crops for a time if they regard prices as unsatisfactory. We notice that the Board of Trade has assumed that the small imports of wheat recently was due to the difficulty of obtaining charters for the carriage of wheat, and that it has commandeered ships to carry wheat. If the Board of Trade will look into the matter more closely we think they will find that the recent small arrivals of wheat here arise not only from the dearth of shipping, the seriousness of which we recognise, but also from the abundance of money in the agricultural countries, and to the consequent ability of the farmers in those countries to hold their wheat for what they now regard as satisfactory prices. The world's grain crops of this year are very large, but after a moderate fall in September prices in October have fully recovered. The small arrivals of wheat in October were in face of the fact that Russia is now exporting goods, including wheat, much more freely than it had done since the Dardanelles were closed. Our purchases of Russian wheat during October have amounted to 242,000 cwt., against only 61,500 cwt. in 1914 and 923,000 cwt. in 1913. The smallness of the arrivals so far in the current crop season will doubtless be made good in later months, but it is evident that the contraction of imports in October was not due to any falling off in the demand or in consumption in this country, but to the fact that supplies were held back for higher prices and to the shortage of shipping.

The shrinkage in imports has unfortunately been attended by some contraction in exports. In October the value of the exports was £31,969,000, in comparison with £32,308,000 in September and £34,721,000 in July. We regard this shrinkage of £3,000,000 in the value of our exports since July as a much more important matter than the contraction in our imports. Having regard to the greatness of our imports, it is of very great importance that our exports should be maintained. The course of our imports and exports in recent months will be evident from the following statement:—

Foreign Trade of United Kingdom (000's omitted).

For the 10 months the value of our imports has been nearly £712,000,000. Of this total, £83,000,000 has been re-exported, so that our net imports have reached £629,000,000. Exports of British goods in this period have been £315,000,000. Thus the imports have exceeded the exports by £314,000,000. By the end of the year the excess of imports over exports seems likely to be about £375,000,000.

At the present time there are two matters of great moment concerning our foreign trade demanding attention. The first is how far we are able to pay for our great imports by means of our exports, and the second is from which countries we are buying more freely than we are selling, and how is the difference to be settled. In considering these matters it is essential to note that the value of our foreign trade as given in the Board of Trade Returns is not the total value, as it does not include certain goods which at the time of importation were the property of H.M. Government, and, further, the accounts of goods exported do not include goods taken from British Government stores and depôts, or goods bought by H.M. Government and shipped on Government vessels. It will be realised, of course, that as far as goods are bought by H.M. Government and shipped on Government vessels to the British Forces abroad, these are really goods for home consumption and should be *excluded* from our exports; on the other hand, goods imported by the Government for consumption here or by our armies should be *included* in our imports for consumption. The amount of goods exported from Government stores to Allied nations not for use by the British armies are, of course, an export; but it is obvious that the amount of such goods is not appreciable. Roughly speaking, an item of about £20,000,000 per month should be added to the amount of our imports in respect of goods imported by the Government, or in respect of goods purchased on behalf of the Government in other countries for consumption by the British armies and fleets abroad. In other words, the total value of our imports in October was not £68,000,000, but £88,000,000, and the excess of imports over

exports for the month were £29,000,000, but about £49,000,000. This adjustment is not only necessary when considering the monthly total, but is also essential in considering the amount of money owing by this country to other nations. It is, however, impossible to allocate the £20,000,000 a month of the Government's foreign purchases and foreign payments to individual countries, and in dealing with our balances with individual countries we have been compelled to exclude it.

The following statement shows the value of the goods imported from individual countries in the first nine months of the year, and reveals the greatness of our purchases from the agricultural countries, more especially the United States, Australasia, India, and Argentina:—

Imports of Merchandise by Principal Countries

The comparison of the exports of the produce and manufactures of the United Kingdom for the nine months is very different from the comparison of our imports, and, with the exception of France, to whom we have sent a very large quantity of goods, and of Holland, Norway, and Denmark, to whom we have also sent additional goods, our exports to the world have shown very serious decline. The comparison of our exports in the first nine months of 1915 with the corresponding period of 1913 is as follows:

Exports of Produce and Manufactures of U.K.
(000's *omitted*).

Principal Countries to which Consigned	Nine months to Sept. 30 1915 £	1914 £	1913 £	+ or — 1915 on 1913 £

	[illegible]	76,874	82,454	6,786

In any endeavour to arrive at the extent of our obligations to individual countries it is necessary to take into account, not only the exports of our own goods, but our exports of foreign and colonial goods. It is true that we have to settle for the goods re-exported with the countries from which they are imported; nevertheless, when all countries are taken the matter is adjusted.

In the first nine months of the year our purchases

from the United States were of the value of no less than £137,000,000, in comparison with only £50,000,000 in the corresponding nine months of 1913—an increase of no less than £87,000,000. This is apart from any goods bought from the United States which at the time of importation here were the property of H.M. Government. And with this great expansion in our net imports from the United States our ability to pay for them by services has declined. Normally the large quantity of goods that comes here on balance from America is sent to pay interest on European capital in the United States and to provide for the expenditures of American tourists. This year, however, the number of American tourists visiting Europe has been very small; and consequently we have had to pay for the goods not by supplying tourists with the goods and services they required on this side directly and indirectly, but by remitting gold and selling securities to the United States. Including the payments that have been made for Government stores, Great Britain has sent to the United States in the first nine months of this year a long way over £100,000,000 of money in gold and securities. Of course, normally America sends to this country a substantial amount of securities in addition to the goods she sells to us, in order to pay for the goods she buys from us, the expenditures of its tourists, and the liberal gifts which the American people make to their friends in Europe.

The situation with regard to Argentina also is remarkable. In 1913 our net imports from Argentina were £16,718,000. This sum was not nearly sufficient to provide for the country's foreign payments for interest and services. Normally, of course, Argentina sells a large quantity of goods to London with which to pay for goods purchased in the United States and other countries, and the amount of money that had to be remitted to London for this purpose was not only the sum of about £17,000,000 indicated by the excess of our imports from that country over our exports, but included nearly £20,000,000 of securities sent here to pay for goods and services supplied as capital. In the past year our imports of goods from Argentina have exceeded our exports to that country by no less than £42,000,000, and by means of goods thus sold Argentina has obtained the power to buy a much greater quantity of goods from the United States. Argentina's purchases from this country in consequence of our inability to supply her with coal, iron, and the other things she needs have declined over £8,000,000, while we have bought an additional £17,000,000 of Argentine produce in comparison with 1913.

The situation with regard to Australasia is very similar. In 1913 our excess of imports from over our exports to our great colony was less than £9,000,000; this year it has been over £32,000,000, an expansion of £30,000,000 in our imports having been attended by a decline of £5,000,000 in our exports.

The situation with regard to India is particularly striking. With an expansion of £17,000,000 in our imports our exports have declined no less than £19,000,000, and whereas in 1913 our exports to India exceeded our imports by £16,000,000, in the current year imports exceed exports by £19,000,000, a difference of no less than £35,000,000.

Very much the same conditions are reflected by our trade with Canada. In 1913 our imports just about balanced our exports to Canada, but in the past nine months, in comparison with 1913, our imports have expanded £6,000,000 in spite of Canada's small crop last year, and our exports have declined nearly £9,000,000, so that our net imports from Canada have amounted to over £16,000,000. In the coming year, with a great Canadian wheat crop, the excess of imports from Canada will probably be two or three times this sum.

Space prevents us from referring to our trade balance with every country in the world, but we might point out that as regards Japan our imports this year have exceeded our exports by over £3,000,000, whereas in 1913 our exports exceeded our imports by nearly £9,000,000. With these comments we leave the following instructive comparison of our trade balance with individual countries in the first nine months of this year in comparison with the corresponding period of 1913 to tell its own tale:—

Excess of Imports.

Excess of Imports	Nine months to Sept. 30—1915 £	1913 £	Inc. or Dec. in Balance of Trade against U.K. £
United States	136,777,000	50,077,000	- 86,700,000

* Excess of exports.

CITIES SERVICE COMPANY.—It will be noticed from the advertisement that appears elsewhere that the Cities Service Company has entered into an arrangement for the sale of $5,000,000 of Preferred stock and $2,500,000 of Common stock. For the purpose it has secured the active co-operation of a syndicate of American interests which has purchased the capital necessary to retire the Service Company's floating debt and leave ample cash working capital.

PENINSULAR AND ORIENTAL STEAM NAVIGATION.—Dividend on Deferred stock of 5% for the past six months, together with a bonus at the rate of 5%, both free of tax, making a total distribution on the Deferred stock of 15% for the year.

For over a Century the Claims paid under Whole-life Policies have, on the average, been more than

Doubled

in amount by addition of Bonuses.

Financial Notes.

Mr. J. S. Williams, Comptroller of the United States Currency, has issued a circular letter to the banks directing their attention to the provisions of the law against usury, and requiring that the letter be inscribed upon the minutes of the board of directors of each bank and copies sent to absent directors. In this letter Mr. Williams states: "The real brutality and horror of it develop in the more remote districts, in small communities of agricultural districts, having but one bank, or in which two or three banks combine to maintain rates on money. Some reports from the South and West, the North-West, and the South-West, especially in the wheat and cotton sections of the South-West, are blood-curdling. They are like the stories from darkest Russia, of the oppressions inflicted on the peasantry; like the ghastly history of the wrongs done the French country people by the old nobility."

One authority, commenting upon this letter, does not venture to dispute the accuracy of the charges made by Mr. Williams. But it alleges that they are done only by the very small banks, and that they resemble rather pawnbrokering than actual banking transactions. Mr. Williams, in fact, seems himself to imply as much, for he tells us: "Here is a loan of $109 to a woman for 30 days; charges for interest, $10=120%. Others are, $380 for 90 days, interest $30, or 34%. . . I thought we had reached the limit when we found a National Bank reporting a loan at 360%; but on this paper is a record of a loan by a National Bank of $3.50 to a woman for six days, with an interest charge of $1, which figures out about 6% a day, or 2,400% per annum."

Mr. Williams has also addressed a letter to the institutions under his jurisdiction calling attention to the oath which the directors are required to take binding them against committing any violations of the provisions of the National Bank Act. The letter also sets out the provisions of the Act limiting the rate of interest a bank may charge on loans to the rate allowed by the State.

Mr. Burleson, United States Postmaster-General, has suspended postal money order exchanges between the United States and Greece pending the negotiation of a new postal convention between the two countries. The action has resulted from the refusal of Greece to accept French exchange in payment of money order balances. The money order convention between the United States and Greece provided for payment by exchange on Paris in gold. The Greek Government has demanded strict conformity to this requirement; but French gold cannot be purchased in New York, hence the suspension of the convention.

A world-wide campaign for the development of foreign trade by the United States is indicated in the estimates of the expenditure of the Department of Commerce for the coming fiscal year. It is stated that through the Bureau of Foreign and Domestic Commerce it is the purpose of the Department to aid American merchants and manufacturers in taking advantage of the opportunities now before them and in preparing for the contest for trade supremacy which is expected to develop on the conclusion of the European war.

In a Financial Note last week we stated that negotiations are on foot for enabling Salvador to pay the coupons which fell due in August last. This was not correct. The negotiations which are now going on are with a view to funding the debt.

SOUTHERN PACIFIC COMPANY.

IMPROVED OUTLOOK.

After having passed through several years of relative trade depression, the Southern Pacific seems to have entered upon a fresh period of prosperity. This great system of about 11,000 miles ranks among the strongest railroads of the United States, both from the financial and physical standpoints. Ever since 1907 regular dividends of 6% have been forthcoming. That it was possible to maintain this rate of distribution even in years when a setback in the West curtailed earnings and profits was due in the main to the great wisdom displayed by the late Mr. E. H. Harriman, who, from the time control was purchased by the Union Pacific, devoted his energies to building up a first-class property before giving any thought to the payment of dividends. What the Southern Pacific is to-day is what the Union Pacific has made it, and it is no exaggeration to say that had it not been for the conservative management enjoyed during the *régime* of the Union Pacific, and continued since by Mr. Kruttschnitt, the setback in earnings in the last two years would not have been accompanied by the maintenance of 6% dividends.

The twelve months to June last, with their troubles and trials, followed a year when, owing to a variety of causes, economic conditions in the Pacific States were adverse, and when the traffic and earnings of the Southern Pacific had already appreciably declined. But whereas the falling off in earnings in 1913-14 was accompanied by rising expenses, the decline in receipts in 1914-15 was attended by a considerable reduction in working costs, and the shrinkage in net earnings was not great having regard to all the circumstances. The outbreak of war was keenly felt in the West, and it caused economy by everyone and stopped enterprise. Further, competition became intensified by the opening of the Panama Canal in August 1914, a considerable volume of traffic having been diverted to the new water route that was formerly shipped over transcontinental roads. The Company's lines serve many important copper mines, some of which were entirely closed down for several months, while others were operated at only about 50% of normal capacity. The practical abandonment of new railroad construction work and the depression in the building industry generally resulted in a material decrease in the lumber traffic. Passenger receipts also were down, the reduction here having been assisted by automobile competition, which has been encouraged and rapidly developed by the construction of improved highways by the Western States.

There were, however, two bright spots in the past [illegible]—namely, the advantage derived from the large crops gathered in 1914, and the benefit obtained from the considerable passenger-travel to the West, more particularly in connection with the great Panama-Pacific Exhibition at San Francisco, and the visit to the Pacific States of tourists who would have spent their vacation in Europe but for the War.

In the [illegible] gross receipts declined $8,654,000, or 6.25%; but, inasmuch as there was a decrease of $5,908,000, or 6.31%, in operating expenses, the diminution in the net receipts was $2,797,000 [illegible]. Nearly $800,000 less was needed for taxes, and, after allowing for miscellaneous income and the payment of interest and other charges and sinking fund contributions, the net profit was $1,088,000 lower at $19,869,000. This sum was equal to 7.29% upon the stock, and compares with 7.69% earned for 1913-14 and 9.88% earned two years ago. The net effect of the two years of adversity has been to reduce the profit earned by $7,078,000. In spite of this, however, the surplus profit last year, after paying the usual 6% dividend, was $3,508,000. How the results obtained for last year compare with those for former periods will be evident from the Income Statement given herewith.

But for abnormal expenses, the net receipts would have shown increase, despite the falling-off in gross receipts. Among the additional burdens of operating was included the higher price which the Company paid for fuel, which accounted for an increased outlay of $765,000. Further, almost $1,200,000 of additional expenditure was incurred, in order to comply with a revised classification of the Interstate Commerce Commission by which the Company was required to charge to operating expenses the depreciation portion of rental paid for equipment which previously had been charged to income account.

The policy of the management has always been to spend money liberally out of revenue upon the upkeep of the road and equipment, and this policy was continued in the past year, the ratio of such outlays to gross receipts having been higher than for any year since 1907-8, when, by reason of floods, fires, and wash-outs, it was unduly swollen. Notwithstanding a reduction of almost $2,600,000, in conducting transportation, the ratio to gross receipts was raised to over 36%. It has however to be borne in mind that although gross revenue has diminished, the Company has had to pay higher rates of wages to its employees, and at the same time has been prevented by State regulations from substantially curtailing the passenger-train service. Had it been possible to reduce the passenger-train service, the effect upon conducting transportation would have been marked, as no less than 61% of the train mileage is passenger. That the officers are striving to effect real economies is evident from the satisfactory improvement in the past year in the use of locomotive fuel, each pound of which moved in freight service 6.83%, and in passenger service 2.85%, more gross ton miles than in the previous year. The saving of fuel thereby effected in the past twelve months was $450,000, and for the two years this movement has been in progress the saving has aggregated $1,158,000. Comparison of the expenses in the past 11 years is shown below:—

(a) New Basis. (b) Old Basis.

Further progress was made in increasing the physical strength of the property and placing it in a still better position than heretofore to cope with the greater volume of traffic anticipated to accrue to it. As regards locomotives, the average weight has now been raised practically to 85 tons, whereas 10 years ago it was under 64 tons, while the average capacity of the freight cars is now 44.64 tons, against 31½ tons in 1905. The weight of rail upon the track likewise is being rapidly increased. Only 10 years ago there were practically no rails on the track weighing more than 80 lb. per yard; now more than one-fourth of the track is laid with 90-lb. rails, the length of line so laid in the past year having been 285 miles.

When one considers the outlook for the current year, one cannot fail to be struck by the numerous favourable factors that have to be taken into account. In the past year, owing to the disturbed conditions, no great expansion policy has been commenced, attention having been concentrated upon completing extensions and improvements of road in hand. Most of this work has now been completed, and with a revival in business in the West and in the traffic of the Company the vast capital outlays of recent years should become remunerative. No new capital is ranking for interest this year, and therefore it is reasonable to assume that any addition to the net earnings that may be secured may go to swell the net profit available for the stock. The territory served has again been blessed this year with abundant harvests, both of grain and of fruit, and the high prices at which their products can be disposed of should afford to farmers of the West increased spending power. Further, the mining industry has returned to a normal condition, and the demand for metals of all kinds should result in a considerable expansion in ore traffic. Again, the competition felt last year by the opening of the Panama Canal is lessened somewhat in the current year by the stoppage of traffic on the waterway by reason of landslides. On several occasions since

it has been in operation traffic on the Canal has had to be suspended on account of landslides; but this is, of course, an engineering difficulty that must sooner or later be overcome. It has always been recognised that to some extent the opening of the Canal would affect the position of the Western lines, but in the long run its opening will result in a more rapid development of the Pacific States, thereby affording increased traffic to the roads serving those regions, and the Southern Pacific, by reason of the geographical position of many of its lines, which practically parallel the Pacific Coast, should participate in the activity that will eventually arise. Meantime, however, permission has been given to the undertaking, as well as to other Pacific roads, to readjust freight rates to permit of competition with the Canal in the carriage of freight, more particularly of ores, hardware, and heavy commodities. To some extent the various companies will feel the effect of the lower rates, but, on the other hand, they will be in a better position to retain traffic which otherwise might have been lost to them.

So far in the current [illegible] exceptionally favourable results have been announced. There has been an increase of as much as $4,207,000 in gross receipts for the three months to September, and this has been attended by an expansion of no less than $3,382,000 in net receipts, operating expenses and taxes being no more than $825,000 higher. Some of the improvement is due, of course, to the great passenger traffic to the Exhibition; but freight earnings are now on the up grade, and even when the Exhibition receipts are no longer forthcoming, gross earnings are likely to expand. The course of earnings and expenses in recent months is shown below:—

Course of Earnings and Expenses of Southern Pacific since July 1914.

In considering the value of Southern Pacific stock several other factors have to be taken into consideration. In the first place, the Company owns valuable oil lands, which at present are not carried as an asset in the balance sheet. Litigation is now proceeding between the Government and the Company to recover the lands from the Company, but the directors are as confident as they were twelve months ago of the ability of the Company to sustain its title to the lands, and if the case is eventually settled in favour of the Southern Pacific the decision should be advantageous to the stockholders. A second case, also of great importance, concerns the Central Pacific Railway, whose entire Preferred and Common stocks are owned by the Southern Pacific, the Federal Government having instituted a suit to separate the two undertakings, on the ground that their union in one system violates the Sherman Anti-Trust Law. During the past year a great deal of testimony has been taken, and the case is fixed for argument in the Lower Courts on December 1 next. What the result of the argument will be no one can say; but whatever it is, it may be assumed that the losing party will appeal to the Supreme Court of the United States, so that a final decision in the matter may not be arrived at for a considerable time. Possession of the Central Pacific is of great value to the Southern Pacific, but, in the event of a decision adverse to the Company being rendered in the end, it must be borne in mind that the proceeds of the sale of the Central Pacific stocks would provide the Southern Pacific with sufficient money for all its capital requirements for several years to come.

Finally, the situation in Mexico, where the Company owns 1,242 miles of railway, seems to be somewhat more promising. About $38,000,000 of capital has been devoted to the extension of the Southern Pacific system down the West Coast of Mexico. The present profits are being secured after the payment of interest on the capital invested in Mexico, and without the receipt of one cent of revenue towards meeting that interest.

The price of the Common is now 109¾ London, and the yield is nearly 6%, allowing for exchange and accrued dividend.

The amounts and prices of the Company's principal securities and the yields afforded thereon are set out in the following statement:—

CANADIAN PACIFIC RAILWAY.

A VERY great change for the better has come over the affairs of the Canadian Pacific Railway, and whereas six months ago, and again three months ago, doubts were entertained in some quarters as to the ability of the Company to maintain its 10% dividend, the announcement of a quarterly distribution at this rate in the past week has passed almost unnoticed. It will be remembered that for 1914-15 the conditions affecting the Company's operations were so abnormal that the net profit available for the Common stock declined to $29,384,000. The 7% dividend paid out of the profits of the railway proper was only slightly more than earned, most of the margin in excess of the 10% dividend being due to the receipt in special income account of additional revenue arising from the War. For the three months to the end of September a further fall of $4,184,000 in gross receipts was accompanied by a shrinkage of $521,000 in net earnings, but since the commencement of October the position has been reversed. For last month there was an improvement of $4,159,000 in gross earnings, which was practically sufficient to wipe out the decline of the previous quarter. Net earnings for October have not yet been reported, but it may reasonably be expected they will afford a very satisfactory showing. For the first week of November gross earnings improved $1,107,000, and in view of the immense shrinkages that occurred in that portion of last fiscal year with which comparison has yet to be made, and the fact that conditions in Canada have now improved so considerably, a continuance of highly favourable earnings may be looked for. For the economic factors responsible for the striking contrast of the condition of Canada at the present time with the existing only a relatively short time ago, we would refer our readers to an article on Canada published in our last issue.

Canadian Pacific stock, which early in the year declined to 145½, and which has just recently touched almost 206, is now 199, at which the yield afforded is £5 8*s.* per cent., allowing for exchange and accrued dividend.

GRAND TRUNK RAILWAY NOTES.

It is understood that the Grand Trunk Railway Company of Canada has recently disposed of a further issue of Short-Term notes in New York. The amount stated is $4,000,000 in 5% Two-Year notes, and the whole is reported to have been disposed of, but particulars are not yet available as to the price at which they have been sold. The last issue of notes was made in London in June of this year, when £2,500,000 of 5½% Five-Year notes were sold at the price of 99, which raised the total of Short-Term notes of the Company to £5,500,000. By the issue in New York the amount is thus raised to about £6,300,000, which will mature as to $4,000,000 in November 1917, £1,000,000 in January 1918, £2,000,000 in October 1918, and £2,500,000 in July 1920. Beyond this the Grand Trunk has guaranteed the principal and interest on £2,000,000 of 5% notes of the Grand Trunk Pacific, due in March 1921.

BUENOS AYRES AND PACIFIC RY.

Like the other Argentine railway companies, the Buenos Ayres and Pacific suffered in the past year from the continued trade depression and the restriction of credit. The crops on the whole were good, wheat and oats being especially satisfactory, whilst a strong movement in the despatch of wine and fruit from the Cuyo Division helped the Company considerably in the latter months of the year. Nevertheless the falling off in gross receipts in the aggregate amounts to £342,700, or 7%, the principal decreases being in the passenger traffic and in general goods, both items being particularly sensitive to the effects of trade stagnation. To some extent the Company's efforts to economise were neutralised by heavy floods in most parts of the system, which in places caused considerable damage to property. Nevertheless the reduction in expenses comes out at £256,770, or 8.3%, and the ratio to gross receipts is lowered from 62.63% to 61.70%. This is a distinctly satisfactory achievement, having regard to all the conditions obtaining, and means that the decrease in net earnings amounts to less than £86,000, of 4.7%. Moreover, thanks to the receipt of an additional £35,000 from miscellaneous sources, the total net income for the year is smaller by only £51,000 than in 1913-14, and still amounts to the relatively large figure of £1,884,000. On the other hand, interest on Debenture stocks calls for an extra sum of £50,000, and miscellaneous charges, which include flood repair expenses (£48,636) and the year's proportion of special renewals (£8,369), absorbed some £41,000 more than in the preceding year. The net result, therefore, is a falling off in profit of about £143,000, and the divisible surplus is reduced from £374,000 to £231,000. This, however, is sufficient to provide the full dividends on the Company's 5% First Preference stock and on the Preferred stock of the Argentine Great Western Railway, and also a distribution of £2 16*s.* 6*d.* per cent. on the Second Preference stock, as well as on the Ordinary stock of the Argentine Great Western, the two stocks ranking for dividend *pari passu*. If we eliminate the flood repair expenses the dividends declared have been fully earned, but as it is there is a deficit of £23,000 to be made good after the dividends have been paid. This is taken from the balance of £341,000 brought in from 1913-14, leaving the large sum of £318,000 to be carried forward to the current year. In the circumstances we are surprised that the directors did not see their way to maintain the full 5% dividend on the Second Preference stock, seeing that the additional sum needed is only £68,000, and a balance of £250,000 would still have remained to be carried forward. However, they doubtless have some good reason for making the reduction, and we shall probably have more light thrown upon the subject at the meeting next week. The income statement of the Company for the last three years is set out beneath:—

Buenos Ayres and Pacific Railway.

	1914-15	1913-14	1912-13
	£	£	£
Gross earnings	4,539,000	4,881,000	5,591,000

Brought forward	341,000	289,000	90,000
Carried forward	318,000	341,000	290,000

The most disappointing feature in the report is the heavy falling off in passenger traffic. The number of passengers carried was 8,935,600, against 11,154,300, and this total is smaller than in any period since 1909. The decline of nearly 20% in numbers resulted in a diminution of no less than £291,000, or 25.6%, in receipts, and as the revenue from parcels, luggage, &c., was also smaller, the total coaching traffic shows a diminution of £310,900, or nearly 23%. The disastrous effect on the Company's passenger traffic of the disturbed state of credit and the depression in trade will be seen from the following comparison:—

Passenger Traffic, B. A. and Pacific Railway.

Year to June 30	No. of Passengers	Passenger Receipts	Parcels, Luggage, &c.	Total Coaching Traffic
		£	£	£
1915	8,935,600	842,900	209,100	1,052,000
1914	11,154,300	1,135,800	229,100	1,362,900
1913	11,600,100	1,174,600	237,100	1,411,700
1912	10,059,800	1,080,500	228,600	1,309,100
1911	9,109,000	1,074,000	187,200	1,261,200
1910	8,114,700	889,300	153,100	1,042,400
1909	7,122,100	742,000	119,600	861,600
1908	5,911,500	642,700	105,000	747,700
1907	4,124,800	552,000	85,300	637,300

The most profitable source of revenue is wine, and here the Company has done well, for with a slightly smaller tonnage handled the receipts therefrom have risen by about £10,000. Wheat gave satisfactory results, producing something like £215,000 more money than in 1913-14. Barley, oats, wool, and one or two other commodities show increases, but in every other direction freight traffic was reduced both in quantity and value, the most conspicuous being a decline of £172,600, or 27.3%, in general goods. On balance the total tonnage handled is up over 9½%, but as the bulk of the increase was in low freight-bearing commodities, whereas general goods, which are the most profitable to handle, were considerably reduced, the total freight revenue shows a decline of £47,000, or 1.6%. The relative importance of the various sources of income will be seen from the fol-

lowing comparison of the freight traffic of the line for the last three years:—

Freight Traffic, Buenos Ayres and Pacific Railway.

The efforts made to curtail expenditure were very successful, not as a result of any parsimonious cheeseparing in maintenance outlays, but in effecting real economy in conducting the traffic by reducing train mileage to the minimum of requirements. The saving in train mileage was as much as 16.4%, and as a result transportation expenses were reduced by £205,000, or 11.3%, and the proportionate cost of conducting transportation to the gross receipts was lowered from 37.15% to 35.44%. A rather smaller sum in the aggregate was spent in maintaining the property, but in proportion to the gross receipts the ratio is 1.09% higher. General charges and miscellaneous expenditures were sensibly curtailed. To show the reduced outlays of the various spending departments, both actually and in proportion to the gross receipts, we give the following statements.—

Working Expenses, Buenos Ayres and Pacific Railway.

On the whole the prospects are very encouraging, and now that the corner appears to have been turned a rapid recovery in earnings and profits is likely to be experienced. Already this year there has been an advance in receipts of £306,000, or 26.4%. Of course until the War is over there is not likely to be any great expansion in passengers or general goods traffic; but seeing that Argentina is rapidly growing in wealth as a result of the big demand for its produce at the exceedingly high prices now ruling, a great wave of prosperity is certain to pass over the country as soon as peace is restored and things in Europe again become normal. Meanwhile the present position of affairs is stimulating farmers to put more land under the plough, and in the particular districts served by the Buenos Ayres and Pacific this will undoubtedly mean a big development of the new areas recently opened up by railway construction, and upon which the Company has spent such a vast amount of money in recent years. As an earnest of this it is pleasing to note that the area under cultivation in the Company's zone this year shows an increase of 12% compared with 1914-15. The crop outlook, moreover, is very promising, recent abundant rains having greatly benefited the growing cereals. Camps likewise are reported to be in excellent condition, and the vineyards are said to be looking well. Late maize has been sown on a larger scale than last year, and except in the neighbourhood of Villa Mercedes the prospects everywhere are favourable. On the whole, therefore, the position is satisfactory, and just as the set-back in the Company's prosperity has been particularly severe owing to the large amount of undeveloped territory through which its lines radiate, so also is the recovery likely to be particularly pronounced now that a turn in the tide has set in. Indeed, the Company may never again have to face such trying times as it has experienced in the last two years, and it should, therefore, now begin to reap the reward of its enterprising policy of extension so energetically pursued in the last few years.

To show the rapid strides which the Company was making prior to the set-back in trade which commenced with the outbreak of the Balkan wars in 1911 we give the following retrospect of the main results of working for a decade:—

Buenos Ayres and Pacific System.

	Average Miles Operated	Gross Receipts	Working Expenses	Ratio.	Net Earnings	Net Profit*	Ord. Div.
		£	£	%	£	£	%

* Available for Preference and Ordinary.

† Affected by the strike of drivers and firemen.

From the list of securities given below it will be seen that, although prices have recovered somewhat of late, quotations are still at a relatively low level, and with a little discrimination some attractive investments may still be acquired. The Debenture and Guaranteed charges are well covered even in a disastrous year like the past, and as the yields afforded by these securities range from £5⅜ per cent. to well over £6 per cent., there is room for further appreciation in capital value. For the more speculatively inclined there are several good securities to choose from, and we would again draw attention to the 5% Cumulative First Preference stock of the Company at the price of 72¼, and the 5% Cumulative Preferred stock of the Argentine Great Western Railway at 79½, which rank together for dividend, and which should continue to receive their full 5% distributions.

(d) Yield on 4½ % dividend basis.

A. AND F. PEARS, LIMITED.

THE report of this Company twelve months ago was the last of those issued by the Company as an independent concern. It is now no longer such, being controlled by Lever Brothers, Limited, and the report for the year to June 30 is the first under the new arrangement. One result of the change is that fewer details are afforded as to the working of the business. Working independently the Company showed the gross profits, the general expenses and advertising outlay, and the net profit. Now only the net profit is given, and it is evidently not considered necessary to give the previous full details, inasmuch as the control has passed out of the hands of those who were formerly the Ordinary shareholders and into those of Lever Brothers, Limited. In pursuance of the arrangement made the old Ordinary shares were changed to 12% Preferred Ordinary shares, and then there were created and issued to Levers' 150,000 new Ordinary shares, the Company receiving in exchange 15% Cumulative Preferred Ordinary shares of Lever Brothers, Limited, bringing in to A. and F. Pears, Limited, "an additional income on investments of £27,603 per annum." The chief change as regards the former Ordinary shareholders of A. and F. Pears, Limited, is that in place of the steady 10% per annum which they had received they secure an additional 2% per annum.

The new arrangement has evidently been very successful, and the net profits for the past year are the largest secured since the flotation of the Company; though, of course, it must be borne in mind that a larger capital has been employed. Hitherto the most prosperous year was that for 1893, the year immediately after the formation of the Company as a limited liability concern, when the net profit amounted to £74,588. On only three other occasions were the net profits in excess of £70,000. Twelve months ago they were £61,641. For the year to June 30 last they rose to £78,812—a very satisfactory increase; and had it not been for the War the profits would have been "considerably larger," inasmuch as the sales on the Continent have been paralysed and raw materials have increased in price. The more prosperous times experienced have thus not been due to the abnormal times. They are due to the adoption of a new policy, which, in the words of the Chairman, has been "a phenomenal success." A reorganisation of the system of distribution was established, "broadening the field for new channels and laying a foundation for the future the development of which" should in time show satisfactory results. This development could not have been accomplished had it not been for the arrangement with Lever Brothers, Limited; and, in fact, in all probability, had it not been for the new agreement the usual 10% received by the old Ordinary shareholders would not have been forthcoming for the past twelve months. Now "we find ourselves safe in the zone of a well-organised system of commercial activity, where a large volume of business makes economies possible, thus increasing legitimate profits, whilst allowing the public to get better value, the employees better pay, merchants a good selling profit, and shareholders respectable dividends."

It may be recalled that in its present form the Company was registered in 1892 to acquire the century-old business of Pears' Soap. The prospectus set out in detail the amount of the gross profits and advertising expenses for the seven years previous to the flotation. In comparing the results secured since that time with those previously obtained, it should be noted that the average profits secured are shown before making allowance for depreciation, whilst the assumption of the prospectus was net profit after depreciation allowance.

Herewith we show in bird's-eye form the results since 1885:—

Results before Flotation.

	Gross Profits. £	Advertising. £	Net Profit. £	Inc. or Dec. £

* Before allowance for depreciation.

Each year a steady 10% dividend was distributed on the Ordinary shares. Now, as pointed out, these shares get 12%, calling for £38,400, as compared with 32,000. The new Ordinary shares receive a dividend of 20%, which has required £12,658 for the past year. A sum of £10,000 has been carried to reserve, and the carry-forward is £30,003, as compared with £34,249 brought in.

The manner of distributing the profits for the past six years may be seen from the following:—

Year ended June 30—1915	1914	1913	1912	1911	1910
	£	£	£	£	£
Trading profit, &c. ...	—	—	189,513	178,603	173,027	172,650
Sundry expenses	—	—	119,181	114,151	109,547	106,225

Depreciation	—	—	849	826	1,365	953
Deb. interest, 5 % ...	10,000	10,000	10,000	10,000	10,000	10,000
Pref. dividend, 6 % ...	12,000	12,000	12,000	12,000	12,000	12,000
Prefd. Ordinary dividend...	38,400 (12%)	—	—	—	-	—
Ordinary dividend ...	12,658 (20%)	32,000 (10%)	32,000 (10%)	32,000 (10%)	32,000 (10%)	32,000 (10%)
Reserve	10,000	10,000	10,000	11,000	-	—
Surplus	−4,246	−2,359	5,483	−1,874	8,115	11,472
Brought forward	34,249	36,608	31,125	32,999	24,884	13,412
Carried forward ...	30,003	34,249	36,608	31,125	32,999	24,884

At June 30 last the capital account was as follows:—

Share Capital Authorised and Subscribed.

		£
20,000	6% Cum. Preference shares, £10 each, fully paid	200,000
320,000	Preferred Ordinary shares of £1 each, fully paid	320,000
150,000	Ordinary shares of £1 each, fully paid	150,000
		670,000
	5% Debenture stock	200,000
		870,000

The whole of the above capital has been issued. The reserve fund, which at June 30 last was £90,000, is now brought up to £100,000. There is a depreciation account of £88,221 and a leasehold redemption fund of £16,596. On the other side of the accounts, freehold works, premises, plant and goodwill are lumped together, standing at £509,908. Of this it appears probable that goodwill is valued at somewhere about £300,000. The investments stand at £370,893, as compared with £220,390 twelve months ago. The total assets are valued at £1,209,287. The following is a summary of the liabilities and assets as at June 30 last:—

LIABILITIES.	£	ASSETS.	£
Issued share capital	670,000	Investments	370,893
Debenture stock (5%) ...	200,000	Stock-in-trade	169,134
Sundry creditors	31,408	Debtors, &c.	118,793
Reserve	90,000	Freehold works, premises, goodwill, &c.	509,908
Depreciation account... ...	88,221	Cash	40,559
Leasehold redemption fund ...	16,597		
Profit and loss	113,061		
	1,209,287		1,209,287

The Chairman pointed out at the annual meeting some of the results of the new arrangement made with Lever Brothers, from which it will be evident that a more progressive policy is now being energetically carried out. He said that already "we have placed upon the market through the channels which we now have, and could never have had under any other circumstances, at home and abroad new articles, which have been received well by merchants and the public. We expect very soon to be sending from our works every article requisite for the most refined toilet table, from soap and perfumery to bath salts, all made from the very finest materials, artistically got up, and bearing the hall-mark of the name of Pears as an assurance of the best British manufacture. We shall be quite prepared for any onslaught of foreign competitors in the future, with or without a protective tariff." Thus the outlook for the Company is probably brighter than it has ever been. With the large financial resources, the splendid organisation and driving power of Lever Brothers behind it, it seems likely that the business will grow at an ever-increasing rate, and with the world-wide reputation already secured the future profits should be on an ever-ascending scale.

Recent quotations are 99½ for the Debenture stock, giving a yield of about 5⅛%; 11⅞ for the £10 Preference share, yielding £5 3*s*. 11*d*. per cent.; and 38*s*. 6*d*. for the £1 Preferred Ordinary share, which gives a return of practically 6¼%.

The present capital, prices, dividends and yields are as follows:—

Amount	Description	Par	Price	Dividend	Yield
£		£	£	%	£ *s*. *d*.
200,000	Debenture stock	100	99½	5	5 2 0
200,000	Cumulative Preference shares ...	10	11⅞xd	6	5 3 11
320,000	Preferred Ordinary	1	38/6 xd	12	6 4 7
150,000	Ordinary shares...	1	—	20	—

Aguas Blancas Nitrate Co.—Interim dividend of 5% on Ordinary shares.

Bolands.—Interim dividend at rate of 4% per annum on Ordinary.

Campbell (P. and A.).—Interim dividend of 5%, tax free, on Ordinary.

Indian and General Investment Trust.—Interim dividend on Deferred stock at rate of 6% per annum.

Land Mortgage Bank of Texas.—Interim dividend on Ordinary at rate of 10% per annum (less tax).

Western Australian Bank.—Dividend of £1 per share, equal to 20% per annum. The paid up capital now stands at £250, reserve fund £680,000, reserve profits £24,087.

Insurance Notes.

SUN INSURANCE OFFICE.

This is the oldest independent British insurance Company. For 205 years it has transacted fire insurance, and like other institutions of the kind it now cultivates accident and cognate business, whilst it is closely allied for many business purposes with the Sun Life, which is, however, a separate organisation. The annual report for 1914 is satisfactory reading for shareholders. In a year beset by difficulties affecting both business and finance the results allow the maintenance of the rate of dividend declared for 1913, while a large sum has been devoted out of profits to writing off depreciation in investments and to strengthening the reserves.

The Company's fire premium income, amounting to £1,502,340, shows a reduction of £69,197. After adjustment of the reserve for unexpired risks there appears to have been a trading profit of £114,818, or about 7.6% of the premiums (very nearly the same proportion as was shown in 1913), which, together with interest earnings of £68,730, has been transferred to profit and loss account.

The profit results in the three sections of the accident department were as follows in 1914:—

Section	Premium Income	Profit from Interest	Profit or Loss from Trading
	£	£	£
Accident ...	7,589	287	Loss 298
Employers' liability ...	98,774	4,805	Profit 6,180
Burglary and general ...	27,022	815	Profit 5,562
Together ...	133,385	5,907	Profit 11,444

Thus the departmental profits seem to have amounted to £200,899, of which £74,637 arose from interest and £126,262 from trading. To this has to be added the sum of £41,491, representing the excess of interest and other earnings (£56,515) credited to profit and loss account over taxes and charges (£15,024) debited to that account. Thus the total profits of the year from all sources aggregated £242,390.

The amount brought forward in profit and loss account for 1913, after provision for dividends declared in respect of that year, was £342,723, so that the sum available in profit and loss account, before allocations and adjustments, amounted to £585,113, which has been dealt with as follows.

The subscribed capital of the Company amounts to £2,400,000, of which £480,000 is paid up (£360,000 of this amount having been paid up in 1911 and 1912 out of accumulated profits), in shares of £10 with £2 paid on each. The dividend at the declared rate, 14*s.* per share (representing 35% on the paid-up capital), requires £155,050 for distribution, after deduction of income tax. The sum of £10,000 is added to the pension fund (thereafter amounting to £62,642), £10,000 is set aside as a war contingency fund, £75,000 is carried to investment suspense fund, £75,000 is applied in writing down sundry investments, and the balance of profit and loss account thereafter carried forward to 1915 is £260,063.

Apart from capital the total funds carried forward, after deduction of sums reserved for outstanding claims and provision for dividends, and exclusive of pension fund, war contingency fund of £10,000, and investment suspense fund, amount to £2,649,352, as follows:—

	£
Fire fund	2,100,935
Accident fund	8,035
Employers' liability fund	104,510
Burglary and general fund	25,809
Dividend reserve fund	150,000
Balance of profit and loss account	260,063
	2,649,352

This represents about 162% of the combined premium income (£1,635,724) in 1914 in all departments. It is thus more than quadruple the reserve set aside as a specific provision for unexpired risks, at the usual ratio which is employed by this Company, of 40% of the premiums. That reserve amounts to £654,290, so that the additional reserve is £1,995,062. This discloses a remarkably strong position as compared with liabilities, while the shareholders' paid-up and uncalled capital supplies a further powerful line of security to policyholders.

The total assets shown in the balance sheet on December 31, 1914, amounted to £3,772,574. The directors state that in their belief these assets were in the aggregate fully of the value stated, less the investment suspense fund.

CALEDONIAN INSURANCE COMPANY.

Of the many excellent insurance companies whose headquarters are in the City of Edinburgh, the Caledonian is the oldest. It attained its centenary 10 years ago. Its subscribed capital amounts to £537,500, of which £107,500 is paid up, in shares of £25 with £5 paid on each. Dividends have been paid for some years past at the rate of 24%, or 24*s.* per share, and this rate is again declared as the outcome of the operations in 1914. The amount required for its distribution was not quite earned from the ordinary profits taken into the year's account, but the life profits are only computed at quinquennial intervals, and the next does not occur until December 31, 1917. Moreover, last year was one of exceptional difficulties, and as a large balance is carried forward to 1915 in profit and loss account, the maintenance of the dividend seemed quite justifiable under the circumstances.

The Company transacts fire and accident as well as life business. During the last few years its trading profits in the fire department have been considerable, and the greater part thereof has been applied in increasing the reserves, which had been depleted in 1906 through heavy losses arising from the San Francisco conflagration, to a satisfactory standard. In 1914 there seems to have been a small loss from trading in this section. The fire premiums, decreased by £2,883, amounted to £449,704, and after payment of claims and expenses, and adjustment of the reserves for unexpired risks, there was a trading deficit of £6,939, which was more than counterbalanced, however, by interest earnings (after deduction of income tax) of £11,773. The difference, £4,834, was transferred to profit and loss account, and thereafter the fire fund amounted to £352,899.

The various sections of the accident and miscellaneous business showed satisfactory results as follows:—

Section	Premium Income	Profit from Trading	Profit from Interest	Funds, exclusive of Provision for Outstanding Claims
	£	£	£	£
Accident	2,613	847	103	3,154
Employers' liability ...	24,103	2,433	610	15,667
General insurance ...	4,325	761	51	2,379
	31,041	4,041	764	21,200

The profit and loss account shows a profit (apart from the departmental profits already referred to) of £5,446, arising from the excess of interest earnings and fees not departmentally credited (£8,196) over charges of various kinds not departmentally debited (£2,750). Adding thereto the departmental profits, the total net profits taken into the year's account appear to have amounted to £15,086. The dividend, less tax, requires £23,818 for distribution, so that the balance of profit and loss account after provision therefor is reduced by £8,732. Its amount is £79,807, which, added to the fire fund, gives £432,707, or about 96.4% of the fire premiums.

The new life business in 1914 amounted to £921,430 in sums assured, of which £218,450 was reassured. Thus the net sum retained at the Company's sole risk was £702,980, which, although less than reported for 1913, was, with that exception, the largest amount in the Company's long history. The total net life premiums, amounting to £286,104, show an increase of £10,607, apart from a sum of £23,486 received as consideration for new annuities granted. After making a suitable adjustment for the cost of the annuity business, the expense ratio in proportion to premiums seems to have been about 13.6%, which is below the average in British life offices. The death claims, amounting to £150,976, were reported by the Chairman at the annual meeting to have been well within the expectation. Policies for £60,145 matured by survivance. Through the year's operations the life assurance and annuity funds were increased by £165,797 to £3,462,827, and the net interest yield thereon, after deduction of income tax, seems to have been about £4 6*s.* 8*d.* per cent., which indicates a profit of £1 6*s.* 8*d.* per cent., as the rate assumed for valuation purposes is only 3%. In all respects the life account seems very satisfactory, the normal sources of profit arising from interest, economy, and favourable mortality having been productive in each case.

The total assets as shown in the balance sheet on December 31, 1914, amounted to £4,274,672. Stock Exchange securities were taken at the prices of December 31, 1913, and at cost prices for subsequent purchases, and it is reported that when the investment reserve of £11,000 is taken into account the assets were in the aggregate fully of the value stated.

Grand Hotel, Eastbourne.—Balance dividend of 4% and a bonus of 5%, less tax, making 13%, less tax, for the year.

KAJANG RUBBER ESTATES.

We have from time to time recently in these columns pointed out some attractive shares of young rubber companies, and we this week deal with another similar undertaking—the Kajang Rubber Estates, Limited. Perhaps the shares of this Company are not so immediately attractive as those to which we have previously referred, but nevertheless the £1 shares, quoted at about 15s.—a discount of 25%—possess considerable merits as a speculative lock-up.

The issued capital is £75,000. The market capitalisation works out at about £42 per planted acre, a low figure for a Malayan undertaking about to reach the dividend-paying stage. The total area owned is 2,569 acres in Selangor, of which 1,325 acres are planted, the years of planting being as follows:—

	Acres		Acres
1906	22	1910	319½
1907	444	1911	619½
1908	35½	1912	15½
1909	87½	1913	20
		Total	1,325

The crop secured last year of 55,258 lb. was obtained from only 175 acres, the yield per planted acre thus working out at 315 lb. For this year the production is estimated at 96,000 lb., and for the nine months to September 30 the amount actually secured was 60,300 lb., an increase of 21,650 lb. over the corresponding period of last year. From the acreage table given above it will be seen that a proportionately large area was planted in 1910 and 1911, and the Company should reap advantage from the 1910 plantings at the close of this or the beginning of next year. Certainly the crop of 1916 should show a substantial increase over that of 1915. In the years following 1916 the crop secured should exhibit still more pronounced expansion, with the accompanying factor of reduced "all in" costs.

No dividend was paid for 1914, but at the annual meeting, held in April last, the Chairman expressed the opinion that "with fair business and no unforeseen trouble it is most likely the directors next year will be in a position to declare a dividend." He added that "the funds in the hands of the Company should be sufficient to bring the area under cultivation to full maturity." The 1914 balance sheet showed nearly £8,000 of surplus liquid assets.

In these circumstances it looks as if the earnings of the current year will permit of the payment of a dividend of 5%. Such a distribution to start with would give a yield of about 7% on the market price, and subsequently the dividend should steadily increase. When full maturity is reached, say in about five years' time, the output should be well over 450,000 lb., which at only 9*d.* per lb. profit would represent over 20% on the capital of the Company. Consequently the shares at their present price of 14*s.* are a good speculative lock-up, offering the chance of considerable capital appreciation. The position of the Company will be gleaned from the following particulars:—

Year ends December 31.			
Capital		£75,000, in £1 shares	
Market price of shares		15/-	
Total acreage		2,569½	
Planted		1,325½

Dividends	5%	Nil	Nil
Carry-forward		£1,185	£2,356

* Budget.

Bull (Henry) and Co.—Dividend at rate of 10% per annum, less tax, on Ordinary, making 8½% for the year.

Fullers' Earth Union.—Interim dividend at rate of 8% per annum, less tax, on Ordinary.

Nimmo (James) and Co.—Dividend of 10%, tax free, on Ordinary.

Thomson (J. G.) and Co.—Dividend of 8%, tax free, on Ordinary for the year.

INDIGO.

India, the main producer of indigo, after centuries of growth and steady expansion of output of dye material—at first almost entirely used for home requirements and subsequently increasingly exported, especially to the United Kingdom—attained its maximum production in 1894-95. At that time the indigo crop brought into India three to four millions sterling. About the same time there commenced a keen competition of German synthetic dyes produced from gas residuals. As the German dye came to be used, so it supplanted the hygienic and lasting vegetable indigo dye of India; and indeed in recent years not only has India witnessed its indigo industry all but disappear, but German synthetic dyes have been largely imported into India itself. The substitution has continued notwithstanding synthetic dyed material does not always keep its colour like natural indigo dyed goods do.

To revert to figures. After an allowance for the crop of 1913-14 being an exceptionally poor one, it is noteworthy that India's yield of indigo for the year was the lowest in modern history. The yield for 1894-95—the apex year of production—was 238,000 cwt., equal to 95,202 chests of 280 lb. per chest. The yield of 1913-14 was only 27,000 cwt., equal to 10,800 chests, the bulk of production being used in India.

When the world War came in 1914 the German supply of synthetic dyes was no longer available, and the special colours of khaki and indigo for dyeing cloth, &c., required for armies and navies, not to mention other officials, also general domestic requirements, came into demand consequent on German dyes being no longer available. The outcome of this situation was a phenomenal rise during the autumn of 1914 in the price of dyes, synthetic and otherwise. It was expected that with the German supply cut off the demand for natural indigo would be very keen, but so far there has been little movement in such direction.

Great efforts have been made to probe into the secrets of the Germans in the manipulation of gas-tar products and secure the manufacture in this country of synthetic dyes. In respect of some colours a fair amount of success has attended the efforts. In the matter of producing a blue dye of permanent colouring quality, however, little progress appears to have been made, and the public is told that certain blue shades of serge, cloth, &c., cannot be provided as dyeing material is not available. This is not the case; there is plenty of indigo if the buyers will only pay the price.

Dyers prior to the War readily obtained all their synthetic supplies from Germany. They had become accustomed to using a cheap material in place of the permanent high-grade vegetable indigo dye for blue cloth, &c., that in Government orders used to be stipulated for in the colouring of Army, &c., clothing. For some years past vegetable indigo has been increasingly ignored, and the German stuff used and sold to dyers who could not get it from Germany.

Before the War synthetic indigotin paste was in the region of 9*d.* per lb. for 20% indigotin, and natural indigo about 2*s.* 9*d.* Vegetable indigo dye, when synthetic was at, say, 1*s.* 6*d.* per lb., rose to about 4*s.* 6*d.* per lb.—to get the same amount of colour for clothing material it would take 3 lb. of synthetic paste to give the same dyeing power as 1 lb. of vegetable indigo. To-day 20% indigotin is 4*s.* 6*d.* per lb., and dearer than natural indigo at 12*s.* 6*d.* And yet the natural product continues to be neglected. But there is nothing else for dyers to use, and it seems evident they must readapt their plant and use the natural article, much to the benefit of the soldiers, sailors, &c., and the public generally, of getting cloth, &c., and everything else dyed with a pure vegetable dye instead of an inferior cheap and less satisfactory article. The properties of natural indigo improve and strengthen any cloth or

[illegible] that is [illegible] with it, which cannot be said of German synthetic.

In the days of German supplies there were loopholes for manipulation, and consumers were tempted by facilities for getting a much greater profit from using indigotin than from the use of genuine indigo. But it seems desirable to check this and take steps for restoring indigo to its proper place in the dye industry, which has been demoralised by German competition, oftentimes on dubious lines. Surely it is far better to support as far as possible our great Indian Dependency, than to go on seeking to use an unhygienic, inefficient compound, inefficient at any rate as to permanency of colour. Last season all the stock available of vegetable indigo itself was absorbed by individuals as well as by the Government. There are no stocks free, and the outlook is that the nations requiring a staying dye like indigo will be unable to again acquire stocks when, in about two or three months' time, the Indian production comes to be ascertained. There will be an all-round world's rush for Indian indigo if it be true, as is alleged by experts, that an efficient indigo dye cannot be produced in this country synthetically, and it is alleged that even an inefficient synthetic dye for indigo will be all but impossible to obtain. The Government has protected the dyers by acquiring all the pure vegetable indigo. The dyers ought to take advantage of this and acquire what they can. It is desirable to encourage an increasing production in India.

LIMA RAILWAYS.

THE report of the Lima Railways Company for the past six months shows that, owing to a decline from 23.90*d.* to 22.22*d.* in the rate of exchange, the results of working come out rather smaller than those for the corresponding half-year. The gross receipts at £6,799 are £539 down, and as expenses in Peru were £11 heavier, the net receipts at £6,198 were £550, or 8.3%, smaller. The net profit amounts to £3,290, against £3,711, a sum equal to a dividend of about 1⅝% per annum on the Ordinary shares. The last annual dividend was 1½%, the payment of which was subject to the receipt of remittances from Peru. No remittances, the directors state, have yet been made, and for this reason the distribution must still remain in abeyance, including the balance for the past half-year. It is clear, however, that the Company is earning more than sufficient to maintain the dividend at 1½%. The income statement for the last six years is appended. The figures for 1915 are based on the actual results for the first six months only:—

Lima Railways.

	1915*	1914	1913	1912	1911	1910	1909
	£	£	£	£	£	£	£

AMERICAN COTTON.

LIVERPOOL: Thursday.

UNTIL to-day the tendency of our market has been towards a lower level, and the two factors to which we referred in our last report—the improved crop outlook and the prevalence of more moderate estimates of probable consumption—have together discouraged "bull" enthusiasm, and have suggested that 7*d.* and over for American cotton in present circumstances is perhaps a high price. In the middle of the week prices had declined fully 20 points since we wrote, but to-day there has been a sudden rebound, and to-night's closing rates show but little reaction.

There can be no doubt that the open autumn weather throughout the cotton belt, and the absence of any killing frost, has added considerably to the yield, and that calculations regarding price based on

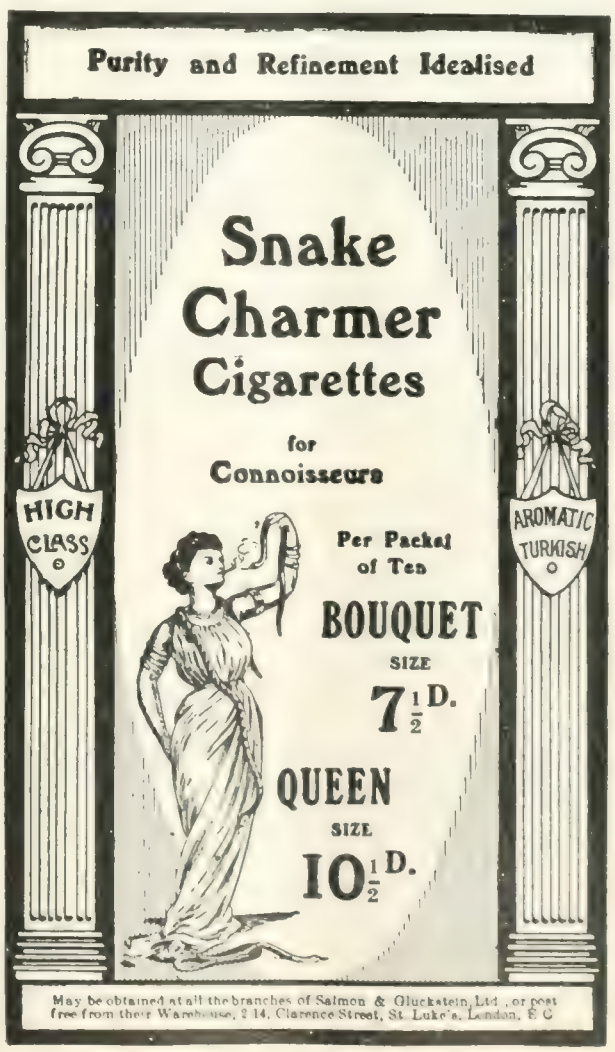
an eleven million bales, or less, crop must now be revised. The indications are that American holders are beginning to find the cost of carrying the unsold balance of the crop a little oppressive, and offers of actual cotton to this market have of late been more plentiful. The basis asked is still very high, and does not present much inducement for our local importers to buy at all freely, but anyone willing to pay the rates demanded can secure good lines of cotton. There has been a little more hedge-selling in the market of late, but merchants, while prepared to buy cautiously and to a limited extent, as a rule do not care to load themselves with a dear stock, which if not sold promptly will involve them in a heavy loss. A fair proportion of this new business negotiated is covering sales made to spinners for forward delivery—that is to say, our importers, while considering prices in America too dear to justify bringing cotton here unsold, have, acting as intermediaries, bought in America in cases where they have been able to secure an outlet for their purchases in this market. While the general outlook is rather bearish, we must remember that the conditions here and those in America are very dissimilar. In America there is a large carry-over from last season and an unusually large proportion of the new crop still to be sold, with a limited foreign offtake. Here we have an active trade demand and a diminishing stock, and to secure the supplies necessary for this country Liverpool must remain relatively stronger than America, and its price go to a parity sufficiently wide to ensure the shipment of our requirements for the remainder of the season. Until our stock and the cotton pointing to this market are adequate for our needs, operations on the short side are dangerous.

The Ginners' report up to October 31 was issued on Monday, and the return showed the quantity ginned to be 7,385,000, against 9,829,000 for the same period last season, and the quantity ginned in October to be 4,485,000, against 6,435,000 in October last year. The report has been taken, as far as it goes, to indicate a crop of at least 12,000,000 bales.

On the spot a very fair business has been done, though in its volume there is a little contraction. Owing to scarcity of labour in some of our manufacturing districts, the spinning machinery cannot be run to its full capacity. Any further calls for recruits for military purposes will increase this difficulty. The restriction of the output has tended to strengthen the position of yarn relative to cotton, and the margin at present existing between the manufactured article and the raw material shows a very exceptional profit to the manufacturer. In consequence spinners have been able to pay good prices for their Liverpool purchases, and better qualities of cotton with good staple have hardened against the buyer.

COAL AND STEEL.

Conditions in the Scottish coal and steel industries have not changed to any appreciable extent during the past fortnight. Coal export is still greatly hampered by the scarcity of tonnage and the high freights. The bulk of the trade is over France and the Mediterranean. Cargoes are going elsewhere, of course, but not by any means to the same extent. While the repression of the export trade is a serious matter as regards the national income, there is compensation at the pit-head in the increasing volume of the home trade, which is now engaging the attention of the coal-masters. The decision not to interfere for recruiting purposes with the supply of labour at the pits is welcome. Without this assurance owners were left in a very uncertain position, as the character of the Derby scheme gave them reason to fear that the supply of pit labour might be further diminished. As it is coal is moving off so freely that extra exertions will require to be made to meet Governmental demands, and maintain supplies for home consumption, apart altogether from the export trade.



On Monday the Scottish steel and iron works came still more completely under Government control. That does not mean much, except in name, for in every case Governmental orders have had first consideration. American deliveries are coming in more freely now, though still behind in point of time and quantities. Makers have been asked to supply as much for export as possible, but they cannot see how they can do any more, as circumstances are entirely against them. Labour is very scarce, and they cannot promise delivery with any degree of certainty. If, they argue, the Government would follow the example of the French Government and recall from the military ranks skilled men who have joined in such large numbers, something more might be done in the way of export, but with the present supply of skilled labour it is hopeless to expect an increased output or a further development of the export trade. Customers are more and more turning their attention to the American and Canadian makers, who are establishing a trade and connections which will be difficult, if not impossible, to turn in our direction again after the War.

Anglo Malay Rubber Co.—Second interim dividend of 12 *per cent.*

British Automatic Co.—Final dividend of 11*d.* per share, less tax, making 1*s.* 6*d.* per share for the year.

Rubber Plantations Investment Trust.—A call of 2*s.* 6*d.* per share has been made upon the partly-paid shares of this Company, payable on December 1, 1915. Such shares will then become 17*s.* 6*d.* per share paid.

Thornycroft (John I.) and Co.—In order to comply with the requirements of the Munitions of War Act, 1915, the accounts of John I. Thornycroft and Co., Ltd., are being made up to July 12, 1915, from which date the Company became a controlled establishment under the Act. A general meeting will be called about the end of the current month to approve the accounts and declare dividends in connection therewith

SOUTHERN PACIFIC COMPANY

AND PROPRIETARY COMPANIES.

THIRTY-FIRST ANNUAL REPORT—FOR THE YEAR ENDED JUNE 30, 1915.

REPORT OF THE BOARD OF DIRECTORS.

To the Stockholders of the Southern Pacific Company: New York, October 8, 1915.

Your Board of Directors submit this report of the operations of the Southern Pacific Company and of its Proprietary Companies for the fiscal year ended June 30, 1915.

PROPERTIES AND MILEAGE.

The transportation lines constituting the Southern Pacific System June 30, 1915, were as follows:

Divisions.	First Main Track.	Additional Main Track.	Sidings.	Ferries.	Water Lines.
A.—Mileage of lines belonging to or leased by Companies, the capital stocks of which are principally owned by the Southern Pacific Company:					
(1)—Operated by the Southern Pacific Company under leases:					
Central Pacific Ry.	2,235.68	256.04	870.20	9.90	125
Oregon & California RR.	692.48	2.85	167.87		
Southern Pacific RR.	3,497.31	211.76	1,478.49	3.00	
South Pacific Coast Ry.	106.69	20.46	49.58	3.00	
(2)—Operated by the owning Companies:					
Morgan's Louisiana & Texas Railroad & Steamship Co.	404.53	58.35	228.35	3.00	
Louisiana Western RR.	207.74	—	70.08		
Texas & New Orleans RR.	468.14	3.46	202.49		
Galveston, Harrisburg & San Antonio Ry.	1,351.21	6.59	332.80		
Houston East & West Texas Ry.	190.94	—	56.57		
Houston & Shreveport RR.	40.72	.69	7.35		
Houston & Texas Central RR.	894.63	1.27	258.79		
Southern Pacific Terminal Company	—	—	23.64		
Arizona Eastern RR.	366.80	—	81.67		
Corvallis & Eastern RR.	140.58	—	16 98		
Southern Pacific Company	—	—	—	—	4,683
B.—Mileage of lines belonging to Companies, the capital stocks of which are principally owned by the Morgan's Louisiana & Texas RR. & SS. Co., but which are operated by the owning Cos.:					
Iberia & Vermilion RR.	21.44	—	10.99		
Direct Navigation Co.	—	—	—	—	65
Total	10,618.89	561.47	3,855.85	18.90	4,873
Less operated jointly by Proprietary Companies	31.49	9.97	17.80		
Total miles of road operated June 30, 1915	10,587.40	551.50	3,838.05	18.90	4,873
Total miles of road operated June 30, 1914	10,477.00	506.60	3,788.93	18.90	4,873
Increase	110.40	44.90	49.12	—	—

In addition to the mileage above tabulated, the Southern Pacific Company solely controls through ownership of capital stock 890.46 miles of electric lines and 1,458.09 miles of steam lines, and jointly controls (through ownership of capital stock in equal proportions with the Atchison, Topeka & Santa Fe Ry. Co.) 400.99 miles of the North-western Pacific Railroad and 62.93 miles of the Sunset Railway, an aggregate of 13,399.87 miles.

Since June 30, 1914, railways have been purchased by Proprietary Companies as follows:—

HOUSTON AND TEXAS CENTRAL RAILROAD.

Under authority of Chapter 40, Laws of the State of Texas, 1913, the Houston & Texas Central Railroad Company purchased as of July 1, 1914, the railroad and appurtenances of the Hearne & Brazos Valley Railroad Company, extending from Hearne to Stone City, Texas, a distance of 18·61 miles.

TEXAS AND NEW ORLEANS RAILROAD.

Under authority of Chapter 54, Laws of the State of Texas, 1913, the Texas & New Orleans Railroad Company purchased as of July 1, 1914, the railroad and appurtenances of the Burr's Ferry, Browndel & Chester Railway Company, extending from Rockland to Turpentine, Texas, a distance of 11·89 miles.

INCOME FOR THE YEAR.

The income for the year ended June 30, 1915, of the Southern Pacific Company and of its Proprietary Companies, combined, excluding offsetting accounts, compared with last year, is as follows:—

	This Year.	Last Year.	Increase. (+) or Decrease (−).	Per Cent.
Average miles of road operated—				
Lines east of El Paso	3,534.12	3,459.16	+ 74.96	2.17
Lines west of El Paso	7,020.12	6,962.49	+ 57.63	.83
	10,554.24	10,421.65	+ 132.59	1.27
OPERATING INCOME.				
Railway operating revenues	$129,866,675 09	$138,520,258 56	− $8,654,583 47	6.25
Railway operating expenses	87,753,842 31	93,662,266 93	− 5,908,424 62	6.31
Net revenue from railway operations	$42,111,832 78	$44,857,991 63	− $2,746,158 85	6.12

Net Income	$20,570,319 47	$21,257,917 82	− $687,598 35	3.23
DISPOSITION OF NET INCOME.				
Income applied to sinking and other reserve funds	$939,724 57	$805,702 07	+ $134,022 50	16.63
Income balance transferred to credit of Profit and Loss	$19,630,594 90	$20,452,215 75	− $821,620 85	4.02
Per cent. on out-standing capital stock of Southern Pacific Company	7.20	7.50	− .30	4.02

In the foregoing table the income has been classified in accordance with the regulations of the Inter-State Commerce Commission, effective July 1, 1914. This change in the classification has necessitated a restatement of the figures for last year.

The details of Railway Operating Revenues and Railway Operating Expenses are fully dealt with under Transportation Operations.

The $50,946.14 reported against Uncollectible Railway Revenues represents the amount of charges against companies and individuals, for transportation services rendered, which have been determined to be uncollectible, and which are debited to said account in accordance with regulations of the Inter-State Commerce Commission, effective July 1, 1914. Similar charges in previous years were debited to Railway Operating Revenues.

The income for the year from rent of equipment exceeds the payments to other companies for rent of equipment by $176,256.88. This is a decrease, as compared with last year, of $90,223.72.

The principal item of increase in Miscellaneous Rent Income is the rental received from the City of Portland for the use of the Willamette River Bridge, a one-half interest in which was acquired during the year.

Of the $317,081.31 increase in Income from Unfunded Securities and Accounts, $177,722.09 represents interest on increased investment advances to Affiliated Companies, and the remaining $139,359.22 represents increased interest received on bank deposits, &c.

The increase of $467,714.72 in Miscellaneous Income is the result, principally, of taking into the year's income the net receipts from the operations of the steamships *Persia* and *Nile* from July 1, 1913, to June 30, 1915; and of crediting to income, in accordance with the regulations of the Inter-State Commerce Commission, interest on the Companies' own funds used for construction.

The increase in Miscellaneous Tax Accruals is the result, principally, of including in this account this year, in accordance with the regulations of the Inter-State Commerce Commission, effective July 1, 1914, certain taxes which were included in Railway Tax Accruals last year.

The increase in Interest on Funded Debt is the result, principally, of the excess of interest accruing this year on the Five per Cent Twenty-Year Convertible Bonds issued in June of last year over the interest accruing last year on the One-Year Five per Cent Secured Gold Notes retired in June of last year.

The decrease in the charge for Amortisation of Discount on Funded Debt is the result, principally, of charging against last year's income the remainder of the discount on the $26,000,000 of Southern Pacific Company One-Year Five per Cent. Notes retired in June of last year.

The amounts reported against Maintenance of Investment Organisation represent expenses of the Southern Pacific Company for other than railway operations, and the expenses of keeping up the corporate organisations of the Proprietary Companies, the properties of which are operated by the Southern Pacific Company under leases.

The decrease in Miscellaneous Income Charges is due to the fact that last year the charge for depreciation on rolling-stock owned by the Southern Pacific Company and leased to other companies was included in this account; while this year the corresponding charge is included in operating expenses, in accordance with the regulations of the Inter-State Commerce Commission.

On June 30, 1915, the principal of advances to the Southern Pacific Railroad Company of Mexico amounted to $38,993,894.69. Interest accruing on these advances has not been taken into the income of the Southern Pacific Company.

CAPITAL STOCK.

The capital stock of the Southern Pacific Company outstanding at the beginning of the year amounted to		$272,672,405 64
Issued during the year:—		
Common stock issued in exchange for a like amount of Five per Cent Twenty-Year Convertible Gold Bonds surrendered and cancelled		2,000 00
Amount of Southern Pacific Company stock outstanding June 30, 1915		$272,674,405 64

There was no change during the year in the capital stocks of the Proprietary Companies.

The amount outstanding June 30, 1915, was as follows:		
Common stock	$315,800,572 00	
Preferred stock	29,400,000 00	
		$345,200,572 00

Stocks of Proprietary Companies outstanding June 30, 1915, were held as follows:—

Owned by Southern Pacific Company	$344,767,400 00	
Owned by Morgan's Louisiana & Texas RR. & SS. Co.	350,000 00	
In the hands of the public	83,172 00	
Total		$345,200,572 00

FUNDED DEBT.

In December 1914, to provide for the purchase of new equipment, an Equipment Trust, to be known as "Southern Pacific Equipment Trust, Series C," was created, and an issue of $1,170,000, par value, Four and One-Half per Cent. Equipment Trust Certificates authorised, all of which were issued during the year, and, in accordance with the terms of the trust, guaranteed by the Southern Pacific Company.

Under an agreement made in December 1914 between The Galveston, Harrisburg & San Antonio Ry. Co. and the holders of all of the outstanding Galveston, Harrisburg & San Antonio Ry. Co. Mexican and Pacific Extension Second Mortgage Six per Cent. Income Bonds, $3,815,000, par value, of the said bonds were retired; the rate of interest on the remaining $2,539,000, par value, of such bonds still outstanding was reduced to 5 per cent. per annum; the endorsement making such interest conditional was cancelled; all obligation, if any, of the Railway Company in respect to sinking fund payments accruing on or prior to January 1, 1915, was released; and the payment of the principal of and interest on the $2,539,000, par value, of such bonds still outstanding was guaranteed by the Southern Pacific Company.

The funded and other fixed interest-bearing debt of the Southern Pacific Company and of its Proprietary Companies outstanding June 30, 1914, was as follows:—

Southern Pacific Company	$203,226,336 58	
Proprietary Companies	456,106,632 24	
Total outstanding June 30, 1914		$659,332,968 82
Add—		
First Mortgage Six per Cent Bonds of the Burr's Ferry, Brownfield & Chester Ry. Co., the property of which was purchased by the Texas & New Orleans RR. Co., July 1, 1914, subject to the mortgage indebtedness		165,000 00
		$659,497,968 82
Issued during the year:—		
Southern Pacific Company.		
Equipment Trust Certificates Series "C"	$1,170,000 00	
Five per Cent. Twenty-Year Convertible Gold Bonds, balance of subscriptions	3,006,573 42	
	$4,176,573 42	
Southern Pacific Railroad Company.		
First Refunding Mortgage Four per Cent. Bonds—		
Against outstanding bonds retired	$21,000 00	
Against expenditures for additions and betterments	6,585,500 00	
	6,606,500 00	
		10,783,073 42
		$670,281,042 24
Retired during the year:—		
Southern Pacific Company.		
San Francisco Terminal First Mortgage Four per Cent. Bonds:		
Purchased from payments to sinking fund	$12,000 00	
Five per Cent. Twenty-Year Convertible Gold Bonds:		
Retired in exchange for a like amount of Common Stock issued	2,000 00	
Equipment Trust Certificates Series "A," due March 1, 1915, paid off	1,012,000 00	
Equipment Trust Certificates, Series "B," due September 1, 1914, paid off	201,000 00	
	$1,227,000 00	
Central Pacific Railway Company.		
Three and One-Half per Cent. Mortgage Gold Bonds:		
Purchased from proceeds of sale of lands	$649,500 00

(e) Figures in last year's report were for commercial lines only.

Since the opening of the Panama Canal, August 13, 1914, [illegible] of this Company has been [illegible] Atlantic and Gulf [illegible] shipped over transcontinental railroads.

The [illegible] which [illegible] by [illegible] was [illegible] [illegible]

tion. The construction of new buildings was retarded and railroad construction and development almost entirely abandoned, these conditions causing a material decrease in revenue derived from lumber and other construction material. There was, moreover, a widely distributed decrease of earnings upon general merchandise and miscellaneous traffic.

These unfavourable conditions, and consequent general retrenchment in expenditures, have also affected both business and pleasure travel and have brought about a large reduction in passenger and related earnings, the former amounting to 41 per cent. of the total reduction of $8,654,583.47 in operating revenues. This reduction has been increased by serious inroads made upon local railroad travel by automobile competition, which the improvement of highways has encouraged and rapidly developed.

While these losses were offset to some extent by Exposition travel, the increased earnings derived from that source before the close of the year were not sufficient to affect materially the general results. Earnings from express business increased under a new and more favourable contract with the Express Company.

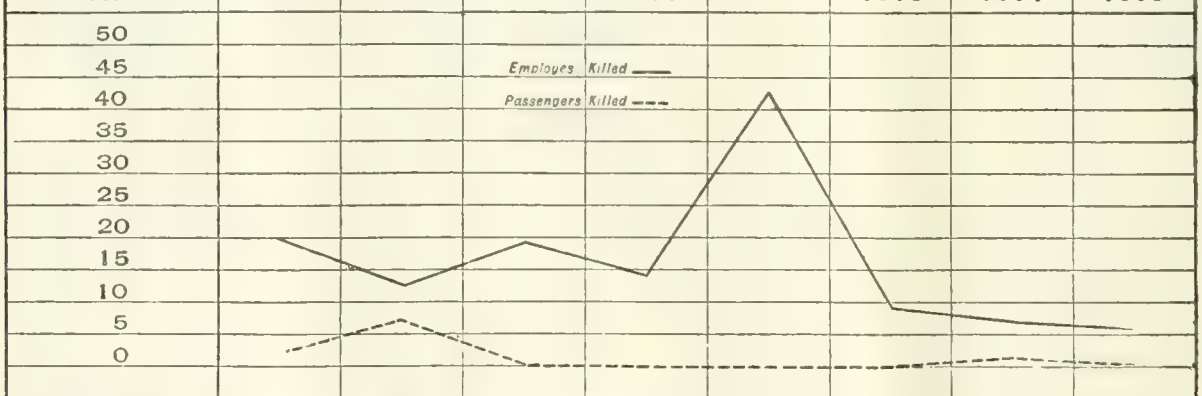
The net decrease in operating revenues of the Company was equivalent to 6.25 per cent., which is less than the average percentage of reduction in earnings of large railroad systems reporting to the Inter-State Commerce Commission.

A readjustment of rates is now being made which is expected to check the diversion of traffic to the Canal steamship lines; a normal condition of the mining industry has been restored; and, as has been previously stated, passenger earnings since the beginning of the new fiscal year have been substantially increased by Exposition travel. The prospect of better earnings during the coming fiscal year is encouraging, but the extent and permanence of the improvement will depend upon the return of general confidence in the business world, the destruction of which, without doubt, has been the most potent influence that has held back a revival of business and investment in new enterprises.

Although railway operating revenues decreased $8,654,583.47, or 6.25 per cent., total operating income decreased only $2,005,753.26, or 5.32 per cent., owing to a decrease of $5,908,424.62 in operating expenses and $791,351.73 in railway tax accruals. This reduction was effected in face of an increase of $765,082.34 in price of locomotive fuel; of an increase of $37,398 through higher wage schedules; of an increase of $75,589.80 in valuation expenses; and of an increase of $1,240,290.62 in charges to operating expenses for equipment depreciation and retirements, caused by including in this year's expenses $1,190,432 to comply with Inter-State Commerce Commission's classification, by which we were required to charge to operating expenses the depreciation portion of rental paid on equipment, which last year was charged to Income Account. But for these abnormal and uncontrollable charges total operating income would have shown an increase despite the large decrease in operating revenues.

These favourable results, attained under the most trying conditions as to new and intense competition, higher wages and fuel costs, increases in expenses due to costs of valuation, and increases in other operating expense items caused by compliance with new laws and rules of regulating bodies, in face of a decrease in volume of 6.63 per cent. in freight and 4.94 per cent. in passenger traffic caused by business depression, reflect great credit on your officers. For instance: Marked improvement was effected during the year in the use of locomotive fuel, each pound of which moved in freight service 6.83 per cent. and in passenger service 2.85 per cent. more gross ton miles than in the previous year. The saving thereby effected amounted to $450,388 as compared with last year and $1,158,015 as compared with two years ago.

As shown by chart below, continued efforts were made to secure safer operation, as a result of which the number of fatalities and injuries was reduced and the payments on account of casualties and damages of all kinds were $234,758.74 less than last year.



RAILWAY TAX ACCRUALS.

The net operating revenue for the fiscal year ended June 30, 1915, amounted to $42,111,832.78, whereof $6,371,272.84, or nearly one-sixth, was paid in taxes. With an increase of 179.40 per cent. in the mileage of all tracks operated during the life of the Company, taxes have increased $5,511,767.78, or 641.27 per cent. The decrease in Railway Tax Accruals of $791,351.73, or 11.05 per cent., compared with last year, is the result, principally, of charging to Miscellaneous Tax Accruals this year, in accordance with the new classification of the Inter-State Commerce Commission, certain taxes which heretofore have been charged to Railway Tax Accruals; and to the decrease in such taxes as are based on gross operating revenue.

SAFETY OF OPERATION.

During the past year no passenger lost his life in a train accident, and with but one exception none has been killed in a train accident for *six years and eleven months*, during which period 373,233,119 locomotive miles were run and 282,719,444 passengers were carried an average of 42.61 miles, or 12,045,555,744 passengers carried one mile. During the year 6 employees out of 8,664 lost their lives through train accidents in running 52,127,703 locomotive miles. Out of 38,833 employees engaged in pursuits not involving train movements, 15 lost their lives—an average of one fatality to every 810,300 days or 2,200 years worked.

GOVERNMENT ATTACK ON RIGHT TO CONTROL CENTRAL PACIFIC RAILWAY.

In February, 1914, the United States, acting through the Attorney-General, brought suit in the United States District Court for the District of Utah, against the Southern Pacific Company and the Central Pacific Railway Company, to separate the two companies, on the ground that their union in one system was in violation of the Federal Anti-Trust Act of 1890, known as the Sherman Law, and also in violation of the Pacific Railroad Acts, meaning the Acts of Congress providing for the construction of the Union Pacific and Central Pacific railroads. Since the last annual report, in which the nature of this litigation was explained, the testimony on both sides has been taken, and the case has been fixed for argument in the Lower Court on December 1, 1915. It may be assumed that an appeal to the Supreme Court of the United States will be taken by the losing party. As the case will be submitted to the Court for decision at an early date, it will serve no useful purpose to attempt now to predict the outcome.

GOVERNMENT ATTACK ON TITLE TO OIL LANDS.

The last report contained the following statement :-

"It follows, as a result of the decision in the Burke case, that proven fraud alone can avail to defeat our title to our oil lands. We know there was no fraud in obtaining the patents, and we may consider that the danger of losing the lands is now removed. Moreover, except as to a comparatively small quantity of land, in respect to which suits have already been instituted, the six years period of limitation is believed to be a bar even to a suit alleging fraud."

The Attorney-General of the United States, deeming it his duty not to abandon the pursuit of the Company's lands without a judicial investigation to determine whether or not our patents were fraudulently obtained, has renewed the litigation, specially alleging such fraud; and, in order to avoid the six years period of limitation, it has been further alleged that the Government was prevented from suing within the required time by fraudulent concealments of its acts by the Railroad Company. There has been no final decision in these suits. The fact that they have been instituted does not lessen the confidence expressed in the last annual report as to our ability to sustain our title to the lands in question.

GOVERNMENT ATTACK ON THE TITLE TO THE OREGON AND CALIFORNIA RAILROAD'S LAND GRANT.

In 1908 the United States brought suit against the Oregon & California Railroad Company and the Southern Pacific Company to forfeit to the Government the unsold portion of the lands granted by Act of Congress to aid in the construction of the Oregon & California Railroad. The ground of forfeiture mainly relied on was that some of the lands included in the grant had been sold in disregard of the requirements of the granting Act, namely, that the lands should be sold to actual settlers only for not more than $2.50 per acre, and in quantities not exceeding 160 acres. The quantity of land involved amounted to about 2,300,000 acres.

The Lower Court decided in favour of the Government, but in June of this year the Supreme Court reversed the decision of the Court below, and declared that the title of the Railroad Company to the unsold lands had not been forfeited and was unimpaired by the alleged grounds of forfeiture. The Supreme Court further decided that the lands were held subject to the original terms of the grant limiting sales to actual settlers, in quantities not exceeding 160 acres to any one purchaser, and at prices not exceeding $2.50 per acre. Recognising that such restrictive covenants were not appropriate to lands of the character of those remaining unsold, the Court practically referred the matter to Congress, by enjoining any disposition of the unsold lands or of the timber thereon "until Congress shall have a reasonable opportunity to provide by legislation for their disposition in accordance with such policy as it may deem fitting under the circumstances * *and at the same time secure to the defendants all the value the granting Acts conferred upon the railroads*"; with the proviso that, if Congress does not act within six months, the Railroad Company may apply to the Lower Court for a modification of so much of the injunction as enjoined any disposition of the land or timber. In other words, if Congress does not act within the time named, the Lower Court should grant relief from the broad injunction against any sales of the lands, and should confine the injunction to sales in violation of the terms of the grant. It will be observed that any legislation which Congress may provide is subject to the condition that it must secure to the Railroad all the value the granting Acts conferred.

It would not be profitable or expedient at this time to speculate upon the possible action of Congress. The Railroad Company will be prepared to co-operate with Congress in securing appropriate modification of the original restriction upon the sales of lands, but it will insist upon observance of the condition that the full value conferred by the granting Acts is secured to it.

* The italics are ours.

FEDERAL LEGISLATION FORCING PACIFIC MAIL STEAMSHIP COMPANY OUT OF BUSINESS.

The Southern Pacific Company owns 55.40 per cent. of the capital stock of the Pacific Mail, an American steamship Company that has been operating lines of steamships on the Pacific Ocean for the last 67 years.

The Act of Congress approved March 4, 1915, generally known as the La Follette Act, becomes effective as to vessels of the United States November 4, 1915. The Company cannot continue operations under the terms of that Act without incurring heavy losses. Figures prepared by chartered accountants show that the Act would increase the expenses of its trans-Pacific fleet as to wages and feeding crews alone by $640,805 per annum. Other provisions of the Act, relating to lifeboat crews and to the Central America line, would swell this amount. The abnormally large surplus in 1915, due to higher rates following the withdrawal of Canadian Pacific and Japanese steamers in consequence of the European war, would not suffice to meet the increases in wages and feeding expenses only that the Act will demand. The stockholders of the Pacific Mail Steamship Company realised that the Company could not obey this oppressive law and exist, and therefore have authorised the sale of their vessels as a necessary condition precedent to the liquidation of the Company.

GENERAL.

Dividends on the capital stock of your Company were declared during the year, payable as follows :—

1¼ per cent. payable January 2, 1915	$4,090,116 08
1¼ per cent. payable April 1, 1915	4,090,116 08
1¼ per cent. payable July 1, 1915	4,090,116 08
1¼ per cent. payable October, 1 1915	4,090,116 08
Total	$16,360,464 32

The revolutionary disturbances on the line of the Southern Pacific Railroad Company of Mexico have continued. It is estimated that from the beginning of the Madero Revolution, in 1910, to June 30, 1915, the cost of property destroyed will approximate 3,124,000 pesos, equivalent to $1,562,000. On account of these losses the Company filed claims with the Madero Government amounting to 287,953 pesos, all of which were approved but have not yet been paid. No further claims for property losses have been filed, owing to the lack of a constitutional central Government to which they could be presented. In addition to the above, the Company has claims for freight and passenger service performed, for rental of road and equipment and for material furnished to or confiscated by the various military authorities, amounting to 5,088,000 pesos. Bills for this amount (less 434,000 pesos received on account) will be filed with the proper authorities as soon as conditions permit. During the year only such maintenance work has been done as was absolutely necessary to render it possible to operate trains over those portions of the line which are open for traffic. The revenues during the year, including those derived from the transportation of troops and munitions of war, were slightly in excess of the expenditures for maintenance and operation.

In addition to the losses during the year from revolutionary causes, the Company suffered heavily from an unprecedented flood along the line in Sonora.

The continued revolutionary disturbances preclude any thought of completing, at the present time, the 99.47 miles of line from Tepic to La Quemada, referred to in last year's report.

In addition to the completed lines of railway reported under Properties and Mileage, and the railway of the Southern Pacific Railroad Company of Mexico, hereinbefore mentioned, construction is progressing on the lines of the following companies, viz. :—

	Length of Projected Line. Miles.	Track Completed. Miles.	Grading Completed. Miles.	Grading Progressing. Miles.

Texas and New Orleans Railroad -				
Turpentine to Browndel, Texas	17.63	9.13	—	8.50

The Board announces with sorrow the death on May 19, 1915, of General Thomas H. Hubbard, a Director, and on November 14, 1914, of Mr. H. A. Jones, Assistant Treasurer of your Company. General Hubbard served as a Director and as Vice-President for many years prior to 1901, and was again elected a member of the Board shortly before his death. Mr. Jones was in the service from 1885 to the time of his death, serving as General Freight Agent, Freight Traffic Manager and Assistant Treasurer.

Under the pension system put into effect on January 1, 1903, seven hundred and forty-six employees are carried on the pension rolls of the rail and water lines. The payments to them for the year amounted to $326,685.04.

By order of the Board of Directors,

JULIUS KRUTTSCHNITT,

Chairman of the Executive Committee.

BALDWIN'S, LIMITED.

A DISTINCTLY satisfactory showing is made by this well-known South Wales iron and steel Company for the twelve months to June 30 last, the profits indicating an increase of over £51,000 as compared with those of the previous year, and on only one other occasion—viz. for the twelve months to June 30, 1913—have larger profits been secured.

The total amount of share and loan capital in issue at J[illegible] is [illegible]:—

	£
4½ per cent 1st Mortgage Debenture stock	[illegible]
5½ per cent Cumulative Preference shares	[illegible]
Ordinary Shares £1 fully paid	[illegible]
„ „ [illegible] paid	[illegible]
	1,300,000

In May last the authorised share capital was increased from £850,000 to £1,500,000 for the purpose of acquiring the control of the Port Talbot Steel Company, Limited, by exchange of shares, but the effect of this is not shown in the accounts for the past year. The expansion thus decided upon is an important one. Baldwin's Limited is a progressive concern, and recognises that development must take place if it is to keep in the first rank in its business. Such development has been in contemplation for some time, and the plan consists of the construction of blast furnaces at Port Talbot, giving "unique facilities for the production of pig iron at the lowest possible cost." Moreover, the waste gases from the blast furnaces and coke ovens will be used for the generation of electrical power for the works. The estimated cost of this extension is about £500,000. Close to the site of these proposed blast furnaces are the works of the Port Talbot Steel Company, Limited, a Company which requires a large amount of iron for its manufactures, and which is in possession of a works equipped with the most modern furnaces and machinery for the manufacture of steel and of the many requirements of sections and plates in shipbuilding and constructional work. A close connection has taken place between the Port Talbot Company and Baldwin's Limited for some time, and the former was a large customer of the latter for coal; and indeed, "the ramifications are such that your directors look on the blending of the two companies as a necessity." In fact, Baldwin's nominated half the directors and was largely responsible for the management of the Port Talbot Company. The importance of the fusion will thus be readily recognised.

The arrangement has now been carried through, the whole of the outstanding Port Talbot shares having been acquired. The directors had hoped to be able to announce at the meeting of the Baldwin shareholders on October 28 last that they had commenced the erection of the intended blast-furnace plant, with its accessories in the way of coking and by-product plant for the extraction of dyes, &c. But the War has stopped all this for the time being.

The combined profits of the companies forming the original combination of Baldwin's, Limited, showed an average for the four years previous to the amalgamation of £86,400 per annum. On only two occasions since the formation of the amalgamated concern have the profits been smaller than this average sum, while in every other instance they have been substantially in excess of it. The profits made in the period since 1902 have been as follows:—

	Profits on Manufacturing £
Six months to June 30, 1902 ...	[illegible]
Year ended June 30, 1903 ...	[illegible]
„ „ 1904 ...	[illegible]
„ „ 1905 ...	[illegible]
„ „ 1906	110,016
„ „ 1907	148,712
„ „ 1908 ...	[illegible]
„ „ 1909 ...	[illegible]
„ „ 1910	[illegible]
„ „ 1911	[illegible]
„ „ 1912	[illegible]
„ „ 1913	[illegible]
„ „ 1914	[illegible]
„ „ 1915	[illegible]

Since 1905 the dividend distributions have steadily risen, and for the past four years have been 10% per annum. For the past twelve months the profits have reached £260,237, as compared with £209,179. Management expenses have risen from £15,473 to £31,254, and the allowance for depreciations has been increased from £30,000 to £45,000, while the allocation to reserve has risen from £25,000 to £50,000. The carry-forward is £86,733, as compared with £69,889 brought in.

The manner of distributing the profits for each of the past six years may be seen from the following:—

Year ended June 30—	1915 £	1914 £	1913 £	1912 £	1911 £	1910 £
Manufacturing and trading profit, transferred from Acc.	260,237	209,179	275,127	213,997	209,546	149,096
Management expenses ...	31,254	15,473	14,746	11,620	13,852	9,760
Depreciation ...	45,000	30,000	39,000	30,000	16,000	10,000
Debenture interest ...	22,500	22,500	22,500	22,500	18,181	14,598
Preference dividend	13,750	13,750	13,750	13,750	13,750	13,750
Ordinary dividend ...	55,000	55,000	55,000	55,000	41,250	27,500
	(10 %)	(10 %)	[illegible]	[illegible]	[illegible]	[illegible]
Expenditure for alterations and improvements of works and development of mines	14,532	15,284	3,360	10,534	24,009	30,286
Sinking fund premiums	11,357	11,357	11,357	11,358	11,357	11,357
Transferred to ...	50,000	[illegible]	115,186	60,000	60,000	30,000
Balance	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Brought forward ...	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Carried forward ...	86,733	69,889	49,054	48,826	49,591	38,444

It will be realised from even a cursory glance at the above that a very conservative financial policy has been consistently carried out, and it is evident that much larger distributions could have been made had it been deemed desirable. Two years ago the whole of the goodwill was eliminated from the accounts. There have been accumulated sinking funds for the redemption of Debentures and depreciation of leaseholds totalling £108,850, which has been paid by way of premiums to the Sun Life Assurance Society for the purpose of providing for the redemption in due course. The reserve fund now amounts to £325,000, and the total sum set aside for depreciation is £250,000. Herewith we set out a summary of the liabilities and assets as at J[illegible] last:—

LIABILITIES.	£	ASSETS.	£
Issued share capital	800,000	Freehold property, &c. ...	[illegible]
4½ per cent 1st Mort. Deb. stock	500,000	Stocks	[illegible]
Sundry creditors	382,248	Investments	261,447
Sinking funds	[illegible]	Sundry debtors	357,076
Reserve	325,000	Cash and bills	134,222
Profit and loss	[illegible]	Premiums	[illegible]
	2,244,081		2,244,081

The Company is doing all it can to keep up the supply of steel for shell-making, "for which we are laying down special plant at great outlay and inconvenience to our usual trade." The directors have handed over to the Minister of Munitions one of its large engineering shops free of charge for the manufacture of high-explosive shells, which are now being produced. It is the intention of the board to take a financial interest in the United Tube Corporation, "for the manufacture of the larger calibre of the high-explosive shells and other Government and trade requirements so urgently wanted." As regards the outlook, the Chairman thinks it is dangerous to make forecasts of any sorts; but it may fairly be assumed, we think, that for the time being business is likely to be active, though increased and increasing costs will largely, if not entirely, offset larger profits. We append a statement of the yields afforded on the various classes of capital on the basis of the last distributions:—

Amount £	Description	Par £	Price £	Dividend %	Yield £ s. d.
500,000	4½ % 1st Mort. Deb. stock ...	100	92½	4½	4 18 4
[illegible]	5½ % Cum. Preference ...	1	19 9	5½	5 13 1
500,000	Ordinary shares	1	29 0	10*	7 15 5

* Free of tax.

[illegible] Rubber Co.—Second interim dividend of [illegible] per share, [illegible].

[illegible] Tea Association.—Interim dividend of [illegible] less tax.

MEETINGS
OF PUBLIC COMPANIES.

LONDON MARITIME INVESTMENT COMPANY, LIMITED.

THE eighteenth annual meeting of this Company was held at Winchester House, E.C., on November 11, the Chairman (Sir Owen Philipps, K.C.M.G.) presiding.

The Secretary (Mr. F. Vernon Thomson) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, I have pleasure in rising to propose the adoption of the report and accounts for the year ended September 30, 1915, as submitted to you, and presume that, as usual, you will agree to take the report as read. It is now 18 years since the Company was incorporated, and during the whole of that period the average dividend paid to the shareholders has been 5½% per annum. In these times I am, of course, aware that 5½% is considered a moderate return on capital, but investors have to consider two things—viz., rate of interest and security of their capital.

Strong Financial Position.

The Company is in a strong financial position, there being no Debentures and no loans from bankers or otherwise, so that our 5% Cumulative Preference stock is a sound security which can be purchased at the present time to yield an investor over 5½% per annum. The Reserve Fund is separately invested in the British 4½% War Loan. The profit for the past year, including the balance brought forward, amounts to £19,646. After paying the dividend on the Preference stock and increasing the Reserve Fund to £12,500, we recommend a final dividend on the Ordinary stock at the rate of 6% per annum, less income tax, making 6% for the year, carrying forward the slightly increased balance of £1,200. It has always been the policy of the Board of Directors of this Company for the 18 years that I have been your Chairman to write off depreciation upon its securities as opportunity offered. Largely as a result of this conservative policy, notwithstanding the fact that some of our investments as a consequence of the War stand in the books at more than their present market value, I am pleased to be able to state that a valuation of the investments as at the end of our financial year in the aggregate shows that the capital of the Company is more than intact.

Shipping Outlook.

The outlook for British shipping is favourable, and the Company's revenue prospects for the coming year are good. I was interested to read a report of a recent meeting of the Hamburg Association of Shipowners, at which Herr Ballin, who is by far the largest shipowner in Germany, was the principal speaker. I have for very many years been in active competition with him in the shipping trade in many parts of the globe, and I know that there is no one in Germany more competent to speak on German shipping in its various aspects. It is, therefore, instructive to note that such an experienced shipowner as Herr Ballin, speaking to Hamburg shipowners, frankly admitted that the German Fleet is unable to give battle to the British Grand Fleet, but after admitting this he went on to say that he felt confident the German Fleet would acquit itself brilliantly if only the British Fleet gave it a chance! Herr Ballin has now probably few illusions about the naval aspect of the War and the inability of the German so-called High-sea Fleet to sail on the "high seas" or to protect any of the Hamburg American steamers in any part of the world.

Fate of Germany's Mercantile Marine.

The German mercantile marine has been built up in the past with the active assistance and support of the German Government, which support was none the less effective because it was generally indirect, and did not court publicity; such help, for instance, as the establishment of the "control stations" for emigrants, which were the cause of indirectly subsidising the German shipping companies in their competition with British shipping companies by probably not less than a million sterling per annum, whilst the preferential railway rates over the German State Railway for cargo shipped by German steamers was another case of indirect assistance to German shipping, the amount of which is difficult to estimate, but it gave German shipping companies an immense advantage. At the outbreak of the War the German mercantile marine consisted of 5,459,296 tons, as compared with 19,256,766 tons owned by Great Britain. Of the German tonnage 230,000 tons have been captured by the British Navy and 38,000 tons have been captured by our Allies, 117,000 tons sunk, and 397,000 tons interned in ports of the British Empire, whilst the remainder—viz., about 4,677,000 tons—of German shipping have (with the exception of an insignificant number of steamers running in the Baltic) for more than a year been rusting in German and neutral harbours.

Services of the Navy.

The services rendered by our Navy in guarding these shores and those of our Allies, in securing the safe transport of men and material upon a scale so vast as to be hitherto unknown in warfare, and in protecting British commerce are incalculable, and if not always so widely appreciated as they might be can never be forgotten at least by those interested, as we are, in the maritime industry of this country.

I shall be pleased to answer any questions respecting the Company's business, but I think that the report and accounts, which are set out in the same way as they have been for the past 18 years, give the shareholders all the reasonable information. I now beg to move: "That the report and accounts as submitted be received and adopted, and that a final dividend upon the Ordinary stock of 6% per annum, less income tax (making with the interim dividend paid in April 6% for the year) be declared and paid."

Mr. George Dodd seconded the resolution, which was at once unanimously agreed to.

On the motion of the Chairman, seconded by Mr. Arthur A. Baumann, Mr. Dodd was re-elected to his seat at the Board; and Messrs. Fookes, Hickman and Company, chartered accountants, were re-appointed auditors to the Company on the motion of Dr. Moody, seconded by Mr. Pascoe.

Mr. M. B. Snell proposed, and Dr. Moody seconded, a vote of thanks to the Chairman, which was carried by acclamation.

The Chairman, in acknowledging the vote, expressed the hope that the future of the Company would be even more prosperous than the past.

The proceedings then terminated.

UNITED RAILWAYS OF THE HAVANA AND REGLA WAREHOUSES, LIMITED.

THE eighteenth ordinary general meeting of United Railways of the Havana and Regla Warehouses, Limited, was held on November 11 at Winchester House, E.C., Mr. C. J. Cater Scott, the Chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said that Cuba was one of the countries which had benefited by the War. With the exception of the tobacco industry, which had suffered by the crisis in the cigar business, the island had enjoyed a prosperity such as had seldom been its lot before, due to the very large crop of sugar, for which the owners obtained very high prices in consequence of the reduced amount of beet sugar available from elsewhere. This had enriched the island extraordinarily. The spending power of the population was largely increased, and this was reflected in the Company's largely increased receipts.

A Record Year.

Their total receipts were £1,692,361, or £80,690 more than in the previous year, and £65,000 more than in 1912-13. It was the biggest year they had ever had. The expenditure, £894,466, had decreased by £55,945, and the ratio of working expenses to receipts was 52.85 per cent., against 58.97 per cent. The result was a balance of £797,896, or an increase of £136,636. The total goods tonnage was 7,376,000 tons, an increase of 870,000 tons. The passengers carried numbered 7,753,000, an increase of 642,000. These were very big figures, and yet their traffic had never been carried with more satisfaction to the general public and greater freedom from complaints. On permanent way there had been no cutting down at all; on the contrary, there was a slight increase; but on maintenance of locomotives and rolling-stock there was a saving of £46,000, rendered possible by the policy carried out in the past of raising very materially the condition of rolling-stock and locomotives by judiciously weeding out everything that was found expensive to maintain and to operate, and revenue account had in the last five years been charged with a very large proportion of the cost of purchasing 14 locomotives, 57 passenger cars, 16 baggage waggons, and 2,773 goods waggons. Last year the dividend was paid in Debenture stock, but the dividend of 5% now recommended would be paid in cash and at once. The cost of maintenance was not likely to be so low in the current year. The position was stronger than a year ago, and they would be able to do a little more to improve the property without extravagance. In the past year the percentage of capacity to traffic in regard to passengers was 31.90, an increase of 4.28%, and in goods of 40.14, an increase of 4.72%, both showing distinct gains. The consumption of coal per ton mile of traffic was 1,272 lb., or a decrease of .05 lb., which on their large consumption represented no insignificant gain. In cash and moneys on loan the balance sheet showed a total of £723,755, or £654,000 more than a year ago. The Florida East Coast Railway had

established a ferry service between Key West and Havana [illegible] This to purchase another steamer. Experience led him to believe that the effects of this traffic in the future would be even [illegible]

The Western System.

[illegible] interested in the Western Railway of Havana. The districts of the Western had undoubtedly been hard hit. There was a reduction in the goods traffic receipts of £14,000. Happily they had an increase against that in the passenger traffic of £13,700, but that was due to their having electrified a portion of the railway, where they had built up quite an extraordinary passenger traffic. The gross receipts for the Western had been £288,012, or a[illegible] the expenses were £170,27[illegible], a decrease of £9,347. The working expense ratio was 61.19%, or 3.54% better than in the previous year, and the available balance was £107,535, which was £8,465 more than in 1913-1914. This had enabled the Western Company to pay its usual dividend of 7%, and to add £15,000 to its reserves. So far for this year the receipts did not show very well. The net receipts to November 6 were £89,285, or £6,076 less than last year. Then he came to the Havana Central Railroad, in which they were largely interested. The net receipts for the year were $611,066, or an increase of $26,926. That had enabled the Company to pay the full note interest and the Debenture interest, and to redeem £1,800 of unpaid coupons. During the past year the progress made by the Havana Central was small, but from July 1 to November 6 the receipts had been £99,839, or an increase of £11,356, so that the outlook at present for the current year was distinctly good. The Cuban Central had had a most excellent year, and was paying 4%, against 2%.

The Current Year.

Reverting to the United Company, the prospects for the current year, with the exception of tobacco, which he was afraid would be bad—which, however, was not important so far as the United was concerned—were distinctly good. Mr. Orr estimated that the sugar would show a 10% increase, and the general traffic was already everywhere good. The receipts to November 6 were £451,446, or £100,466 more than last year. In fact, up to date they had an increase of 20%—nearly 25%.

Sir Henry Mather Jackson, Bart., seconded the resolution, which was carried unanimously.

CUBAN CENTRAL RAILWAYS, LIMITED.

[illegible] ber 11 at Winchester House, Old Broad Street, E.C., Mr. C. J. Cater Scott (Chairman of the Company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Our total receipts are £646,874, or £61,037 more than in the previous year, while our expenses are £343,408, or £24,753 less than in the previous year, the ratio of working expenses being 53.09%, against 62.84%. You will see, therefore, that the ratio of working expenses is down very nearly 10%, and I think you will agree that is [illegible]

Advance in Profits.

The profit on the year's operations of the railways amounts to £505,466, or £85,790 more than in the previous year, and that, again, I think, is most satisfactory. I might perhaps point out to you that the decrease in the expenditure is all the more surprising as the goods traffic during the past [illegible] that the cash in hand is £124,000, as against £80,000 in the previous year. During the current year I do not think we [illegible] as in the past year, and, as we are to-day in a stronger position, I do not think it would really be advisable to attempt it. We have not let down the property during the past year, and we must not let it down in the future. In the last two years we have added 16 locomotives and 675 wagons. This has enabled us to reduce our maintenance and at the same time to carry the traffic more satisfactorily. At the same time we have arranged for all the heavy locomotive repairs to be carried out at Cienaga, at the shops of the United Railways of the Havana, which is close to Havana. Now, if you will turn to page 6 of the report, you will [illegible] which is the available balance of net revenue after paying our fixed charges, &c. We propose, in the first place, to transfer £25,000 to reserve account, another £25,000 to the general renewals reserve, £5,000 to the insurance account, and £5,000 to the pension account. We lay great stress on this pension account. In the past there has not been a very satisfactory method for dealing with employees who have grown old in the service of the Company, and we do think men who have served us well should, when their time for work is ended, be properly provided for, and that is what we hope to do through the means of this pension fund. Then the Board recommends a final dividend of 2¾%, less income tax, on the 5½% Cumulative Preference shares in respect of the year ended June 30, 1915. That absorbs another £33,550. We recommend a dividend of 4%, less income tax, on the Ordinary shares, absorbing £36,000, and we carry forward £14,538 10*s.* 11*d.* I venture to say, in submitting these figures to you, that I think you will all share the satisfaction of the Board that we are able to make such a very successful showing for the past year. I may, perhaps, just mention for your information that our reserve account will now stand at £100,000, our general renewals at £85,033, the insurance account at £18,886, and the pension account at £16,701.

"Prospects Distinctly Good."

For the current year—that is, 1915-16—our prospects are distinctly good. Although, through a crisis in the cigar trade, so many orders have been cancelled since the outbreak of war, and the tobacco traffic promises to be poor, there is a promise of a very large sugar crop. Mr. Morson estimates the increase in the sugar crop at 15%, and I think this must tell not only on our sugar receipts, but on our whole business, and you can see from the receipts which are published every week that we are already enjoying increased prosperity from the enrichment of the island. Our receipts for the current year—that is, from July 1 to November 6—amount to £143,676, or £22,317 more than last year; and, remember, that is without taking in anything on account of the new sugar crop, which should begin to come to us towards the end of this year. Therefore, I think I can say that we can look forward to the results which we shall lay before you in a year's time with confidence and satisfaction. When you have been served well it is always a pleasure to thank people to whom you owe a great deal, and I think we ought to thank Mr. Morson and his staff in Cuba, who have done extraordinarily good work for us in the last twelve months. At the same time, I should like to thank Señor Don Cosme de la Torriente, our lawyer there, who gives his closest attention to our interests. I also want to thank Mr. Ogilvie, our director, who spends so much of his time in Cuba in forwarding the interests of the Company. While thanking those gentlemen abroad, I also desire most earnestly—and here I can do it more from my own personal knowledge—to thank Mr. Maslen and our staff in London for the work they have done in very difficult times.

Sir Henry Mather Jackson, Bart., seconded the resolution, [illegible]

The Chairman next moved: "That there be and is hereby declared a final dividend of 2¾% (less income tax) upon the 5½% Cumulative Preference shares of the Company in respect of the year ended June 30, 1915."

The resolution was seconded by Sir Henry Mather Jackson, Bart., and carried unanimously.

The Chairman: I now move: "That there be and is hereby declared a dividend of 4% (less income tax) upon the Ordinary shares of the Company in respect of the year ended June 30, 1915."

Sir Henry Mather Jackson, Bart., seconded the resolution, and it was agreed to unanimously.

TALTAL RAILWAY COMPANY, LIMITED.

THE thirty-fourth annual general meeting was held on November 10 at River Plate House, Finsbury Circus, E.C., Mr. Charles W. Parish (the Chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: When we met here last November the War had been going on for about three months, and while I was able to give you the gross earnings of our line from July 1 to October 31, I explained how impossible it was to make any forecast of the future in view of the extraordinary conditions in which we were placed in common with other railways in Chile. But I did remind you that about 65% of the nitrate manufactured in Chile was used on the Continent, and that it was evident that this quantity could not be required. The nitrate companies quickly saw that they could not go on manufacturing nitrate which they could neither realise nor ship, and by the end of September eight oficinas on our line had closed down and two more ceased working in December, leaving only three in work during the last half-year, with the result that we brought down to Taltal only 124,780 tons of nitrate, as against 319,861 tons the year before, or over 60% less, and this reduction naturally caused a corresponding falling off in the quantity of fuel required by the oficinas, for we only carried 27,837 tons of oil, against 69,243, and 15,141 tons of coal, against 43,090. These figures explain to you at once the adverse conditions under which we have suffered. But this position was duly appreciated by our General Manager, Mr. Norton, by our British staff, and also by our Chilean employees, who at once grasped the necessity of cutting down expenses. One of the chief sources of the Chilean Government's revenue is the export duty on nitrate, and when this fell off it somewhat deranged their finances. It also brought about a great scarcity of trade bills, and for a time it was almost impossible to secure sterling remittances. The rate of exchange fell to below 7*d.*, and there gradually arose a very difficult financial position, and I think we may congratulate ourselves that our railway has

for the manufacture of explosives, &c., and the price, which [illegible] to a remunerative level, notwithstanding the high freights. We felt justified in pointing out in our report that we thought low-water mark had been reached in February, and that since then the general position had begun to improve, and I hope it may continue to do so. In view of the extraordinary contraction of our business it is useless to attempt any comparison of the present accounts with those of previous years. The results are clearly set out in the report, and show the gross receipts for 1914-15 at £132,882, as compared with £309,567 in 1913-14, and net receipts at £53,707, as compared with £153,898. It was in expectation of these reduced profits that we last year increased our carry-forward from £22,557 to £50,355, and this figure has now been increased to £63,230, after meeting our Debenture service of £24,000 and an interim dividend of 2% paid last April. We have pleasure in now proposing that a further dividend of 4% be paid, making 6% for the year, and leaving £27,230 to carry forward. As to the present year, our four months' gross receipts from July 1 are cabled at £65,461, and our expenses at £31,036, so there remains a profit of £34,425, which, after providing for Debenture service, works out at the rate of over 8% per annum on our £900,000 of capital, and I know this corresponds with the hopes of our General Manager for the present twelve months, provided, of course, that there are no troubles or set-backs in the nitrate trade.

Mr. Frank Henderson seconded the motion, which was carried unanimously, and the dividend recommended was declared.

BURMA CORPORATION, LIMITED.

THE annual general meeting, adjourned from December 22 last, was held on November 8 at Salisbury House, London Wall, Mr. R. Tilden Smith presiding, in the absence of Mr. Herbert C. Hoover (Chairman of the Company).

The Secretary (Mr. D. Anderson, F.C.S.I.) having read the notice calling the meeting and the auditors' report,

The Chairman stated the Company had an enormous ore body already disclosed, containing, upon a conservative basis, at least 2,000,000 tons, for their future plans for treating which they would require a very large amount of capital. They had about £100,000 in hand. Next year they expected to pay all expenses and have left some additional capital. In any case, from one source or another, with such a phenomenally rich concern as theirs certainly was, all the capital that might be requisite should be easily obtained. The Corporation now owned 99.8% of the shares and over 77% of the Debentures of the Burma Mines, Limited. The property in which the Corporation had therefore become interested, and owned by the Burma Mines, Limited, was known as the Bawdwin Mines, situated in that part of Burma known as the Northern Shan States, 169 miles from Mandalay. Both companies were British, and the composition of the boards was five British and two subjects of the United States of America.

Estimated Annual Output.

A study of the reports would show that from a small beginning the undertaking bade fare to become one of the largest single lead-zinc-silver producers in the world, capable of turning out 75,000 tons of lead, 65,000 tons of zinc, and 7,000,000 oz. of silver annually. Over £2,000,000 had been spent in the equipment and development of the mines, £1,000,000 of which had been derived from the smelting operations. The quantities of metal referred to would, it was hoped, enter the trade channels of the United Kingdom as it had hitherto done, for the Company was not seriously committed as to its future by any contracts for the sale of its products. On the basis of technical advice given to him and of his own commercial investigation, he had come to the conclusion that to enter successfully into the field of zinc smelting it was essential to start with an established works which had bought its experience under surrounding conditions, and this was available in this country. A proposal had been made to the British Government which, he hoped, would lead to the establishment of such a works or organisation as would deal with the principal zinc products of the Empire. He was doubtful whether this Government would offer any encouragement, but he had no doubt that the Australian Commonwealth Premier would. The production of the quantity of ore and metal mentioned would necessitate the expenditure of £1,500,000 per annum in wages and salaries, and these metals would represent an increase to the national wealth of approximately £3,500,000 per annum, a large portion of which would be distributed among the miners, surface workers, staff railways, steamship lines, metal workers, metal markets, and to shareholders in the Company, all British.

Government Support Necessary.

It was necessary that the sympathy and support of the Government should be secured for the Company on a liberal basis, which an undertaking of this scope warranted. A new enterprise of enormous importance, in which a large amount of capital was invested, had been established with great risks, and there were difficulties for the overcoming of which the support of the Government both at home and in the district was absolutely necessary in order that success might be assured, and as quickly as possible.

In conclusion the Chairman said: "The relations between the Government officials and the Company are in the main uniformly satisfactory. Unfortunately, however, there is one exception, and it is an important one. I refer to this with extreme reluctance, and I do not for a moment wish to suggest that the Superintendent of the Northern Shan States is prompted in his attitude by anything but the highest motives. He does not, however, appear to grasp the broad bearings of an enterprise of this nature in regard to the development of the economic condition of the States, but he appears to regard it as nothing more than a money-making concern. Admittedly, every industrial enterprise has for its basis the making of profit, but the British Empire has been founded upon that basis; but in its train benefits are brought by the industry and expenditure of capital to the locality where the operations are carried on, and it is submitted that this should be borne in mind by all officials who are carrying on the administration of the country where these industrial undertakings are established, and for the benefit of the district every support should be given to enable the undertaking to develop on prosperous lines. In the inception it is to the disadvantage of the State that heavy conditions should be imposed, and the highest charges should not be imposed. If the wealth of the community is increased by the utilisation of any dormant asset it is difficult to understand that heavy impositions should be exacted unless in the case of competition, and in that case the decision should not be based on which will pay the larger amount, but on which will benefit the community to the greater extent. Our desire must be to establish closer relations with the Government, and to convince them of the importance of our operations and the benefits that will accrue to the district in particular and to the Empire in general." He then proposed the adoption of the accounts and report.

Sir T. R. Wynne, K.C.S.I., K.C.I.E., in seconding the motion, fully endorsed the Chairman's remarks as to the magnitude of the Company's operations, and said he felt very fairly confident that the assistance which the Chairman claimed should be extended to the Company by Government would be given.

Statement by the Chairman of the Technical Committee.

Mr. Theodore J. Hoover: A favourable factor in the last eight months' work has been the continued decrease of water in the mine. We had reason to fear in the early stages of our development that we had a very wet mine, but, as work has proceeded with depth, the water has gradually decreased, and we have been able to catch it in the upper levels, so reducing the task of pumping. As the depth increases in the internal shaft, however, this increased depth gives us more labour, and until the Tiger tunnel connects with the ore body we shall be obliged to keep the mine drained by pumping. We do not, however, anticipate that we shall be obliged, on account of water, to suspend any development work which it will be necessary to prosecute. The Tiger tunnel is showing good progress. We have passed through 3,000 feet of very wet, loose ground, which required timbering practically throughout the whole length. We hope that the next 3,000 feet may be better driving ground. As soon as the Tiger tunnel reaches the internal shaft the development will be materially accelerated, as we will then have no hoisting to do, and will have gravity drainage for the water and natural circulation for ventilation.

No Indications of Failure in Depth.

One of the most satisfactory features up to date in the development and ore-reserve position is the fact, as indicated in recent telegrams, that the ore has already been followed down to within 50 feet of the Tiger tunnel, as proven by recent developments in the internal shaft, and there are no indications of failure in depth. If this ore body goes down to Tiger-tunnel level full strength we shall have much more than 3,000,000 tons of ore above the tunnel. We shall probably not crosscut the ore body again until we have finished the internal shaft to the Tiger-tunnel level. The programme which we have outlined for the coming year, and which I will refer to presently, may involve the curtailment to some extent of our development of the Chinaman ore body. This will be brought about by the necessity of hoisting from the internal shaft, say, 150 tons of high-grade silver-lead ore per day. This curtailment will not, however, [illegible] work, pending the time when the Tiger tunnel reaches the ore body. The increase since December 31 1914, from 1,300,000 tons of proven and probable ore to 2,000,000 tons of proven and probable ore is a splendid record. The 250,000 tons of proven and probable high-grade silver-lead ore disclosed in the lower levels brings the average assay of the whole up to the figure given in the Report, but it is interesting to observe that the assay of the 1,750,000 tons other than high-grade silver-lead ore also shows an increase of assay in all the metals. This high-grade silver-lead ore

was to be expected, in view of the geological and mineralogical indications in the upper levels.

Production Prospects for 1916.

Concentrating Mill.—Beginning in June 1914 we have made on the mine in a small testing plant some 200 tests on samples of ore running from a few pounds up to 60 tons. As a result of this testing, your engineers have felt amply justified in recommending the erection of a 100-ton mill, consisting of crushers, jigs, tables, and slimes-treatment plant. As a result of operating his 100-ton plant continuously for several months, we will then be in a position to design the larger 1,000-ton per day plant. The 100-ton mill is now complete, and we shall shortly have reports as to results. Fuel supply is giving us considerable anxiety, due to the fact that our present and previous supplies of wood fuel cannot be depended upon indefinitely, and that we shall therefore be under the necessity of using coal in many of our operations where we have in the past used wood. This coal involves overseas freight, which in these times may place us in an uncomfortable position. We think it will be possible during most of the year 1916 to be on a basis of operations whereby we will mine 4,500 tons per month of high-grade lead-silver ore; 1,500 tons, more or less, of this will be sent to the smelter direct. The balance of this 4,500 tons per month, or 3,000 tons per month, will be sent to the mill and will there be treated in such a manner as to yield about 1,500 tons of concentrates assaying approximately 60 per cent. lead, 54 oz. silver, and 10% zinc. This 1,500 tons per month of high-grade lead-silver concentrates will be mixed with the 1,500 tons of high-grade ore before mentioned, and will be roasted, sintered, and smelted. The above mining, milling, and smelting operations on 4,500 tons of ore per month should result in the production of about 1,500 tons of soft lead and 140,000 oz. of silver per month. The sale of the above metals should give us a revenue amply sufficient to pay all the costs of operating and all the capital expenditure which we have in view for the year 1916. We hope that, over and above paying all the operating and capital expenditures, there will also be a surplus, but because of the unknown quantities interjected into all mining business as a result of the War in regard to transportation, prices of metals and availability of supplies, we do not wish to make a more definite statement than the above as to possible profits.

In reply to a question, Mr. Hoover said that, at the rate of 300 feet per month, they should make connection between the Tiger tunnel and the bottom of the internal shaft in about nine months, but in order to be on the safe side they had alowed for twelve months.

The motion was carried unanimously, and Messrs. W. B. Peat and Co. having been reappointed auditors, a vote of thanks to the Chairman and directors closed the proceedings.

THE WESTERN TELEGRAPH COMPANY, LIMITED.

The eighty-second ordinary general meeting was held at Electra House, Finsbury Pavement, E.C., on November 10, Sir John Wolfe Barry, K.C.B., presiding.

The Secretary (Mr. E. Steer Hodson) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—I now have much pleasure in offering a few remarks on the Company's affairs during the twelve months ended June 30 last. The message receipts afforded an additional revenue of nearly £74,000 for the period under review, which included eleven eventful months of war, with its resultant stoppage in the case of our Company of telegraphic traffic with Belgium, Germany, and Austria. The closing of these sources of revenue has, however, so far been compensated by increased earnings due to the obligatory use of plain language enforced by the several Governments under whom we work. These restrictions were latterly modified, permission having been given in the early part of this year for the use of certain well-known codes with South American countries, which has been much appreciated by the telegraphic public. Congestion of lines beyond this Company's system necessitated the suspension on August 5 last year of "deferred" and "week-end" telegrams. The former were re-introduced on October 1, 1914, and advantage was quickly taken of the restoration of this facility. No damage to the Company's cables has been experienced in consequence of the War. The sections in North Brazilian waters were interrupted by normal circumstances for four months, and owing to the exceptional conditions then and there prevailing our cable-repairing steamer was unable to attempt their restoration until March last. Communication during the interruption was, however, maintained with the Northern States of Brazil by the Brazilian Government land lines. The general expenses show a decrease of nearly £9,000, principally due to three causes, the first being the occupation of our own offices and staff quarters at Buenos Ayres and Montevideo, thus effecting a considerable saving under the head of rent. The second was our inability, owing to the War, to obtain the usual annual supply of forms and stationery until after the close of our financial year. The third cause was the fall in the value of the Brazilian milreis, which affected all our payments in that currency. There was also the very considerable decrease of over £40,000 in the cost of the maintenance of the cables, but income tax was higher by close on £15,000. I feel sure that the shareholders will endorse the action of the directors in subscribing to the War Relief Funds. After providing £32,747 for Debenture stock interest, and £33,348 14*s.* 9*d.* for income tax, there remains a balance of £578,273 10*s.* 9*d.*; to this is added the sum of £33,157 9*s.* 8*d.* brought forward from June 30, 1914, making a total of £611,431 0*s.* 5*d.* Three interim dividends, amounting to £93,568 10*s.*, have been paid; £150,000 has been applied towards the reduction of the amount of capital expenditure in excess of the share capital and Debenture stock issued; £150,000 transferred to the general reserve fund, £30,000 to the land and buildings depreciation fund, and £50,000 to the provision on account of investment fluctuations. The directors now recommend the declaration of a final dividend of 3*s.* per share, making, with the interim dividends, a total dividend of 6% for the year; also the payment of a bonus of 2*s.* per share, both free of income tax, which together will amount to £51,982 10*s.*, leaving a balance of £85,880 0*s.* 5*d.* to be carried forward. The dividend and bonus will be payable on November 11. The balance carried forward is considerably larger than usual, but our message revenue for the current year since July 1 last shows a decrease of over £25,000, and it is not yet known whether and to what extent the proposed taxation of profits will affect the Company. It will interest you and our staff to know that a letter was recently received from the War Office stating that the Council fully realise the importance of the work on which the employees of the Company are engaged, and appreciate the efforts which are being made by them in the present emergency. I now conclude by moving: "That the report of the directors and the accounts for the year ended June 30, 1915, now submitted, be approved and adopted, and that a dividend be now declared of 3*s.* per share, making, with the interim dividends already paid, a total dividend of 6% for the year, and also a bonus of 2*s.* per share, making in the aggregate a distribution of 7% in respect of the profits for the year. The said dividend and bonus to be respectively free of income tax."

Sir John Denison-Pender, K.C.M.G. (Deputy-Chairman), seconded the motion, which was carried unanimously.

SUNBEAM MOTOR CAR COMPANY, LIMITED.

The annual meeting of the shareholders was held on November 11 at Wolverhampton, Mr. John Marston (Chairman of directors) presiding.

In moving the adoption of the report and balance sheet the Chairman said the Company was now a controlled establishment, and since last March their energies had been entirely at the service of the War Office, the Admiralty, and the Allied Governments. They had supplied a very large quantity of cars and ambulances to the War Office and large numbers of aviation engines (the Sunbeam-Coatalen) to the Admiralty. This engine had been the result of many months' experimenting by their brilliant engineer and designer, Mr. Coatalen, and they believed they had succeeded in producing an engine that could not be beaten, having regard to the work it had to accomplish. At the further request of the Admiralty the Company had taken up the manufacture of waterplanes.

An Active Year.

All the departments had been kept during the year in full work, but this had not been accomplished without a considerable expenditure of capital. Three large buildings had been erected and several more acres of land for further developments had been bought. Business had been carried on under great difficulties. The cost of production had increased in all directions, and materials of all descriptions had been very difficult to obtain, but the staff and employees had worked well, and had enabled the Company to keep pace with the requirements of the War Office and the Admiralty, and the result was a handsome profit of £240,000. A good deal of this profit had to be used in paying for the new buildings, additional land and buildings, and tools and fixtures to equip them, the Company being committed to an outlay of at least £40,000. An additional amount of capital was also required to carry on the business, so that although the profit was large, the Company's liabilities from month to month were considerably more than last year. The stock stood at a larger sum than last year, but it was every bit good, and had been taken at absolute cost or under. In a business with such an increasing turnover, it was not surprising to find the stock larger, and the management ought to be commended in keeping up their stock when there was such an increasing difficulty in obtaining raw material. It was necessary to order well beforehand so as not to run the risk of keeping any department standing. The freehold land and buildings, notwithstanding the depreciation, stood at £20,000 more than last year, the plant and machinery were £14,000 more, and the stock and materials were £60,000 more. To the reserve fund the Company placed £120,000, and they carried forward more than three times the amount they did last year, after the shareholders had voted the directors something for their labours.

Possible Inland Revenue Claims.

The shareholders would remember that those firms whose financial year ended after July 1, 1915, were not dealt with under the last Budget, though they had Mr. McKenna's assurance they would not be forgotten. It was, therefore, considered more desirable to strengthen the Company's position by a liberal allocation to the reserve fund and a substantial carry forward, so that the Government claims could be faced without fear, than to pay a larger dividend, which, of course, could easily have been done, seeing that not only were the profits larger, but the cash balance was very substantial. They believed, however, they would be treated in a reasonable manner, the Government recognising the benefit they were obtaining from the Company's enterprise, particularly so since the Company became a controlled establishment. The sum of £25,000 had been invested in the War Loan.

The Company's Policy.

Mr. W. M. Iliff, in seconding the motion, said they could congratulate themselves upon a remarkable balance sheet. This year's result had not been attained by sitting down and waiting for Government orders. The profit also had not all been made out of the Government. Early in the season they supplied a good number of cars for private trade, both at home and for export. They had also supplied quantities of cars for Russia and had supplied and were supplying their aviation engines to that country and France, in addition to our own Government. The £40,000 liabilities for new buildings would be capitalised and paid out of reserve. While the War lasted they anticipated having to send all their products either to our own Government or to one of the Allies, but when the time came they would not be behindhand in energy and resources to grasp the private trade both at home and abroad.

New Aviation Engine.

Mr. Louis Coatalen (joint manager), in supporting, said the Company would shortly put on the market another aviation engine of 300 h.p. It had only been possible to produce this engine through the lessons learned by their long experience in producing racing engines, so it was a vindication of the racing policy adopted by the Sunbeam Company. This new industry of the Sunbeam Company had been extended beyond all expectation, and represented a far bigger business than had ever been done in motor cars, so it would be realised what a valuable asset this would be.

Even should there be a big slump in the motor car trade the Company could still easily maintain its rate of profit on aviation engines alone. Moreover, they had a third string to their bow in the building of complete flying machines. The first waterplane had been delivered and had made a successful flight. The Company had in hand from the Admiralty orders for complete machines worth thousands of pounds, and this in itself would prov a very remunerative adjunct.

The motion was carried.

The dividend, bonus, and other recommendations were agreed to, and the directors were voted a remuneration of £4,500.

AERATED BREAD COMPANY, LIMITED.

The sixty-second ordinary general meeting was held on November 8 at the Cannon Street Hotel, E.C., Mr. George Edwards, J.P. (Chairman of the Company), presiding.

The Chairman, in moving the adoption of the report and accounts, said: The report and accounts for the past year, which we submit for your approval to-day, are far less favourable than we were led to hope they would have been at the commencement of the War. At our last annual meeting, when we had had three months' experience of war time, we found that our business had not been seriously affected, but since then, although our trade has increased, owing to the great development of the War, the shortage of labour, difficulties of transport and increased taxation, there has been an almost continuous increase in the cost of food and all the articles in which we deal. This has caused the margin of profit to be materially reduced, and had it not been for the advantages we possess as a Company and to economies we have effected, together with some increased charges to our customers, the profit would have receded to the vanishing-point. It may surprise you to learn that during the year we served more customers and took more money than in any previous year of the Company's existence. I think that in this time of stress it is very gratifying to us to know that we are not only retaining our business, but increasing it, when very many of our regular customers have left London to serve their country, and when most disastrous results have been experienced by many who are engaged in the catering trade. The increased price of food has been enormous. Our profit was also considerably affected by increased working expenses. The net profit is £36,002, being a reduction of no less than £39,124 on the previous year, and the lowest profit since the year 1891, 24 years ago. We have again written off £8,000 for depreciation, which leaves a balance of £28,002. On the credit side, the first item is buildings and property as per last account, £226,138. Capital outlay during the year was £29,251. This outlay on property increased that account to £255,390, but as we had reserved £20,000 from the profits of last year, and have written off £8,000 as depreciation from this year's revenue, the item of freeholds, leaseholds, plant and machinery is only increased in our books by £1,252, although the value of the property has been increased by nearly £30,000. The net profit, together with the sum brought forward from last year, is £56,545; the interim dividend, paid in May last, absorbed £17,285, so that there remains £39,260, from which we recommend the payment of a balance dividend of 1*s.* 6*d.* per share, less income tax, which, together with the interim dividend, will make 17½% for the year, leaving £26,597 to be carried forward. Our balance sheet is made up to September 25; since then I am glad to be able to tell you that our business continues to increase, and especially in the new depots which we have recently opened, both in receipts and the number of customers. We should, of course, take more money by increasing the prices of some of our goods, but we are averse to raising the price of anything we sell if it can possibly be avoided. Our policy has always been to buy the very best and to sell to the public at the lowest price. We are continuously improving our depots, and when normal conditions are again resumed there is no reason why we should not return to our former prosperity. I now beg to move the adoption of the report and accounts.

Sir Ernest Spencer, D.L., J.P. (Deputy-Chairman), seconded the motion, which was carried unanimously.

The dividend recommended was declared, and the retiring directors and auditors having been re-elected, the meeting closed with a hearty vote of thanks to the Chairman, directors, and staff.

NATIONAL SAFE DEPOSIT COMPANY, LIMITED.

The forty-third ordinary general meeting was held on November 11 at the Company's offices, 1 Queen Victoria Street, E.C., Mr. A. O. Miles, F.C.A. (the Chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: The accounts might easily have been stated to show an even better result, but we have preferred to take the opportunity of making out of the revenue of the year extensive repairs to the premises, decorative and otherwise, and also of installing what is practically a new lift for the service of the tenants of our offices. You will see by the profit and loss account that we have spent (including the amount required for aircraft protection and insurance) the sum of £1,265. Against this we had reserved £750 from last year's profits, leaving a balance of £515 expended this year, as against our normal expenditure of about £250 a year. This alone more than accounts for the difference in the net profit as compared with that of last year. It is a matter of satisfaction that our revenue from the letting of safes and the storage of packages shows a further increase over that of last year, which showed a considerable excess over that of the previous year. In connection with the protection from aircraft risk, I explained to you last year the precautions which we had taken, and which cost us a considerable sum of money. I have now to inform you that we have also taken out a policy under the Government insurance scheme and that consequently everything humanly possible has been done for the protection of our tenants. You will gather from the report how the board suggest that the available balance should be disposed of—namely, by paying a further dividend on the Ordinary shares at the same rate as heretofore and by the transfer of the usual amount to the leasehold sinking fund, and, further, by a transfer to reserve fund of £500, bringing this fund up to £3,500, and by the appropriation of £500 to a contingency fund, to be dealt with as the directors may determine or as the exigencies of the business may require. They further propose to allocate a sum of £500 to start a reserve for staff pensions fund, to be under the absolute control of the board, for them to deal with in the interest of their employees in such a manner as they may think best. After providing for the sums referred to, we carry forward £1,218, which is slightly in excess of that for last year. In conclusion, I should like to testify to the hard work put in by our not very numerous staff.

Mr. Henry J. Gardiner seconded the motion, which was carried unanimously after a brief discussion.

Culloden Consolidated Co.—Interim dividend of 2½% (actual), less tax.

Cory (Wm.) and Son.—Interim dividend on Ordinary shares of 4%, less tax.

Chargola Tea Association.—Interim dividend on Ordinary capital of 5%, less tax.

Ouvah Ceylon Estates.—Interim dividend at rate of 5% per annum, less tax, on Ordinary shares.

Djember Rubber Estates.—Interim dividend of 4%, tax free.

Haslam (John) and Co.—Dividend at the rate of 5% per annum, less tax, on Ordinary, making 5% for the year.

Klanang Produce Co.—Second interim dividend of 25% (actual), less tax, making a total of 45% this year to date.

National Safe Deposit.—Dividend at rate of 3% per annum on Ordinary, making 3% for the year.

Galaha Ceylon Tea Estates and Agency Co.—Interim dividend of 6% on Ordinary, less tax.

NEW ZEALAND.

A Wealthy Country, Splendid Climate, Fertile Soil, Plenty of Water.

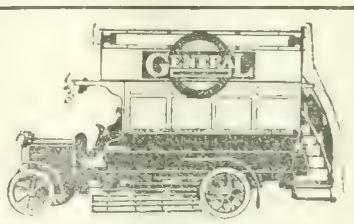
An Ideal country for the farmer, the percentage of grain and lambs being phenomenally high.

New Zealand, a country as large as the United Kingdom, with but a million population, has an annual export of raw products exceeding Twenty Million Pounds sterling.

NEW ZEALAND is rich in COAL, IRON, TIMBER, GUM, GOLD and SILVER.

Total yield of Minerals, over One Hundred and Twenty Million Pounds.

Over Eighteen Million Pounds have been advanced by Government to Farmers and Workers for Improvements and Buildings at a low rate of Interest.



The Railways, 3,000 miles, Telegraphs and Telephones, 124,000 miles, are owned and operated by the State.

New Zealand has the highest wealth-rate and the lowest death-rate in the World.

To those desirous of making a home in a new country New Zealand offers solid advantages.

Excellent Steamship Services are run direct to New Zealand by the Shaw Savill and Albion Company, Limited, New Zealand Shipping Company, Limited, and the Federal and Shire Lines.

OFF THE BEATEN TRACK IN LONDON.

No. 4.—BEHIND THE ABBEY.

Here is a corner of London remindful of a quiet cathedral town. The gateway by the Abbey towers gives access to Dean's Yard, Green" of Westminster School. The school is on the east, a medley of grey walls and old courtyards, extending from the Abbey cloisters, wherein it first arose, to Great College St. Beyond Dean's Yard, in Tufton St., is the Architectural Museum, least known of all our galleries. Burton St. leads by way of Cowley St. and North St.—all lined with early Georgian houses — into Smith Square, where stands St. John the Evangelist, with its four belfrys, like an inverted footstool. Victoria Tower Gardens should be entered for a sight of the grey river and old Lambeth Palace, and because in them is Rodin's Burghers of Calais.

By ROUTES Nos. 11, 11A*, 20, 24, 29, 29A, 76†, 88, to Broad Sanctuary.

* Sundays only. † Weekdays only.

LIVERPOOL COURIER

The newspaper of the business man of Lancashire and Cheshire. No business house of any standing is without it.

The organ of the wealthy classes of the North-Western Counties and of North Wales. Its influence is wide and far reaching.

It is the **best provincial medium for all classes of financial advertising.** Investors in a wide area can only be thoroughly reached through its columns.

An application to the London Manager, 187 Fleet Street, E.C., will bring details of Charges. Private wire to Liverpool is open day and night.

are Open Daily to receive Goods intended for Public Sale
Auctions on Owners' premises in all parts of the country are held as required.

SALES BY AUCTION.

By EDWIN FOX, BURNETT, and BADDELEY.
At the AUCTION MART, E.C.
On WEDNESDAY, December 15th, at 2, unless previously disposed of by Private Treaty.

CITY OF LONDON.
IMPORTANT FREEHOLD PROPERTY,
known as
Nos. 5 and 6, WALBROOK,
within a few yards of the MANSION HOUSE,
comprising
A MODERN BUILDING OF SIX FLOORS
Every substantial construction, with imposing elevation in Portland stone, with polished granite columns. The premises which are
EXCELLENTLY WELL LIGHTED
THROUGHOUT,
have a frontage of 30ft 10in., and contain a superficial ground area about
6,000 FEET
They are at present in the occupation of
THE CITY REFORM CLUB
and the SCOTTISH UNION and NATIONAL INSURANCE CO. The Building is so constructed as to lend itself to
PROFITABLE DEVELOPMENT
by certain alterations and the rearrangement of the Upper Floors as
SUITES OF FIRST CLASS OFFICES,
which it is estimated would produce, with the present letting, a total rental of at least
£9,000 PER ANNUM
It may, therefore, be fairly claimed that this property affords an
EXCEPTIONALLY ATTRACTIVE INVESTMENT
combining the essentials thereof, namely,
ABSOLUTE SECURITY
with
A GOOD RATE OF INTEREST.
The property may be viewed by cards, to be obtained of the Auctioneers and particulars, with plan and conditions of sale, of Messrs. Davidson and Morriss, Solicitors, 41 and 42 Queen Victoria Street, E.C., and of the Auctioneers, 12 Abchurch Lane, Bank, E.C.

MONEY.

THE great efflux of gold, more especially to the United States and Spain, and to a minor extent to South America, coupled with the advance in the rate for Treasury bills last week to 5%, and a notification from the Bank of England to the market that it is not disposed to discount bills at under 5½%, made the Money market very firm early in the week. The last few days, however, there has been a greater disposition to discount. Nevertheless, the lowest rate for three, four, and six months' bills is 5⅜% to 5¼%, while in many cases buyers are holding out for 5¼% for three months', 5⅜% for four months', and 5⅜-5½% for six months' bills. The somewhat lower rates now current than a week ago are due to the knowledge that the money recently raised by the British and French Governments in the United States is now available for the payment of Government purchases, and, furthermore, that a banking credit of £10,000,000 has been created against the deposit of collateral with the Bank of England. There has also been a good deal of talk this week about the creation of a very large credit in the United States against the deposit of American collateral.

What the result of this talk will be is unknown, but it is evident that some steps will be taken by means of which the adverse balance of trade with the United States will be adjusted either by the sale of American securities or by loans against the deposit of American securities. Obviously the sounder method would be the sale of securities, but if holders are indisposed to sell, then it may be necessary to resort to the deposit of the securities against loans. We are inclined to think, however, that when holders of American securities realise that sales of them will be of advantage to the country, they will be willing to provide all the securities needed. Immediately the American exchange situation is taken care of for some months ahead the demand for gold will become much more moderate. Nevertheless, one cannot altogether ignore the fact that Great Britain is buying large quantities of goods from every country that can supply them, and that all the time prices of commodities are rising, so that a given quantity of goods calls for increasing sums of money. It is true that the value of the imports into Great Britain has recently declined, but it would be a mistake to assume that this indicates the true course of the country's trade. It is essential to note that the deliveries of goods on Government account are steadily increasing, and that the total value of the imports is rising instead of falling. Moreover, it is obvious that many goods are being held back from market for higher prices, and that, with the increased prosperity of the producing countries, arising from their great sales at profitable prices, they possess the means of holding back their goods until the level of price is reached at which they are disposed to sell. Consequently it would be unwise to assume that even if the American exchange is adjusted the whole of the trade balance will be adjusted. It is probable, however, that arrangements similar to those now being made with the United States will be concluded with other countries. Indeed, it is somewhat surprising that an effort has not been made already to induce French investors to sell to Spanish investors sufficient Spanish bonds to provide for the balance of trade in favour of Spain and to prevent the recurring shipments of gold from London to Madrid. Doubtless as time goes on, and greater experience is gained, arrangements will be made for meeting adverse balance not by shipment of gold, but by sales of securities, and by greater economy in domestic expenditure.

BANK OF ENGLAND.

THE exodus of gold on foreign account has increased, and notwithstanding the receipt of nearly £800,000 from South Africa and Egypt the net loss of gold on foreign account for the week ended Wednesday was as much as £3,663,000. Most of this gold went to the United States, but substantial sums ebbed away to several other countries. Thus, during the week ended Wednesday the export to Spain was £750,000, to other Continental countries £250,000, to South America £180,000, and to Canada £34,000. Further, yesterday and to-day additional large sums have been sent, including £730,000 to the United States, £400,000 to Spain, £170,000 to South America, £100,000 to Japan, £57,000 to Canada, and some smaller amounts to other countries. On the other hand, £1,600,000 of foreign gold coin has come in, presumably from France. In consequence of £1,881,000 of gold having come in from circulation the net loss in the gold held by the Bank was £1,782,000, which reduced the total amount held to £53,570,000. There was a contraction of £185,000 in the note circulation, and the loss of reserve was £1,597,000, reducing the amount to £39,006,000. The Bank made advances, presumably to the Government, amounting to £4,094,000, and in consequence of this there was an increase of £1,223,000 in the public deposits and of £1,261,000 in the "other" deposits, notwithstanding the loss of about £1,600,000 of cash. The public deposits are now £50,181,000, the "other" deposits £91,676,000, and the "other" securities £101,761,000. The proportion of reserve to liabilities has fallen this week from 29.13% to 27.49%, partly in consequence of the increase in liabilities.

MONEY IN NEW YORK.

THE supply of money in New York is increasing all the time, and the reserve of the New York banks last week was £1,200,000 higher at £148,450,000, a figure which compares with £92,350,000 at the beginning of the year. The loans of the banks last week increased £6,300,000, and the deposits just over £7,000,000. Consequently there was a reduction of £540,000 in the surplus reserve, bringing the amount down to £37,760,000. Notwithstanding the increase of nearly 50% in the loans and of over 50% in the deposits since the beginning of January, the surplus reserve has risen from £23,000,000 to £38,000,000. Short money in New York can be obtained at about 2% and sometimes at less. Exchange this week has been strong in consequence of the availability of the money raised by the British and French Governments in America for the purpose of meeting their expenditures. Furthermore, a bankers' credit of £10,000,000 has been created against the deposit of collateral at the Bank of England, and additional credits are expected to be raised from time to time as the exchange situation demands. Yesterday the sight exchange from New York came at 4.68⅞, whereas a week previous it was 4.64⅞.

The Irving National Bank of New York notify us by cable that the following rates of exchange are current in New York:—

New York on —		Nov. 18	Par is usually quoted	Discount %
London	...	$4 85½	4 86½ dollars for £1	2·6

MONEY IN INDIA.

EXCHANGE on London remains strong at 1s. 4 32nd., and no difficulty is experienced in disposing of the 50 lacs of Council drafts that continue to be offered from week to week. The demand for money in India is steadily increasing, and this week another

83 lacs of silver were withdrawn from the Currency Department. This reduces the amount to 3,472 lacs. A year ago the amount held was 3,150 lacs. Since the beginning of August the amount of silver withdrawn has been 535 lacs.

The following are the minimum Rates of Discount current in India:—

Bombay ... 6 per cent. (Nov. 4, '15) Bengal ... 6 per cent. (Sept. 24, '15)

Particulars of the Tenders received and the Allotments made by the India Council on Wednesday last, November 17, are:—

Bills. Rate.	Tendered. Rs	Accepted. Rs.	%	Telegraphic Transfers Rate.	Tendered. Rs.	Accepted. Rs	%
1 4 5/16	94,970	94,970	100	1 4 1/2	16,00,000*	16,00,000	100
—	—	—	—	1 4	2,84,00,000*	29,05,030	10
—	—	—	—	1 4 5/16	4,00,000	4,00,000	100
—	—	—	—	1 4 1/8	10,00,000	—	—
Total ...	94,970	94,970	—	Total ...	3,14,00,000	49,05,030	—

* Deferred.

	Offered	Tendered	Accepted
Grand Total ...	Rs. 50,00,000	Rs. 3,14,94,970	Rs. 50,00,000

The Amount of Drafts disposed of and the Minimum Rates obtained were as follows:—

	Bills. Rs.	Average.	Minimum.	Telegraphic Transfers.	Rs.	Average	Minimum
Calcutta ...	60,000	1,4.031	1/4	Def.	12,61,000	1 4 009	1 4
Bombay ...	10,000	1,4.031	1 4	Def.	25,44,030	1 4 005	1 4
Madras ...	24,970	1,4.031	1 4	Def.	9,00,000	1 4 029	1 4
				Imm.	4,00,000	1,4 062	1 4 1/8

From **April 1** to **November 16** inclusive the Council granted remittance for **Rs. 8,40,86,061**, realising £5,607,465. Up to **November 17** of the financial year the total bills and Transfers sold was **Rs.6,30 56 861**, realising **£4,206,230.** The total sales for the week ended **November 16** amounted to **Rs. 50,50,000**, realising £ 37,395. The amount to be offered for tender next Wednesday will again be 50 lacs.

SILVER.

The Silver market has been strong, and the price has risen from 24 7/16*d.* to 25*d.* This advance is due primarily to the smallness of the supply when the demand for silver coinage both here and on the Continent is unusually heavy. The special reason for the advance this week was the receipt of buying orders both from India and China when it became known that the stock of silver in London had been reduced to only £750,000, a much lower figure than was supposed.

	Nov. 12	13	15	16	17	18	19
London ...	24 7/16	24 7/16	24 1/2	24 9/16	24 9/16	24 5/8	25

Exchange ...	1/4 3/32	1/4 3/32	1/4 3/32	1/4 3/32	1/4 3/32	1/4 3/32	1/4 3/32

Stock Exchange.

An official notice was published November 17 respecting the new French 5% Loan, an unstated amount of which will next week (on November 25) be offered for public subscription. The issue price of the 5% Loan is fixed at 88%.

In Parliament on November 17 the Chancellor of the Exchequer gave the approximate amounts of 4½% War Loan that had been issued in conversion of Consols, Annuities, and 3½% War Loan. The outcome of the conversions is tabulated below:—

	Previously at Issue £	Exchanged for New 4½% War Loan £	Approximate Amount Annuities £
Consols, 2½% ...	541,046,896	[illegible]	337,047,000
Annuities, 2½% ...	[illegible]	7,500,000	[illegible]
,, 2¾% ...	[illegible]	1,000,000	2,834,000
War Loan, 3½%	[illegible]	135,000,000	215,000,000
,, 4½%	[illegible]	—	[illegible]

Respecting last week's meeting of members of the Stock Exchange, and the appeal to the Committee, it is urged on us that the whole matter largely depends upon legality. On this point we dwelt in The Statist of November 6. May we point out that if the Committee were even to adopt a policy of readmission *en bloc* of existing naturalised members, it rests with the Stock Exchange as a body whether or not the members will deal with naturalised Englishmen, descended from German or Austrian families, who have given no pledges of honourable adherence to the obligations they are under as naturalised Englishmen. As to legal measures on the part of a member whose membership is continued and who fails to do business and throws up his membership, subsequently appeal to law against fellow members who would not deal with him, that is out of the question.

Members of the Stock Exchange are looking forward to early announcements of other modifications; first, it is considered probable that Treasury relaxations in regard to minimum prices will be made; and, secondly, it is hoped, and also expected, that there will be relaxation of the regulation whereby a vendor has to pass to the broker not only the name of the registered vendor-proprietor, but the number of the shares, and be modified to the giving of the name alone, and this will save an immense amount of trouble in respect of numbers having to be passed through perhaps three or four hands.

One active market in particular that has shown retention of strength, with an increasing volume of public interest, has been that for rubber shares. The price of the commodity has been steadily advancing, and this week a distinct further upward movement has taken place, the price for the standard quality of plantation rubber advancing to 3*s.* 0*d.* "spot." In the early part of the year the same quality was in the region of 2*s.* per lb. In subsequent pages we deal with the rubber position and give some information as to bases for estimating probabilities as to the future values of shares.

The volume of business in the general Stock markets has distinctly fallen off this week, and though there has been no decided movement in prices, changes have been irregular, with more instances of decline than of improvement. The trend of the market for American securities has alternated but little. On any decline buyers come forward both for Railway bonds and shares, and also industrials. The "munition" industrials have again fluctuated considerably, and New York appears to be doing a large business both in such securities and generally.

The banks, if they have not yet actually come to an agreement, contemplate the action, from the first week in December, of closing at three o'clock instead of four. If this action be taken, as is considered certain, it will be necessary for the revision of Stock Exchange hours, and simultaneously with the conferences of bankers there have been meetings of members of the Stock Exchange Committee, so that any action on the part of the bankers will be simultaneous with revision of Stock Exchange hours.

AMERICAN INDUSTRIAL BOOM.

ITS SHARE MARKET EFFECT.

Many manufacturers in this country, even though they have secured business that has taxed their works to the utmost and from which they have derived large profits, as well as less successful firms and undertakings, cast envious eyes at the large amount of business that, consequent on the War, has been passed over to American undertakings of kindred character. Exceptional profits on this side will doubtless be largely eaten into by the operation of the excess profits tax, but in the United States such eating away of profits has not to be faced. It is interesting in this connection to observe the very remarkable market movements that have occurred in the prices of American industrial securities that have benefited, more or less, directly from the War. It may be that in some directions the enormous rises that have occurred in prices of shares of companies since the beginning of the year have been due to absorptions of kindred businesses, giving greater ability on the part of the absorbing companies to take

large orders. But apart altogether from the various reasons, which in some cases may be of quite exceptional character, a record of price movements this year gives a clue to the extent of activity that has been witnessed in the American Stock markets, and New York in particular. In the schedule we give below we set out the lowest prices recorded, mostly early this year and chiefly in January, and contrast these with the highest quotations that have been touched quite recently, generally in October. In several directions a reaction from the best has occurred, more particularly in those descriptions where extravagant rises had occurred. But recovery after the reaction has of late been a feature of this group of American securities. Bethlehem Steel Ordinary, for instance, on October 22 recorded the highest price of 600, from which figure there was a reaction of about 30%, and the latest cabled advice records the price as 485. General Electrics have reacted about 9, while United States Steel Common and Preferred have well maintained their rise. General Motors have this week spurted, and touched a record price.

WESTERN RAILWAY OF HAVANA.

THIS Company has been able to work with much greater economy in the past year, for with an increase of only £1,307 in gross receipts the gain in profit comes out at £3,097. The saving in expenses was as much as £9,348, or nearly 6%. For many years regular 7% distributions have been forthcoming, and whilst repeating this rate in respect of the past twelve months the directors propose to transfer £10,000 to reserve and £5,000 to general renewals reserve, against nil a year ago. To enable these reserve augmentations to be made, however, the balance carried forward is lowered from £22,071 to £15,535. The Company depends for its income more upon tobacco than sugar, and as the crop is a poor one, and the trade generally adversely affected by the War, the earnings of the line are showing some falling off compared with a year ago. The fact, however, that the balance brought forward has been reduced by over £6,000 seems to indicate that the directors do not take a gloomy view of the outlook. Unfortunately, they say, there is little prospect of an immediate revival of the tobacco industry, large stocks remaining in the warehouses unsold, and the growers being reluctant to plant fresh crops with little or no prospect of being able to dispose of their produce at remunerative prices. On the other hand, an improvement in sugar traffic may be looked for. The electrification of that portion of the line between Havana and Rincón referred to in the last report, which was opened to traffic on June 15 1914, has, despite the depression prevailing in the western end of the island, shown good results, and has in a large measure assisted the Company in maintaining its position.

Mining Topics.

THE uncertainty in connection with the Balkan situation has this week tended to depress prices in the general Stock markets, and sympathetically in the Mining department. Changes in prices of Rand shares have been unimportant, but the tendency as a rule has been dull, with here and there exceptions. Amongst the exceptions in the South African department must be noted Modder Deeps, and City Deeps have also held their ground well.

An item of news this week is that Mr. H. C. Boyd, representing the Central Mining group, has been elected to a seat on the boards of the Modderfontein Deep and the Geduld Companies. We believe this is the first time that a direct interest has been taken

by the Central Mining group in what is known as the Goetz group of companies. We have recently dealt with the position of both these mines, our observations upon Modder Deep appearing in our issue of October 16, and upon Geduld November 13.

The meeting held in Johannesburg to consider the Robinson Deep scheme, which was dealt with *in extenso* in THE STATIST of September 25, approved the carrying out of the acquisition of the Booysen's area.

South African advices refer to leaders of the diamond industry taking steps to bring about a partial resumption of operations in the diamond industry. Apparently this step is contemplated to commence from the beginning of the new year, and a resumption of work will be effected at one of the De Beers four mines, the Jagersfontein, and possibly also the Premier. About simultaneously to the receipt of cabled advices in this country to the above effect the market for diamond shares experienced a reaction, it perhaps occurring sympathetically with the general trend caused by the discomforts of the War and political situation.

An exceptionally strong department has been that for copper shares, due to the steady appreciation of late in the price of the metal, and in respect of American shares reiterated rumours of a merger or mergers of United States controlled copper companies. We have previously referred to these rumours, but nothing is, as yet, definitely ascertainable as to what is really intended, although we note that rumoured amalgamation arrangements are now supposed to include the Braden Company, whose property is situated in Chili. Rio Tintos, sympathetically with the rise in American shares, have been distinctly in request, and have improved from a level of about 54 to nearly 58. New York and also Boston have fanned the speculative fever that exists on the other side of the Atlantic. Anacondas have been in strong demand, and have been steadily rising for some time past. Of course, since its incorporation of the old Amalgamated Company, the Anaconda has become the premier copper security of the world. The group of mines which forms the "Anaconda" has in the past produced more copper annually than any other mining corporation.

Rhodesian and West African shares have been somewhat out in the cold this week, and prices have reacted, more especially in Rhodesian shares. Chartered, which lately appreciated to near to 11*s.*, have had a set-back to under 10*s.* The old-time disposition to speculate in Chartered shares seems temporarily abandoned, and, indeed, as to Rhodesian gold mining shares, there is absolute indifference on the part of the speculative plunger as to what may be shown in the monthly crushing results.

In the tin section some benefit has accrued from the movement of price of the metal, in which for some time past there has been a rising tendency. Respecting our remarks upon the Malayan Tin Dredging Company last week, the Company has declared a dividend of 1*s.* per share, payable on the 30th inst. Little attention has been given to Broken Hill shares of late, and apropos of the production of these companies, the prices of lead and spelter included in the following contrast of metal prices will be found interesting:—

	Now	A Week Ago	A Month Ago
	£	£	£
Copper	79⅞	77½	72½
Lead	27	26¼	24
Tin	174⅜	172⅝	150½
Spelter (spot and forward)	90—82	90—84	68—59

Mount Lyell.—Cable advice received this week reports that a cross-cut at the 1,200-foot level of the North Mount Lyell mine has traversed 57 feet of continuously rich ore—a significant piece of news inasmuch as the level in question is the lowest in the mine, and was commenced this year.

"JOHNNIES" GROUP.

THE following abridged information is excerpted from the quarterly reports for September just to hand:—

CONSOLIDATED LANGLAAGTE.—The total number of coloured labourers employed has increased from 3,046 at June 30 to 3,905 at September 30. At the west shaft the South Reef has been intersected at the 10th level, and driving on reef begun. At the point of intersection the reef showed a value of 15.5 dwt. over 26.5 inches. The development throughout the mine continues to expose reef of satisfactory value.

GOVERNMENT AREAS.—The development of the mine continues to expose ore of good value, and the payable reserves were increased during the quarter by 111,400 tons. [At June 30 the pay reserves were 2,256,349 milling tons.] In addition to the ordinary development, a considerable amount of work is being carried out underground in order to prepare the mine for the increased reduction plant which is now on order. The excavations for the additional plant are nearing completion, and good progress has been made with the foundations. Certain portions of the plant have already been shipped, and will shortly be arriving on the property.

NEW UNIFIED.—Steady progress is being made with the development of the South Reef, and some encouraging values have been exposed. Over 50% of the ore mined was drawn from the Main Reef, thus conserving the richer Main Reef Leader and South Reef. An additional tube was put to work during the quarter, making two tubes and 60 stamps. The mill is being reconditioned, which will take some three or four months, during which working costs will be somewhat above the normal figure. When completed, the capacity of the reduction plant will be somewhat increased.

VAN RYN DEEP.—The main haulage north-east from 7th level east has attained a length of 747 feet. This haulage is rendering available for stoping a large area of ground which has been proved by winzes to contain ore of exceptionally good value. The haulage will connect with 5th level at a point about 1,000 feet from the eastern boundary of the mine. The driving of the 5th level east has been resumed, and has exposed reef of good value, and of width considerably above the average stoping width of mine. At the west shaft improved values have been exposed in the No. 1 winze from 5th level west, and the 7th level is being driven in ore of high grade.

BRAKPAN MINES.

THE original owner of farm Brakpan (166), in the Eastern Rand, was the Transvaal Coal Trust, which after preliminary bore tests disposed of the gold rights over the all-reef-bearing farm, comprising 4,056 acres, to the Brakpan Mines, Limited, which was formed in February 1903 with a capital of £660,000. The new owners continued boring and selected an initial portion of the total farm for its mynpacht, a vergunning, &c., mining area. About two years later it decided, and obtained the consent of the Government, to modify its mining area. About the same time, that is in 1905, it bought additional adjoining mining areas immediately to the north of its mynpacht ground. The position of its mining claims is to the south of the Van Ryn Deep, to the west of the Government Areas ground, and to the east of the Apex Mines, now belonging to the New Kleinfontein Company. The plan herewith gives the area of the mynpacht claims only.

The present mining area of the Brakpan consists of 1,150.45 claims, and the Company also possesses gold rights in respect of the remainder of the farm, which was proclaimed a gold field in 1907. In the ordinary way the Company would be entitled to receive one-half the mining dues payable to the Government for mining rights, but in case some lease arrangement should be come to by the Government a modification of terms may be arranged.

Although the Company had not issued all of its authorised £660,000 of capital at the time, in 1905, it obtained additional area, and elected in that year to increase its capital to £750,000. The initial issue of shares to vendors, plus shares issued as consideration for the additional ground taken up, absorbed 328,514 shares. For working capital 121,486 £1 shares were issued at various premiums, and the financial history of the Company and the total amounts

that have been authorised and expended by the Company are as given below:—

On formation of Company, February 1903, capital fixed at £660,000, in £1 shares.

	Shares	
To vendors	260,000	Original area.
„ „ (1905)	68,514	Additional area.
Total	328,514	
1903. Working capital ...	250,000	@ 40/- per share.
1905, Feb.: Option shares...§	50,000	@ 50/- „

May 1905, capital increased to authorised £750,000.

1909. Issued	60,000	@ 50/- per share.
„ Option exercised ...	15,000	@ 55/- „
1910. „ „ ...	15,000	@ 60/- „
„ Final issue	31,486	@ 55/- „
	750,000	

The cash resources obtained through share issues, together with interest, &c., receipts and profits applied to capital, may be put at:—

	£
Par value of shares issued	421,486
Plus premiums	526,350
Also interest, &c., receipts, say	130,898
Profits applied to capital outlay	158,721
	1,237,455

After relocation of its mynpacht shaft sinking was commenced. There are two shafts, No. 1 to the north and No. 2 some 4,400 feet to the south. In the No. 1 shaft reef was met with, September 1907, at a depth of 3,098 feet. Apparently this was in disturbed ground, for the showings were very poor—2¼ dwt. over a width of 24.5 inches. By underground boring at No. 1 shaft a dyke was passed through and reef again picked up of much better quality, showing 9.22 dwt. over 34.3 inches. In July 1908 shaft No. 2 intersected reef at a depth of 3,695 feet showing 16.38 dwt. over a width of 81,75 inches.

These two shafts are connected by an incline, and the various levels are driven from east and west. The borings showed that the reef is sometimes not in one compact mass; as, for instance, in Bore B to the east the intersection by the bore, May 1903, at a depth of 3,360 feet indicated 3¾ inches in Leader, value 36½ dwt., next 32 inches of barren quartzite, and then a further 36 inches of reef averaging 6½ dwt.

The Company steadily pressed on with development work and made early preparations for the erection of reduction plant of most modern pattern. Mill, tubes, cyanide appliances, &c., are located in the region of the No. 2 or southern shaft. The initial idea was to put up a mill of 160 stamps with room enough for a further 40 stamps. After early showings the decision was come to to add 40 stamps to the 160, but, experiencing signs of existence of poor zones, the mill ordered was disposed of and the idea of enlargement of plant abandoned. Before dealing with results since milling commenced in the middle of 1911 we may be permitted to present the features of the growth of ore reserves and the showings of developments since the beginning of 1912.

The pay-ore reserves prior to 1914 were calculated over assumed stoping widths to average 61 inches. For 1914 the width was increased to 62 inches. The reserves at December 31 have been reported as under:—

	Payable		Unpayable	
	Tons	Value s. d.	Tons	Value s. d.
1909	687,645	26 1	255,803	8 0
1910	1,720,181	27 9	746,965	8 10
1911	1,925,346	28 7	1,224,014	8 10
1912	2,457,000	28 7	1,806,000	9 7
1913	2,242,000	28 6	2,402,000	10 3
1914	2,490,000	28 7	5,211,000	9 9

It will be noted from the above that the accumulated quantity of unpayable ore is growing rapidly. It has to be recognised it is an *accumulation*, and though the aggregate of 5,211,000 tons termed "unpayable" had but a value of 2.3 dwt., an average that is quite unpayable, some of the ore above the average of the low grade, when it is in close juxtaposition to good-grade deposit, may be passed through the mill and be profitably used.

The development showings vary considerably, and the percentage of payable showings is such that a large allowance must be made in calculations as to the life of the property.

	Total Footage Sampled	Payable Footage on Reef	Payable Shoots: Percentage of Total	Payable Shoots: Average Width Inches	Payable Shoots: Average Value s. d.	Stulling. Inches
1912	12,619	7,895	63	39.6	50 2	1,928
1913	15,793	6,951	44	36.8	47 7	1,758
1914	17,515	6,945	40	41.5	55 8	2,502
1915.						
March qr. ...	4,260	2,175	50	48	70 0	2,888
June qr.	4,685	2,620	57	54.2	102 5	3,506
Sept. qr.	4,425	2,115	47	27.11	95 2	2,578

Though the mill itself has not been so far used to full stamping power, it is one of 160 stamps. An average of 10 tubes is now being used.

Results since start, June 3, 1911, have been reported as under:—

Years Dec. 31 Sps. Period 1911	Tons Sold	Mille. mg %	Revenue Amt. £	Revenue Per Ton £	Expenses Amt. £	Expenses Per Ton £	Profit Amt. £	Profit Per Ton £	Price end of Period
(7 mos.) 100	241,204	14¼	332,237	27/6	221,260	18/4	110,977	9/2	25/-

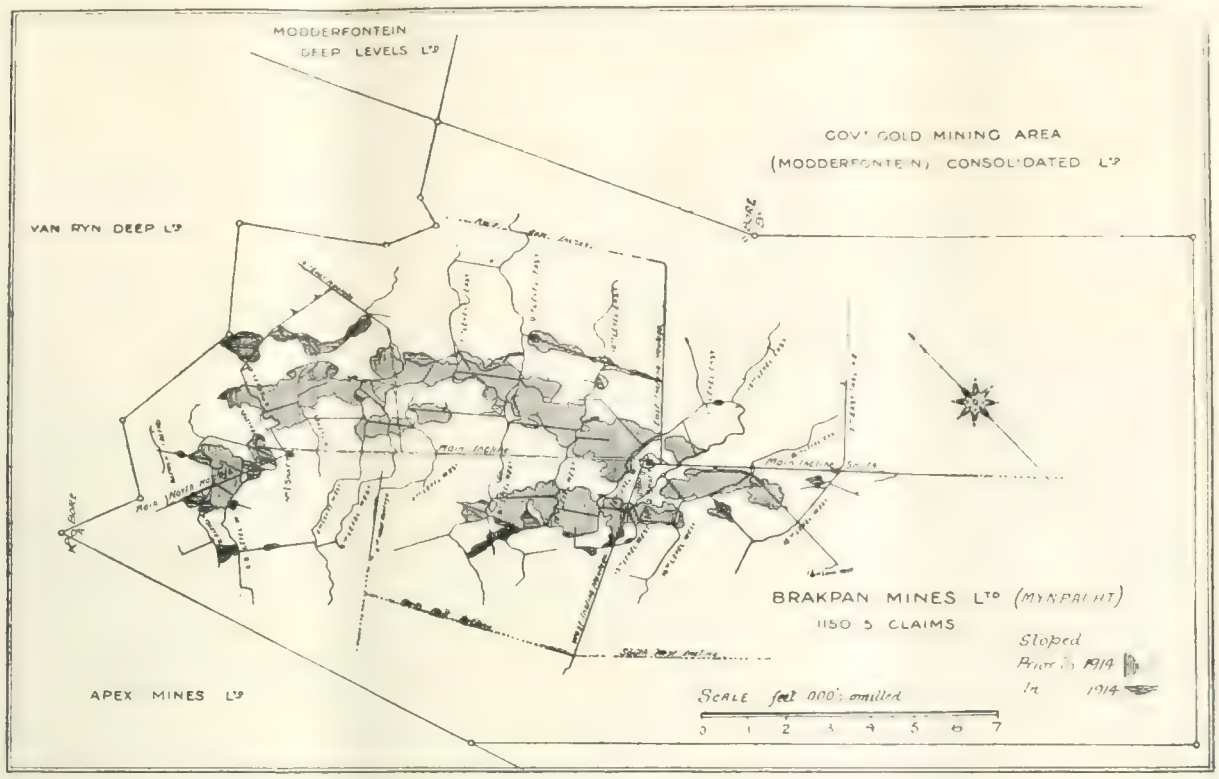
Oct. ... —	64,000	—	90,038	28/1	56,927	17/9	33,111	10/4	3 2

The contrast of results of the last two years is set out below:—

Year to Dec. 31	1914	£	Per Ton	1915	£	Per Ton
Gross revenue	(621,573 tons)	859,117	27/7	(613,269 tons)	865,315	28/3
Expenses		575,661	18/6		574,524	18/9
Mine profit		283,456	9/1		290,791	9/6
Sundry revenue...		3,026			14,909	
		286,482			305,700	
Capital account & Depreciation	£ 4,260			£ 10,543		
Develop.Susp. a/c	11,683			14,851		
Profit, &c., taxes	25,873			26,770		
Divs. June (12½%)	93,750			(20%) 150,000		
„ Dec. (17½%)	131,250			(12½%) 93,750		
		266,816			295,914	
Surplus		19,666			9,786	
Balance brought forward ...		60,876			51,090	
Balance carried forward ...		80,542			60,876	

To the foregoing actual figures we may add an estimate of the 1915 results, based on ten months actual and the final two months estimated. The calculation on conservative bases is as under:—



Estimate for **1915.**

	£	Per Ton
Gross revenue	(782,000 tons) 1,017,000	27 9
Expenses	656,000	17 11
Mine profit	359,000	9 10
Sundry revenue	3,000	
	362,000	
Depreciation, &c.	£6,000	
Taxes	36,000	
	42,000	
Net profit for appropriation	320,000	
Interim dividend June 1915, 17½% ...	131,250	
Final „ Dec. 1915, 22½% ...	168,750	
	300,000	
Surplus	20,000	

As a policy of mill extension has been abandoned, no setting aside of profit to capital purposes requires to be allowed for.

The General Manager's report as to 1914 operations set out that the amount of ore hoisted was, in round figures, 706,000 tons, and he stated "the tonnage mined represents an extent of area equivaelnt to 20.78 claims."

Taken by itself this statement looks as if the contents of the area were equal to about 34,000 mine tons per claim, or, making an allowance of 20% for sorting, &c., approximately 27,200 mill tons per claim. Of the quantity hoisted the Consulting Engineer reported that 72.4% had been derived from the payable reserve, as against 77.4% during 1913. This point has to be borne in mind, also that the proportion of pay ore of the total footage sampled in 1914 was

only 40%; in 1912 it had been 63%. In calculations that persons interested in the Company's property might make the basis of applying the quantity hoisted to the claim area exhausted would be entirely fallacious. We still think that the calculation we put forward in our "Mines of Africa" as to the pay contents of the mine, though very conjectural, is, in the circumstances, based on reasonable lines. In such calculation we based what we have termed "guess-work" on assumption of an 8 degrees dip and stoping width of 61 inches, and after allowing 15% for sorting we estimated the net mill tons per claim at 24,900 tons. But then we further safeguarded the calculation by roughly assuming that only about 50% of the claims contain payable reef. The total area of the Company's mine is 1,150 claims. If we apply 24,000 mill tons only to, say, 580 claims the initial quantity contained in the property works out as:—

	Mill Tons
580 net claims × 24,000 mill tons per claim...	13,920,000
Used to December 31, 1914	2,110,000
Remaining at January 1, 1915	11,810,000

We would, however, call attention to a statement of the Chairman at a meeting of the Company, held May 25 in Johannesburg, as to the ore contents of the 441 claims to end of 1914 opened upon:—

> "You will, therefore, be interested to hear the result of a recent calculation, which indicates that, on the basis of present working conditions, an average of about 10,000 mill tons of profitable ore per claim will ultimately be extracted from the 441 claims so far opened."

In above calculation we deduct approximately half of the total 1,150 claims, and in respect of remaining 580 claims we estimate the contents as 24,000 mill tons. Or, in other words, whereas the Chairman referred to a calculation of 10,000 mill tons per claim on a developed area of 441 claims, we refer to 24,000 tons per claim on half the total mining area of the Company proving payable. Putting the matter in another way, our calculation is 12,000 mill tons, compared with the Chairman's 10,000 tons per total claim. Taking only 10,000 payable mill tons per claim the outcome would be:—

	Mill Tons
Total area, 1,150 claims × 10,000 tons	11,500,000
Used to December 31, 1914	2,110,000
Remaining at January 1, 1915	9,390,000

Applying continuance of present rate of output of 730,000 tons a year to the quantity remaining to be mined, it would mean, on our figures, approximately 16 years' life, and on the 10,000 net pay tons per claim the Chairman gave a life of 13 years.

The issued capital of the Company is £750,000, in £1 shares, and the present price of the shares is about $3\frac{3}{8}$.

Assuming 40% annual distributions for a life of 16 years, and that the investor desires 10% income, and sets aside any excess of dividend and invests it at 5% for redemption of capital at end of life, the present value of the share works out about $2\frac{13}{16}$.

Should the life be 13 years the same basis of calculation shows a present value of about $2\frac{5}{8}$.

MESSINA (TRANSVAAL) DEVELOPMENT.

Last year's report disclosed that the financial position of this copper-mining undertaking had been greatly jeopardised by the administration controlling the Company up to the beginning of June 1914; but although a very bad financial condition had been created, it was believed that by the sacrifice of about a year's profit the damage could be remedied. This expectation has been borne out by events. Unfortunately, however, it would appear that the maladministration of the old *régime* was not confined to misdirection of the Company's finances, for the new directors' annual report for the year to June 30, 1915, or rather the technical reports accompanying it, disclose a greatly impaired mining position. Indeed, the report dated August 26, 1915, made by Mr. A. F. Kuehn, a member of the Technical Committee, reveals a very weak condition of the mine. He states that the mine "is suffering from a past over-production"; but

a far more serious circumstance than this is the fact that the ore reserves in the course of a year have been cut in half, and now represent less than two years' supply for the mill capacity. At the meeting of the Company a year ago the new Chairman said: "For the moment development is being curtailed. . . We have come to the conclusion that it is more important to have cash at the present time than to maintain or increase our ore reserves, and you must not think the mine is coming to an end should, at this time next year, the ore reserves be reduced; you must regard the phenomenon, should it occur, as part of a deliberate policy adopted at a time when affairs throughout the world are abnormal and when money is scarce." In view of this one would not have been at all surprised if the ore reserves had been depleted to the extent of the tonnage mined during the year; but we have a decline in the tonnage of the reserves that far exceeds the quantity of ore taken out of the mine, and, in addition, the average value of the ore reserves has declined considerably. The reports now issued adopt throughout the "long" ton of 2,240 lb., whereas previously "short" tons of 2,000 lb. were used. This makes comparison with the past difficult. However, in the following table, showing the ore reserve estimates of the last five years, we have turned the short tons into long tons so as to give a true contarast with the present position.

Ore Reserves.

At June 30	Proved		Probable		Total Proved and Probable	
	Ore Long Tons	Contents Value	Ore Long Tons	Contents Value	Ore Long Tons	Contents Value
1911*	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
1912*	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
1913*	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
1914*	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
1915†	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

* [illegible]

† Estimate of ore reserves before allowance for sorting (18% in 1914-15).

‡ [illegible]

The position in reality is more unsatisfactory than shown in the above table, for the ore reserve estimate of June 30, 1915, includes waste that will be sorted out after mining, whereas previous estimates did not include such waste. The General Manager's report states that 20% must be deducted from the latest tonnage estimate to arrive at a true basis of comparison. That is to say, the net milling ore reserves at June 30, 1915, were estimated to be 140,000 tons, in comparison with 348,210 tons a year previously—a difference of no less than 208,000 tons. How is this accounted for? The General Manager's report states that the unsorted ore mined in the year to June 30, 1915, was 89,505 tons, averaging 7.3% copper, and, on the other hand, 31,900 tons of ore assaying 4.8% copper were developed, which means that the ore reserves should have been depleted during the year by about 56,600 tons of unsorted ore, equal to 45,300 tons of milling ore. Actually, as we have shown, the depletion in the estimated reserves amounts to 208,000 tons. Presumably, then, the ore reserves estimate of June 30, 1914, had been overstated to the extent of about 162,000 tons, or by nearly 50%—a most disquieting disclosure.

The amount of development work done during the year to June 30, 1915, was small owing to the necessity to curtail expenditure. The footage in ore was only 348 feet, the average value being 7.7% copper over 42 inches width. This compares with past disclosures as under:—

Year to [illegible]	[illegible] ft.	[illegible]	[illegible]
[illegible]	1,533	[illegible]	60
[illegible]	1,559	[illegible]	[illegible]
[illegible]	[illegible]	440	30
[illegible]	[illegible]	48	42

We have dealt with the mining position first because the state of affairs disclosed in the technical reports will be the governing factor affecting the milling results of the future.

For the past year to June 30, 1915, thanks to the high price realised for the copper output, a profit was earned sufficient to enable the financial position of the Company to be greatly strengthened. The quantity of ore milled for the twelve months amounted to 74,565 tons, against 52,511 tons in the previous year, and the result was that the copper contents of the concentrates and matte produced in the past year rose to 5,330 tons in comparison with 4,007 tons in 1913-14. The progress of producing operations in the past five years is shown below, the tons given being long tons in all cases:—

Year to June 30	Ore Treated Tons	Av. Grade Copper %	Concentrates Produced Long Tons	Concentrates Produced Av. Assay %	Matte Produced Long Tons	Matte Produced Av. Assay %	Total Copper Contents Yield per Ton Long Tons Treated Tons	Total Copper Contents Yield per Ton Long Tons Treated %
1911 ..	19,585	10·95	2,235	50·8	—	—	113½	6·8
1912 ...	9,258	9·0	1,037½	49·8	—	—	516¾	5·6
1913 ..	20,179	10·14	3,126	43·8	—	—	1,475	7·3
1914 .	52,511	8·5	8,900	40·7	668¾	58·0	4,007	7·6
1915 .	74,564	-	12,117½	39·9	872	57·0	5,330	7·1

The General Manager's report states that the extraction obtained in the past year showed considerable improvement, so that the decline in the yield of copper per ton of ore treated does not completely reflect the lower value of the ore mined. Nevertheless, from the figures we have previously given of ore reserves it will be noted that the average copper contents of the ore mined were considerably above the average value both of the ore developed in the year and of the ore reserves. Consequently, a further reduction of the grade of the ore milled is to be expected, though further improvement in extraction may slightly offset the effect on output.

As regards earnings and profits, the price realised per ton of copper was about £73½ in the past year, against £68⅝ in the preceding twelve months, a factor which, combined with the larger output, materially contributed to the expansion of revenue. In addition, working costs, including 5*s.* per ton milled for development, and a large sum for depreciation and other charges, were reduced to 53*s.* 5*d.* in the past year, against 60*s.* 6*d.* in 1913-14. As a result of the larger output, higher price of copper, and reduced working costs, the working profit of the past year increased to £130,526, in contrast with £60,690 in the previous twelve months:—

Year to June 30	Value of Output	Total Working Costs		Working Profit		Price of Copper per cent. of Period
	£	£	*s. d.*	£	*s. d.*	*s. d.*
1911....	57,050	[illegible]	[illegible]	[illegible]	[illegible]	25 0
1912....	29,761	[illegible]	[illegible]	[illegible]	[illegible]	18 3
1913....	93,786	[illegible]	[illegible]	[illegible]	[illegible]	30 0

* [illegible]

† [illegible]

‡ Loss. (*a*) Price of old £1 shares on basis of present 5*s.* shares.

Of the past year's profit, £15,000 was absorbed by Debenture interest and £25,468 went for income and profits tax. The balance of £90,058 has been used for the purpose of strengthening the financial position, £58,000 being written off for loss on loan and deposit accounts, £23,304 on account of shaft sinking and railway outlays, and £8,753 being carried forward. In addition, against only £8,053 expended on development, £20,681 was written off out of earnings. The balance sheet at June 30, 1915, after being thus strengthened, showed liquid resources as under:—

	£	£
[illegible]		169,662
[illegible]		3,334
		172,996
[illegible]	£6,819	
[illegible]	109,173	
[illegible]	26,681	
		142,673
Surplus		30,323

Of course, the above financial position is none too strong, as the financing of the annual output until its sale necessitates the employment of considerable resources. Furthermore, Mr. Kuehn considers the expenditure of £17,450 on capital account to be necessary for attainment of a maximum production and efficient practice. Then the mining position necessi-

tates the adoption of a vigorous development policy and the raising of the development redemption allowance to about 10*s.* per ton of ore milled, providing, say, £50,000 per annum. This will have to come out of profits, as the development and shaft sinking accounts in the balance sheet already figure for £78,706, representing as much as 11*s.* 3*d.* per ton of the milling ore reserves. Finally, Debenture redemption at the rate of £35,000 per annum commences from July 1, 1916.

As regards the future, Mr. Kuehn estimates that by being "forced" the mine can produce 92,400 tons of 6.2% copper, against 89,500 tons of 7.3% copper in the year to June 30 last. The profit that may be made depends upon the price realised for the metal, but in any case the heavy development and capital charges will be a severe handicap. Having regard to the ore reserve position and the development results, it is not surprising to find that Mr. Kuehn's conclusion is not over optimistic. He says:

> "Barring the possible find of Bonanza shoots, I look upon the undertaking as a producer of from 90,000 to 95,000 tons of ore per year for a period of eighteen months to two years, and thereafter, probably, a smaller annual rate."

The Company has an outstanding 6% Debenture debt of £250,000, the redemption of which at the rate of £35,000 per annum commences next year, and its issued capital is £181,788, in 5*s.* shares. The market price of these shares is 12*s.* 6*d.*, denoting a premium of 150%, which does not appear to be justified by the present condition of the mine.

Bantjes.—Recent developments are shown below:

	Main Reef Leader: Distance Exposed Ft.	Width In.	Assay	South Reef: Distance Exposed Ft.	Width In.	Assay
1914	1,[illegible]	2	[illegible]	2,540	13	79 10
1915, Mar. qr....	575	20	42 [illegible]	1,338	14	51 8
,, June qr....	835	14	46 7	1,245	10	71 5
,, Sept. qr....	1,165	15	[illegible]	1,115	14	58 5

The development showings and working results have indicated that this Company is experiencing great discomfort, and is barely able to secure a profit. The pay reserves are being eaten into very considerably, the new quantities brought into sight being much less than those mined. In the main, developments in the past have been in respect of South Reef, but this policy of attacking the South Reef is to be modified, and steps are being taken to increase the amount of development effected on the Leader. An arrangement has been come to with the Main Reef West Company, whose property is to the east of the Bantjes, to drive on to the Leader in the Bantjes region at an horizon some five or six levels below the level at present attained in the Bantjes ground. In the circumstances, with a view to conserving resources, the sinking of the main shaft is discontinued. All expenses have been cut down to a minimum, and even the directors' fees have been reduced to one-half.

ABOSSO.

THANKS entirely to a large increase in the quantity of ore milled, the working profit earned by this West African gold mine for the year ended June 30, 1915, rose to £33,138, in comparison with £27,105 for the previous year. The grade of the ore milled, which has fallen steadily for the past six or seven years, reached only 34*s.* per ton, against 34*s.* 8*d.* in the previous twelve months. As regards working expenses, economies introduced were more than offset by increased charges due to the War, the total cost figure, including development redemption, amounting to 28*s.* for the past year, against 27*s.* 9*d.* in 1913-14. Strictly speaking, the rise in working costs was greater than this, for while a sum of £22,275, or 4*s.* 6*d.* per ton milled, was debited to working costs, the actual expenditure on development for the year amounted to £28,323, the difference of £6,048 being added to the balance-sheet item representing mine development, which now stands at £56,735, equal to 4*s.* 2*d.* per ton of ore reserves. In 1913-14 development outlay exceeded the redemption allowance by £4,800, so that in the two years nearly £11,000 of development expenditure which should have been debited against earnings has been charged to capital account.

The total profit of the past year, swelled by a substantial addition to sundry revenue through treatment of a large quantity of ore for the Cinnamon Bippo Company, amounted to £40,522, against £31,707 in the previous year. After writing off about £2,000 less for depreciation, and providing a slightly larger sum for taxes, the net profit of 1914-15 was £23,918, against £13,204 in 1913-14. Out of the past year's profit a dividend of 5% on the capital of £400,000 is declared, against nil for the previous year, and the carry-forward is increased from £26,702 to £30,623. Only a small portion of the carry-forward is represented by cash, however, as the surplus liquid assets at June 30, 1915, amounted to only £23,809, of which £20,000 represents the sum required to pay the dividend. Of course, since the close of the year four months' profits have been earned.

* Ore reserves at February 28, 1911.
(*a*) Average assay value. (*b*) Average mill-head value.

The falling-off in the value of the ore reserves shown above is due to the fact that the upper levels are becoming exhausted, while the bottom levels, generally speaking, have opened up lower values. The future appears to depend greatly upon how the new West reef opens up in the main shaft section. So far this reef has given distinctly patchy values, but the area in which it has been explored has been of disturbed character. The ore reserves, amounting to 270,000 tons, represent about 2½ years' supply for the mill; but of the quantity only 163,740 tons, value 33*s.* 6*d.* per ton, is classed as proven ore, the remainder being split up into 76,660 tons partially developed, value 32*s.* per ton, and 28,300 tons in supporting pillars, value 35*s.* 6*d.* per ton.

The £1 shares at their present price of under 10*s.* are at a discount of 50%, but even so they are too speculative to be recommended.

LONDON, SATURDAY, NOVEMBER 20, 1915.

GREAT BRITAIN'S FINANCIAL POLICY.

We are now getting very close to the time when the nation will use its great strength to the fullest advantage, and when the almost superhuman efforts it is making will have the results they are designed to have. From the very outbreak of war the nation was determined to secure victory, whatever the cost might be in life or in treasure, and whatever has been done, whether wisely or unwisely, has been for the purpose of attaining this object. Hitherto, however, Great Britain has presented much the appearance of a lifeboat with a scratch crew. Every man in it has been anxious to do his best according to the light within him. But in consequence of the lack of experience, both of the boatswain and of the crew, the vast amount of energy expended has not carried the boat very far towards its goal. Only that part of the boat's crew which was fully prepared for the work in hand has expended its strength to advantage and has prevented the boat from upsetting. The progress which has so far been made by the British forces with the conduct of the War is mainly due to the Navy, which has swept the seas clear of enemy ships, and to bankers and investors who have provided all the funds needed to meet the country's colossal expenditure not only upon the Army and Navy, but also in loans to the Allies. A great deal of hard and valuable work, however, has been effected in mobilising a great Army, but, owing to the unexpected and unforeseen difficulties arising from the manufacture of equipment and munitions of war, that Army has not yet been able to use its great strength and to show its great power.

The task of mobilising the strength of the British Empire has created a great deal of discussion as to the relative importance of the various services which Great Britain can perform, but underlying these discussions is a unanimity that can leave no one in doubt as to the policy that will be pursued. The nation is determined to put out its entire strength, physical [illegible] sion between conscriptionists and anti-conscriptionists is merely one of method and of proportion. Both desire to provide the country with the most effective fighting machine that the country can produce. Sufficient time has now passed to permit the boatswain to get a grip of his crew and of their capacity; and he is now able to urge this one to greater effort, a second to restrain his strength, and a third to lengthen his stroke, so that the full strength and weight of the crew may be felt and the fastest time made. The boatswain is now aware of the strength of the Navy, and whether that strength is greater or less than is needed to dominate the enemy's fleet and to maintain command of the seas. The work accomplished by the Navy certainly indicates that its strength is fully equal to its duties; indeed, in the matter of the merchant ships commandeered for Navy purposes its strength seems to be greater than is required. By transferring the surplus back to the merchant service the country's earning power would be improved. The Army is now learning its work, and is making great efforts to prevent its inexperience from putting an undue strain upon the financial and economic resources of the country. Waste is being reduced, while the whole Army is being rapidly equipped and brought into a state of efficiency.

Now that everything has been done or is in course of being done to render both the Army and the Navy very powerful, attention is being concentrated upon marshalling and mobilising the country's financial and economic resources. In surveying this side of the problem, it is essential to recollect that the country wishes and intends to put out the whole of its financial strength in order to secure victory whatever that strength may consist of—income, credit, or accumulated wealth. It is also essential to recollect that not only should the country's full financial strength be exerted, but that it should be exerted in a manner that will give the best results. Well-expended financial strength will enable much greater fighting forces to be maintained, and much greater sums of money to be provided for our Allies, than otherwise will be possible. It is common knowledge that an efficient and well-trained housewife is able to make a given income go two or three times as far as an inexperienced and thriftless one. And it is obvious that if the financial resources of Great Britain are thoroughly well administered, we shall not only be able to maintain our great Navy at a strength that will enable it to command the seas, and further to supply our Allies with the financial resources they need to meet their foreign payments, but we shall be able to maintain a great army for an indefinite period. On the other hand, if our financial resources are frittered away, it is obvious that after maintaining the Navy and providing our Allies with the funds they need, the size of the army we can maintain will be a very limited one.

Thus the financial problem has a twofold aspect. First, it is necessary to provide from month to month for the conduct of the War the greatest sums of money that the nation can supply by every possible method; and the second aspect, of no less importance, is that the money shall be thoroughly well expended, and that for every sovereign paid out a sovereign's worth of goods or services shall be secured. It is these two aspects that are now being more fully appreciated. Hence we can now look forward with every confidence to vast sums of money being supplied for the War by the British nation, and for these sums to be expended judiciously and wisely.

The creation of the War Council recently appointed, [illegible] mittee under the chairmanship of the Chancellor of the Exchequer, should materially contribute not only to the work of mobilising the great financial resources of the country, but expending them in the most effective manner. Hitherto, the financial resources of the country have been imperfectly mobilised. The Government has, in fact, pursued the methods which

would have been applicable to a small expedition needing no special measures. It has imposed a certain amount of taxation, but a relatively small amount. It has issued loans for public subscription in the normal manner, and it has invited bankers to provide money by the purchase of Treasury bills. These methods are very much the same as were adopted with regard to munitions in the early stage of the War. It was naturally assumed that if contracts were placed production would expand, and that the amount of munitions produced would automatically increase. Experience in this matter has shown that normal methods are of little or no use in such times as these, and just as it was essential for the Government to organise war industries for the production of munitions, so it is now necessary for them to organise new methods for the provision of all the money required to meet our vast expenditures. The country was known to possess unlimited power to produce munitions, and everyone assumed that private traders would do what was essential to produce them. But they didn't.

In the matter of finance the position is exactly parallel. The country has a great income which is being spent by the owners in the usual manner without regard to the necessities of the situation. People ought to know and to realise the nature of those necessities, but they don't. It is, however, essential that this income should now be used for the conduct of the War, and not merely for the gratification of individuals. The well of income is a deep one, and all that needs to be done is to provide the means of making its contents available for the prosecution of the War.

Experience in the recruiting campaign has shown the great loyalty of all classes of the people. Not only is every family willing to provide men to fight for their country, but it is willing to do anything within its power to ensure success. Therefore, in the matter of finance all that needs to be done is for the Government to tell the nation what is required, and to provide the machinery for collecting the money.

The recruiting campaign shows that it is necessary to appeal to each individual family and to each person who can render assistance, and that when this is done there is rarely, or never, a refusal. And if the Government were to appeal individually to each family to provide all the money it could spare for war purposes, we have no doubt that the sum collected would reach a very great figure.

When it entered upon the War, the country possessed a great amount of fixed wealth that could not be used for war purposes apart from the income it produced. It also possessed a substantial amount of wealth in other countries which could be utilised by sales of securities abroad. And it possessed a substantial amount of floating capital abroad which it was able to call in. So far, the easiest and most natural course has been pursued. A considerable part of the war expenditure so far incurred has been provided by calling in our floating capital abroad. Steps have also been taken to realise capital abroad which can be got in by sales of securities. A banker's credit of £10,000,000 backed by collateral has now been arranged between London and New York, backed by the deposit of securities as collateral, and a further plan is being discussed for a very much larger credit backed by American collateral securities.

The work of realising the capital we have invested abroad would be much easier were it not for the British income tax imposed upon coupons and dividends payable in this country, whether held by a foreigner or by a British citizen. A small modification of the law exempting foreign and colonial securities from taxation when held by persons living abroad would greatly assist us in the work of realising the accumulated capital we have invested in other countries.

Beyond the capital we can thus realise the nation's credit can be used for the purpose of borrowing money abroad. £50,000,000 nominal has already been raised on the strength of Government credit in the United States, and it should be possible to raise large additional sums from time to time. Hitherto Colonial and foreign participations in British Government loans, apart from the special American issue referred to, have been prevented by the income tax. This impediment has now been removed, Mr. Montagu, the able Financial Secretary to the Treasury, on behalf of the Government, having this week introduced into Parliament an amendment of the law, as follows:—

"The Treasury may, if they think fit, during the continuance of the present War and a period of 12 months thereafter, issue any securities which they have power to issue for the purpose of raising any money or any loan with a condition that neither the capital nor the interest thereof shall be liable to any taxation, present or future, so long as it is shown in manner directed by the Treasury that the securities are in the beneficial ownership of persons who are neither domiciled nor ordinarily resident in the United Kingdom, and securities issued with such a condition shall be exempt accordingly."

This action should materially assist to induce foreign and Colonial subscriptions to future British Government loans. But, having regard to the not unnatural inclination on the part of investors everywhere, and especially in what hitherto have been the debtor countries, to invest in local securities, would it not be desirable to exclude all foreign securities from British income tax when held abroad? By means of the new amendment to the law the Government has considerably increased the power of this country to raise money abroad, but it will not in any way assist British investors to sell abroad their great holdings of nearly £4,000,000,000 of Colonial and foreign securities. Of this total only a small part becomes free of British income tax when exported, and it is impossible to sell abroad securities upon which British income tax is still charged after they are sold to foreigners. Having regard to the rise of nearly 40% in the prices of commodities that has already taken place since the War began, and to the great profits which many countries are making from these prices, it is obvious that the countries hitherto debtor countries are able to repurchase some of their securities from our investors. Of course, if British investors were to check the advance in prices by economies in expenditure and by preventing exports of gold, the profits realised by the neutral countries would be curtailed and their power to purchase would be restricted. But in that case we should not need to realise as many securities as we shall have to sell if our present rate of consumption is maintained and prices continue to advance. In any case, however, whether the British people become more economical or not, it would seem to be desirable to render our investments in foreign countries a liquid asset as far as possible by removing the British income tax from securities that pass from a British investor to a foreign or Colonial investor.

Another indication of the attention now being devoted to the work of mobilising the financial resources of the country and thus adjusting the financial situation was given by Mr. Bonar Law this week, when leading the House of Commons, in one of the weightiest speeches he has ever made.

Thus, in view of the attention the Government is paying to finance, we feel warranted in expecting that before long Great Britain will possess not only the most powerful Fleet ever brought together and a mighty Army, but will be able to finance its own great expenditures, as well as to provide large sums for the Allies, without in any way straining its credit or exhausting its financial resources. All that now needs to be done is to complete the work of mobilising the financial resources of the country and using them to the greatest possible advantage.

MEETING OF THE ALLIED MINISTERS.

Four of our principal Ministers—the Premier, Mr. Balfour, Sir Edward Grey, and Mr. Lloyd George—have visited Paris this week to consult with the French Ministry. We hope this indicates that not only will there be more continuous and more confidential communications in the future between this country and France, but that communications with the other Allies will become equally continuous and confidential. It is true, of course, that England and France have been acting much more closely together than any other two of the Allies. From the very first British troops were sent to resist the attempt to rush Paris, and ever since British troops have been co-operating with the French in the resistance to Austro-German aggression. Moreover, it is to be recollected that France has made greater efforts than any other of the Allies. It is unquestionable, of course, that the main intention of the German Government was to strike down France before she had time to prepare her defence, for the purpose of compelling her to become an instrument in the hands of Germany; and thus not only to trample upon French independence, but to make France a tool in the hands of her enemy for winning that world-wide dominion which the Kaiser so arrogantly covets. In consequence, France has called out the full strength of her manhood. On Tuesday Mr. Bonar Law told the House of Commons that France has at present an army of seven millions of men. The figures are so large as to be startling, and may appear grossly exaggerated to some readers. But if any one is so disposed to look upon them he should remember that France has a great Colonial empire, that she has been able to win the loyalty of her subjects beyond sea, and that, therefore, there is a very large contingent of French Colonials in her armies. Moreover, it is not to be left out of account that France has not confined herself to the defence of her own territory. She is acting with the greatest ardour with ourselves both in the Dardanelles and in Serbia; while she is prepared to act in other quarters if necessary. There seems, therefore, no reason to doubt that France now has called out her whole manhood, and that she is resolved to fight this War out to a successful issue. Nevertheless, it seems to us highly desirable that while the relations between this country and France are made as close and as friendly as it is possible to make them, yet the relations of both with the other Allies, and particularly with Italy and Russia, should also be made as cordial as they can be. Hitherto it is greatly to be feared that our affairs have not gone as well as they might have done because we have not kept up that close and intimate communication with all our Allies which leads to co-operation in every quarter, and, therefore, to the forces available being employed to the very best advantage.

Many readers have already jumped to the conclusion that some big *coup* is in contemplation. As the War Committee has been careful to keep silent on the matter we do not presume to give any opinion respecting it. But we have to bear in mind that winter has set in, that there has been both snow and rain in large quantities in the Western theatre of the War, and that, consequently, a great offensive movement would be undertaken just now under grave disadvantages. If, indeed, a strong frost were to set in, and to last for any time, it might be judicious to make an offensive movement. But if the roads continue so soft that they will be seriously cut up by the movement of great munitions, it looks inadvisable to choose this moment for any particular operation. We do not, however, in saying this mean to express any opinion of our own, or to urge the Government either to one course or to another. Both Governments have formed small War Committees consisting of the men supposed to be most competent to advise in regard to the operations that ought to be undertaken. We are quite content, therefore, to leave to the judgment of those two Committees, aided, of course, by their expert advisers, the measures that ought to be taken. But it seems to us that it would be rather precipitate to assume that a great movement, either in France or in Belgium, is under consideration when we look around and see how many grave problems are taxing the judgment of both Governments. In any event, it does not seem likely that a definite decision will be arrived at without consulting both Russia and Italy. It is to be presumed that as the attitude of both Greece and Roumania is still doubtful, and as, moreover, the British and French troops sent to the aid of Serbia are not sufficient for the intended purpose, there is very much to weigh well with regard to the Serbian defence alone

The Austro-Germans, aided by the Bulgarians, have at the moment a decided advantage in that locality both in numbers and in equipment. If we can judge from newspaper reports, it is not even yet decided what Greece will do supposing the Allied troops are compelled to retire from Serbia into Greek territory. Therefore, presumably, it is the Serbian question more than any nearer problem that is occupying the minds of the French and British Ministers at present. The expedition has been entered upon, and cannot, therefore, lightly be abandoned. In consequence, Ministers have to consider with all the care they can whether they ought to send out such a force as would be sufficient to safely encounter and victoriously conquer all opposition, or whether they are to limit the assistance they give until matters are more ripe for striking a decisive blow. We presume that even in this matter there must be close consultation with the Russian and the Italian Governments. Both must be very seriously interested in successfully protecting Serbia. Both, therefore, naturally desire to have a voice in the decision of whatever is done. And we may be sure that both are prepared to do whatever is at the moment possible for them to do. Russia more particularly must feel that she is called upon to protect Serbia to the very utmost of her power. She has been the guardian of the small Balkan States from the beginning, and her prestige would suffer if she failed to protect them now. On the other hand, the position of Russia is a difficult one. Notoriously, she has not up to now been adequately provided with munitions of war. Therefore she has had to evacuate Russian Poland, and her duty to her own subjects in Poland, as well as the desire to recover her prestige, must urge upon her that the first necessity is to drive the enemy out of Poland. Whether Russia can do that and at the same time render assistance to Serbia is a question which we need not enter into at this moment. We discuss elsewhere the military power of Russia, and we refer our readers to what is there said. Here it is enough to state that the four great Allies ought as a matter of duty to themselves and to those allied with them to consult upon every important question, and to act as far as is practicable in accordance with the common agreement. We may, however, permit ourselves to remark even here that the winter in Russia has set in with great severity; and that, therefore, the Germans are in a very serious dilemma. They cannot bear the climate as well as the natives can, and consequently, if operations were resumed, the Germans would be likely to suffer terribly. In addition to this, there are good grounds for believing that the German forces in Poland are small; that they have been drawn upon for the movement against Serbia as well as for strengthening the German troops in France; and that, consequently, they are at the present moment at a disadvantage compared with the Allies. If that be so, and we believe it is so, the Russians may find upon full examination of all the facts that they can not only keep employed all the enemy troops in Poland, but that they can likewise

give assistance to Serbia in her great difficulty. Whatever may be the ultimate conclusion, it is very plain that the Ministers who have visited Paris to consult with the new French Cabinet have a large number of exceedingly difficult and exceedingly complicated questions to discuss and determine.

MR. CHURCHILL'S SPEECH.

It is earnestly to be hoped that the public will learn from Mr. Churchill's speech the unwisdom of listening to ill-informed and spiteful charges made against Ministers. Mr. Churchill's speech has made a very great impression upon the public. Of course, as his detractors allege, it is an *ex parte* statement. Everything that a man says in his own defence must in the nature of the case be more or less *ex parte*. But the speech was an exceedingly manly one. There were no bitter charges against opponents. There was a frank assumption of all due responsibility, and nothing that ought to have been concealed was divulged. Therefore, the speech has made a powerful impression. And it is earnestly to be hoped that people will recollect that charges made against Ministers cannot at the moment be replied to; that, therefore, a bitter enemy may misrepresent almost with safety because in certain conditions it is impossible for the Minister to reply. The real duty of the public is to give its confidence to the men who have done their work well, to disregard all tittle-tattle from persons who cannot have accurate information, and to wait until full information can be brought forward for the final decision as to the merits or demerits of Ministers. Mr. Churchill was chosen by the Prime Minister for the express purpose of putting the Navy into such a state of preparation that if Germany attacked it would be able to maintain supremacy at sea. Luckily for us, it happened that just before the assassination of the Archduke Francis Ferdinand our Fleet had been mobilised, and before the time for demobilisation arrived the assassination of the Archduke, and the temper displayed by both Germany and Austria-Hungary, caused grave fears that peace might be disturbed. It is to the lasting honour of Mr. Churchill and Prince Louis of Battenburg that they agreed not to demobilise, and that, in consequence, this country has been able to establish such a complete supremacy at sea as never before was established. Recollect that the battle of Trafalgar was not fought till a dozen years after the outbreak of the Revolutionary War, and that until Trafalgar was fought we had not an unquestioned supremacy. If, then, nothing more stood to the credit of the late First Lord of the Admiralty and the First Sea Lord, Prince Louis, they have done a service in keeping the Fleet fully mobilised which never can be adequately rewarded.

Again, whatever may be the full story of the attempted relief of Antwerp, it is perfectly certain that the charges brought against Mr. Churchill are false. He did not originally suggest that either a military or a naval force should be sent to relieve Antwerp. When he did visit the city it was at the request of his colleagues. Moreover, the decisions he entered into were approved by his colleagues. Lastly, Mr. Churchill showed conclusively that he was not the sole author of the attack upon the Dardanelles. Of course, it is perfectly true that the whole story is not before the public. But Mr. Churchill came forward in the House of Commons and gave his own account of what actually happened with a manliness and a regard to the character of others which is highly commendable in him. There have been hints that the whole story has not been told, and there has been a lofty assertion that the public must judge. But nobody has come forward to lay his finger upon a single statement and say "This is false." We are not partisans of Mr. Churchill. We desire to claim for him no more than his merits. But we frankly confess that we have been very much impressed by the manly and straightforward manner in which he made his statement. Above all, we dwell upon the facts in the hope that the public will take to heart this lesson: that a public servant may by innuendo, false representations, and bitter hostility be hunted down, and yet when he challenges an open charge everybody shrinks from meeting him. Let us, then, in future trust the men to whom we have committed great powers. Without public support they cannot do anything effectual. With public support they can give their whole hearts and their whole minds to their duty. Let us remember how very grave and serious a thing that duty is, and try to be just to public servants as we try to be just to our friends.

RUSSIA'S FIGHTING POWER.

On Thursday of last week Mr. Tennant, replying to a question put to him as Under-Secretary for War, stated that just before hostilities broke out the number of men of fighting age and capacity in Russia was estimated at 21,400,000. As pointed out elsewhere, Mr. Bonar Law on Tuesday told the House of Commons that France has actually under arms at present seven millions of men. The population of Germany is considerably larger than that of France. Let us, then, assume that the whole fighting male population of Germany amounted at the beginning of the War to ten millions, which we believe to be entirely above the mark. But let us assume that it was, and that the fighting force of Austria-Hungary was eight millions. Then, while Russia had at the beginning of hostilities a male population capable of bearing arms to draw upon amounting in round figures to 21½ millions, Germany and Austria-Hungary put together had only 18 millions, or if anybody chooses to add two millions more, let us say 20 millions, though we believe 20 millions to be a gross exaggeration. Still, when hostilities broke out, on those figures Russia alone had a majority of possible soldiers over the two Central European Empires of a million and a half of men. The facts are really more favourable to Russia than we have put them, because we do not desire to say anything that would seem to exaggerate the power of Russia and minimise the power of Germany. The Russian population is growing more rapidly than the population of any other part of Europe, and Russia has unsettled lands of such vast extent that her population can go on growing for many a year. On the other hand, it is true that Germany has made wonderful economic progress during the last 50 or 60 years. Yet in spite of that great progress there is a considerable emigration from Germany, while from Austria-Hungary the emigration is still vaster. The populations, therefore, of the two Central European Empires are not growing with anything like the speed of that of Russia, and even if we assume that there is no breaking up of the two Central European Empires, the superiority of Russia will steadily increase for many a year to come.

Some of our readers may doubt the statement that France actually has under arms at present seven millions of men. If any reader does so he should remember how vast is the colonial empire of France, and how France draws upon that Empire when war breaks out. Furthermore, it must never be forgotten that while the British have in France, according to a statement of Mr. Asquith's the other day, over a million of men, they occupy only a very short front, whereas France occupies an immensely long front, and all through the summer has been on the offensive, constantly bombarding the enemy, and steadily, though very slowly, gaining from the enemy. We have, then, under 20 millions of fighting men on the part of the two Central European Empires, whereas we have nearly 21½ millions in Russia alone; we have actually under arms in France seven millions; and we have of British troops of all kinds probably four millions. Or to put the matter shortly, Russia,

the British Empire, and France have 32½ millions of men to draw upon against under 20 millions on the part of the two Central European Empires. It is admitted that France has called out every man she can well dispose of, and therefore that she cannot hope to increase her seven millions. But Germany also has called out every man she can spare. Remember that Germany has been preparing for this War for half a century or more, that she depends not really on the fighting qualities of her men, but upon asphyxiating gas, inordinately great cannons, and the like. Therefore, it is as important for Germany to keep a large body of her fighting men at home working in the mines and factories as it is to keep a large actual fighting Army. Germany by her sudden rush upon Paris got possession of a very considerable portion of France, and practically of the whole of Belgium. Therefore, she has been able to draw upon her own male population to an immensely greater extent than she otherwise could, because she has compelled Belgians and Frenchmen to work for her. But now the War has lasted nearly sixteen months. We ourselves have made good the want of high explosives. And Great Britain, Japan, and the United States are supplying Russia with what she needs.

As the winter has set in it does not seem probable that there will be very great activity for some months in Russia. Therefore, Russia has several months before her in which to provide all the munitions she requires, and she has an almost untouched male population to draw upon. For she was not able to draw upon the 21½ millions at her disposal to any considerable extent because she could neither feed them nor arm them. Now she is being rapidly supplied, and the same thing is true of ourselves. When the War broke out we had only six divisions of infantry and two of cavalry which it was possible to send to protect either Belgium or France. Now we have probably four millions of men. All the self-governing portions of the empire are hurrying forward further assistance to us. At home a new energy is being put into recruiting. When, in a few months, spring comes, therefore, the superiority of the *Entente* Allies over the Central European Empires will be so great that it will be humanly impossible for the latter very long to resist. Serbia is making a much better fight against great odds than could have been expected. Russia, if she draws upon her reserves, as she ought to do, will be in a position not only to attack Constantinople and relieve Serbia but to resume the offensive against the two Central European Empires. And France, with her seven millions of men, will be vigorously and gallantly performing the magnificent service she has performed during the past sixteen months. We have said very little regarding Italy so far. But it is to be recollected that Italy has a population of about 34 millions; that she is threatening Austria-Hungary; and that at any moment she may be in a position to take a step which will paralyse the Dual Monarchy. It is never to be forgotten that the majority of the subjects of the Emperor Francis Joseph are Slavs and are disaffected. They have been kept down because of the strict military supervision under which they are held. But it is notorious that they are longing for the appearance of deliverers amongst them, and that one single serious defeat of the Dual Monarchy would unquestionably bring about a general uprising. There is no question that Germany, because of the care with which she prepared for War for so many years, and the brutality with which she broke her treaties, flew in the face of every provision of international law, and descended to the most criminal actions, has been able to win in the beginning to a much greater extent than even the best informed expected. But she has now under arms the very utmost number that she can call together. She will be going down, therefore, in the future, whereas her enemies will be growing more and more powerful and better and better prepared. That we are not exaggerating we may remind our readers that it is generally believed that Germany at present has only 170 divisions everywhere in conflict with her enemies, and that she retains 90 of these in France and Belgium, showing that more than half of the whole German Army is even now fully occupied by the French and the British.

THE AUSTRALIAN WHEAT QUESTION.

Rumour has been busy of late with the question of the Australian wheat crop. It has been affirmed that the Commonwealth Government had not only decided to commandeer the entire surplus of the crop to be reaped in December and early January, but had set about securing the necessary tonnage for that shipment. The programme is said to be that growers will receive 3s. per bushel (5s. 7d. per cwt.) on account, and "the rest as agreed" after wheat has been sold at British port of arrival. Two leading firms are mentioned as having undertaken the whole of the wheat shipments between them, and in exchange for their doing this no wheat or flour will be allowed to leave Australian ports except in vessels chartered by them. Committees formed in Australia and London will attend to the purchase and sale respectively. The Government of the United Kingdom has been taking ships at the rate of 11s. per ton per month. Australia is rumoured to prefer a fee of 95s. per ton from Sydney to London direct; but this is a remarkably high price even for the present period of extraordinary stringency in the supply of shipping. The reader will perhaps do well to regard nothing as absolutely settled before the very close of the present year. We know how the Home Government has modified its decisions, and the Australian may also change its decrees.

Meanwhile let us see what actual wheat yield Australia's colonies—Queensland, South Australia, New South Wales, Victoria, Tasmania, and West Australia—probably have for home supply and export. In 10 years the yield has varied from 13½ million cwt. to 51¼ million cwt. and the area cultivated from 5½ to 9½ million acres. The yields seem pretty closely estimated by the statisticians, but the acreage is rather indeterminate, as considerable areas are apt to prove not worth reaping in indifferent seasons. The yield per acre is never large, according to our standard, even in a good year, and Australia is a country of very dear labour. The estimates for the last 10 years may be given as follows:—

Australian Wheat Yields.

Jan.	Cwt.	Acres	Jan.	Cwt.	Acres
1915	13,560,000	8,600,000	1910	49,250,000	6,650,000
1914	56,492,000	9,500,000	1909	34,000,000	5,500,000
1913	50,670,000	7,500,000	1908	24,300,000	5,700,000
1912	38,900,000	7,550,000	1907	36,150,000	6,000,000
1911	51,750,000	7,450,000	1906	37,350,000	6,100,000

These figures are based on Board of Agriculture estimates and on those of the London and Liverpool shipping lists, checked by private advices and the circulars of leading firms. The last decennial Grey Book, published by the Australian States in 1905, gave the yield of January 1905 at 29,100,000 cwt. on 6,270,000 acres. The above figures show that while Australian production varies greatly, 700 lb. per acre is about the highest return that can be looked for even in a very good year. If this yield per acre be assigned to the crop to be secured in January 1916, the area being put at 2,000,000 increase, or 10,600,000 acres, then the prospective yield will be 66,250,000 cwt. In 1915 requirements have been about 2,000,000 cwt. above the yield; the surplus of 1914 has been completely eaten up. We may, therefore, with some confidence put consumption at 15,560,000 cwt. This being deducted from the crop will leave 50,690,000

available for exportation or about 11,827,600 Government quarters.

Past exports have been as follows, the total to Europe, including the United Kingdom, and those for South Africa and China, being very rough, but fairly indicative of the growing trade. South Africa includes Madagascar and Réunion, French colonies which buy rather freely; it also includes Portuguese East Africa:—

	To Europe Cwt.	To Africa Cwt.	To Asia Cwt.	Total Cwt.
1914 ..	28,676,000	2,000,000	1,000,000	31,676,000
1913 ..	21,243,200	1,900,000	900,000	24,043,000
1912 ..	22,100,000	1,800,000	800,000	24,700,000
1911 ..	33,366,000	1,700,000	700,000	25,766,000
1910 ..	27,600,000	1,600,000	600,000	29,800,000

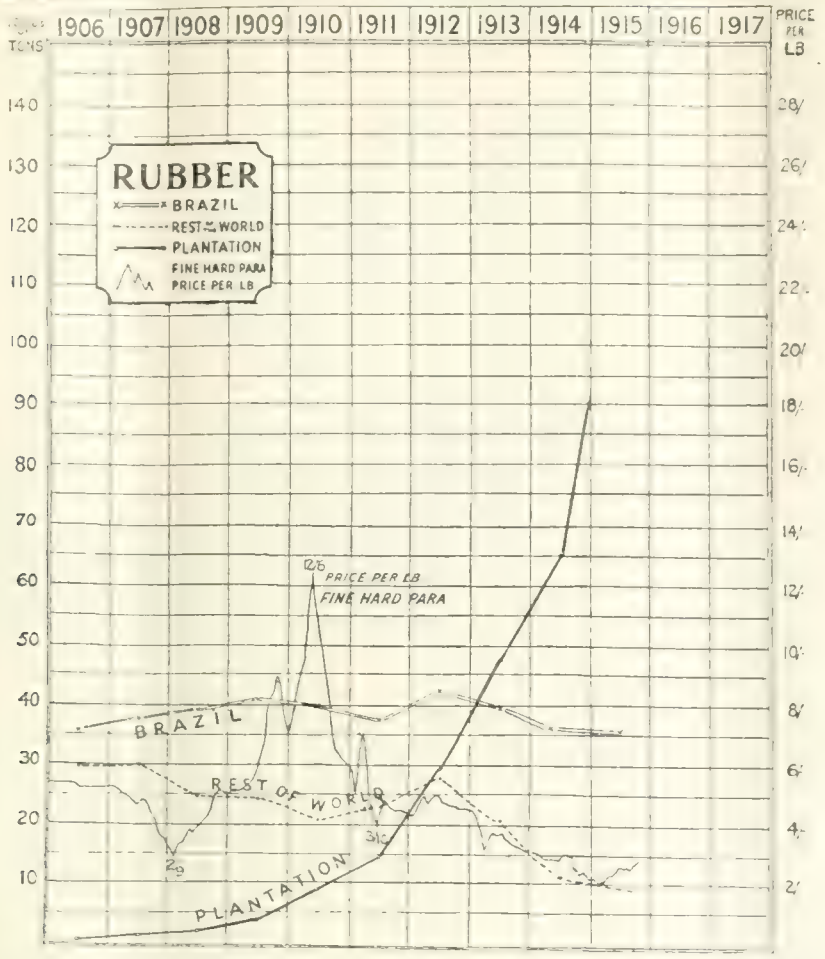
There were no exports in the last four months of 1914, and since January 1 all exportation has been prohibited. A little Indian wheat was imported in the summer months. To move the 1916 wheat surplus Australia will need 14,724,000 cwt. more tonnage than she has ever before required; but she can if she chooses cut off from Africa and Asia the 3,000,000 cwt. which they are willing to buy, and send all her spare grain to the United Kingdom. The case of South Africa includes British possessions which, unhappily, have not risen to the agricultural occasion, but Argentina and India could fully meet their needs if the convenience of the shipping trade pointed to dealing with shipping from Australia in an undivided block. China and Cochin China can buy of the American Pacific States, but it is not altogether desirable to invite a neutral to annex a growing business of our own.

The somewhat curious matter about the idea of placing 50,000,000 cwt. of Australian wheat on British port markets in 1916 is the assumption, apparently not only by Mr. Hughes, the Australian Premier, but also by Mr. Bonar Law (Colonies), Mr. Runciman (Trade), and Lord Selborne (Agriculture) at home that the British public will buy it on arrival. Hitherto Europe, including the United Kingdom, has not assimilated more than 33,366,000 cwt. in a single year, and as the first completed year of war was got through without any excess of demand over supply, the presumption is that war difficulties have been overcome and the question of wants and arrivals established without recourse to heroic measures. The commandeering of the Indian crop surplus was not so much a Government venture on the seas of trade as a statesmanlike understanding of a vast native population, whose instinct in time of war or other trouble is to hoard.

Australia, it must be remembered, produces several sorts of wheat for the agency shop-window, but practically only one sort for export. That is fine, light-yellow wheat, mild and palatable, but lacking in strength, and requiring to be mixed with a good percentage of wheat rich in dry gluten. Australian wheat mixes excellently with Canadian; but has the Australian Government consulted that of the Dominion with respect to the quantities that the two shippers are going to put coincidently on the British port markets?

The Canadian wheat is not a tied trade; it is not offered on arrival at a fixed price. If the Australian is to be obtainable at a fixed value, it is clear that when Canadian wheat is cheap Australian will tend to remain unsold in port granary. If it is not landed, the loss of freight earnings by the ship it is on board comes to very much the same thing. There are the Argentine and American surpluses to consider also, and interference with an open trade to the extent of 50,000,000 cwt. may set up dangerous waves of speculation. One real asset, however, is that Australian wheat, of all imported sorts, most nearly resembles English, and that a good supply of it in the period May 1 to July 31, when English is always very scarce, is a boon to millers, enabling them to supply bakers with the right mixtures for the modern town taste in the loaf.

THE RISE IN RUBBER.



YEAR by year, up to early in 1915, for nearly five years the price of rubber fell, and except for a short period of recovery early in 1911 the fall was throughout persistent until the beginning of this year. Prices in April 1910 went to an inflated level, "plantation" touching 12*s.* 10*d.* and wild-grown Para 12*s.* 6*d.* per lb. The fall brought down quotations by January 1915 to 2*s.* and 2*s.* 4*d.* per lb. Present prices show a recovery to 3*s.* and 2*s.* 9*d.* respectively and the feature of "plantation" rubber at a higher price than wild Para.

The rapidity of the growth of production of plantation rubber, it had been feared, would result in an enormous excess of supply over demand. This apprehension contributed to the depressed condition of the market, but the reduction of price stimulated consumption, enabling rubber to be used in many directions where a high price would have been prohibitive.

At the time the War broke out the quotation was steadily kept at between 2*s.* and 2*s.* 6*d.* per lb. for standard-quality plantation, which was slightly less than the range in the twelve months previously. On the outbreak of war the decline in the use of rubber in some trades and the cut-off of the supplies required by the Central Powers was counterbalanced by an increased demand brought about by the army and navy requirements of the Entente and neutral Powers and the big expansion in the world-wide use of motor vehicles.

The recovery in price lately has led to much discussion of the position and probabilities of the future. Also it is asked what has been the impulse that has moved the market to the extent of a total recovery of 50% since January last. Apparently the chief buying has been for American account. Our transatlantic friends are understood to have been to the fore not only in acquiring rubber for prompt delivery, but in buying for forward positions, with delivery arranged to as far as the end of 1916. In the produce market it is asserted their purchases of late have exceeded 60% of the total business done. If the main business has been for this quarter, the question arises: why are the purchases made? It is known there are big foreign orders placed in the United States for rubber goods, also an increasing growth in the home demand, and insufficiency of stocks. There are also, doubtless, other reasons, including possibly the desire to acquire control of the rubber market in like manner as a few years ago American operators temporarily effected. Some American market operators love big coups in articles such as wheat, lard, cotton, copper, &c. They made a big coup in rubber years ago, and at the moment they may consider there is little risk of a set-back, but the possibility of an appreciable further rise in prices. Both from their point of view and in general it is felt that while there is war the demand will continue to be heavy. If an early peace occurs there will, for a period, be a large demand for rubber for the rehabilitation of army and navy requirements and also generally. The Central Powers especially would require immense quantities both for Governmental and commercial requirements. Any appreciable control of supplies and an accumulation of stocks for a period by the Americans would enable a combine to exact its own price.

If a design of such character be entertained, it is worth glancing at the magnitude of the value of the rubber output. At current prices the estimated rubber production of the world in 1915 and in 1916 would represent equal as to 1915 to about 40% and as to 1916 over 50% of the value of the world's gold output of, say, £92,000,000 a year. The production of rubber is estimated as set out below, and an average

price of 2*s.* 8*d.* represents approximately £300 per ton of rubber:—

Estimated Rubber Output.

	1915 Tons	1916 Tons
British grown	90,000	125,000
Foreign grown	35,000	40,000
	125,000	165,000
Value at £300 per ton	£37,500,000	£49,500,000

The influence on American exchange of any such action as that which possibly may be contemplated would be important in view of the very large contribution of the world's rubber production by British growers.

The above reference to output gives interest to the changes that have occurred in recent years, and we give below a contrast of the rubber production of each year since 1900. Not until 1907, however, did the output of plantation rubber attain to 1,000 tons. In the table we show the growth of production of plantation rubber and the movement in the output of wild rubber, and would particularly note that Brazil's output, which was over 42,000 tons in 1912, subsequently decreased, and as prices receded production fell off so severely that the yield for 1915 is estimated at only 35,000 tons. An even more severe movement has occurred in other wild-rubber producing countries. The low level of prices made it unprofitable in many directions to produce, and so severe was the decline that an output which in 1907 was returned at 30,000 tons is estimated for 1915 at about only 9,000 tons.

The figures to 1914 we give are taken from the particulars compiled by Messrs. W. H. Rickinson and Son from official data:—

Year	Plantation Tons	Wild — Brazil Tons	Wild — Rest Tons	Total Tons
1900	4	26,750	27,136	53,890
1901	5	30,300	24,545	54,850
1902	8	28,700	23,632	52,340
1903	21	31,100	24,829	55,950
1904	13	30,000	32,077	62,120
1905	145	35,000	27,000	62,145
1906	510	36,000	29,700	66,210
1907	1,000	38,000	30,000	69,000
1908	1,800	39,000	24,600	65,400
1909	3,600	42,000	24,000	69,600
1910	8,200	40,800	21,500	70,500
1911	14,419	37,730	23,000	75,149
1912	28,518	42,410	28,000	98,928
1913	47,618	39,570	21,452	108,140
1914	70,700	37,000	12,000	119,770
1915 (est.) ...	90,000	35,000	9,000	134,000
1916 (est.) ...	125,000	[illegible]	[illegible]	165,000

But a generation ago British-grown teas, India and Ceylon, displaced the China teas previously relied upon. Similarly the ability of British growers to produce plantation rubber profitably at about 2*s.* per pound has brought about a large displacement of wild rubber. The total wild-rubber output of 1912 was estimated at 70,000 tons; for 1915 the estimate is but 44,000 tons.

Apart altogether from the possibilities in connec[illegible] evidence of extension of the use of rubber in all manner of directions, any appreciable easing off in prices is for some time ahead unlikely to be witnessed. On the other hand, it is quite probable that further appreciation in prices will be witnessed, though it is to be trusted that no wild rush such as that which brought about the high rise in 1910 will recur. The record of price movements—spot quotations—of plantation and wild rubber, highest and lowest of each year and averages, are given below:—

Year	—Best Crepe Plantation— Highest		Lowest		Average		—Fine Hard Para— Highest		Lowest		Average

RUBBER SHARE INVESTMENTS.

The [illegible] altogether as a surprise to those who have studied the position of the industry closely and followed the trend of events. The majority of the older companies have been steadily earning large profits and paying high dividends, while very many of the young producers have been rapidly expanding their outputs, increasing their incomes, and commencing or augmenting their dividend distributions. Estate management has been brought to a high pitch of perfection, costs of production have been heavily reduced, new and improved methods of tapping and cultivation have been adopted, and very few adverse "incidents" of any kind have

occurred such as so often upset the equilibrium of other speculative markets. Thus rubber shares have come to be looked upon as partaking more of the nature of an industrial enterprise than a speculative venture, but this notwithstanding, the purchaser is able to calculate upon receiving a high yield on his money on the basis of a comparatively low price for the commodity. Moreover, through the War three great doubts which perturbed the minds of rubber investors in the years of reason following the boom of 1910 have been disposed of. Plantation rubber was not held in very high esteem by many manufacturers

owing to their idea that it was inferior to "para." But what kind of rubber, even plantation, has met the immense demands of the War for motor tyres, waterproofs, &c.? Then again, it was thought in pre-war days that the immense increase of plantation production that must—and, indeed, has—followed the great boom plantings would so outstrip consumption as to bring about an unremunerative level of price for the commodity. But the War has put a totally different complexion on this subject, the uses for rubber have been greatly widened, and after the War the replenishment needs of the Central Powers will be great. Lastly, the bogey of synthetic rubber must have ceased to worry even the most timid shareholders. "Necessity is the mother of invention," and yet Germany, despite her great need and her world-famous chemists, has not discovered a synthetic substitute. In view of all these circumstances it is but natural that rubber shares should come to be looked upon with increasing favour. They are not a speculation in the sense that a mine or an oil company is a speculation, and yet they can be bought at prices that afford a high yield to the investor and give promise of considerable capital appreciation irrespective of a rise in the value of the product.

But it is essential that the investor should take care to pay a reasonable price for his purchase, and in respect of no other kind of security with the same attractions is it so easy to ascertain the real value of the shares as compared with the market price. The great thing to remember is that an estate cannot produce more than a certain amount of rubber yearly from each planted acre. In the early stages the yield varies according to the age of the trees, and always the situation of the estate plays an important rôle; but, roughly speaking, it may be taken in regard to Malaya and Sumatra that 400 lb. per planted acre, at full maturity, is a safe allowance, or, if conservatism is desired to provide for possible contingencies, 350 lb per acre. Three other important factors are the price of rubber, the cost of production, and the market value of the capital. At full maturity, when producing from 350 lb. to 400 lb. per acre, well-situated estates should be able to produce rubber at a total cost of 1s. per lb.—a number of the older large plantations have already reduced their costs to appreciably under 1s. Now, on the basis of a given price of rubber and 1s. per lb. "all in" costs, it is very easy to arrive at what must be the maximum market capitalisation per planted acre of a fully matured estate producing from 350 to 400 lb. per acre, assuming that the purchaser requires a yield of 10%, on his investment. In the following table we show what the maximum market capitalisation per planted acre must be with a varying price for rubber:—

Assuming Investor Requires 10% *Yield.*

Price of Rubber Per Lb.	Full Maturity Yield 350 lbs. per Acre. Assumed "All In" Cost Per Lb.	Maximum Market Capitalisation Per Planted Acre	Full Maturity Yield 400 lbs. per Acre. Assumed "All In" Cost Per Lb.	Maximum Market Capitalisation Per Planted Acre

Present Price of Rubber 3s. 0d. per lb.

Note.—The above table shows the maximum market capitalisations per planted acre because it is assumed that the whole of the profit represented by the difference between cost and price of rubber is distributed in dividends, and affords the investor a [illegible]

If shareholders and others interested will bear in mind the figures of maximum market capitalisations per planted acre given above, they will be able very easily to gauge the relative cheapness or dearness of the various rubber shares. In the full-page table herewith we give the vital information necessary to the appraising of about 80 different shares. We have set the three most important columns in conspicuous type. The reader, casting his eyes from left to right, will see what portion of the planted area has reached, or is about to reach, the tapping stage, what portion has still to come into production, and the total planted area. He will then observe the market capitalisation per planted acre, which he much consider in relation to the rubber production, the output per planted acre, and the "all in" costs shown in the succeeding columns. Also, he will note the profit earned in the last financial year and the dividends paid, indicating the margin between the distribution to shareholders and the profit earned. We venture to think a study of this table will open the eyes of many rubber shareholders to the value of their investments in comparison with others offering at present market prices, and will give a good idea of the number of shares that offer distinct attractions to the investor willing to take a comparatively low yield on his money now, with the almost certain prospect of a higher return later on, and the natural corollary of appreciation in capital value.

BUENOS AYRES AND PACIFIC RY.

Not the least interesting item in Lord St. Davids' speech at the meeting of the Buenos Ayres and Pacific Railway Company this week was the reference he made to future capital commitments of the Company. In recent years we have been accustomed to see the Buenos Ayres and Pacific spending capital at the rate of a million and a half to two millions a year upon its own and subsidiary undertakings; now we have the assurance of the Chairman that for the next two or three years, at any rate, efforts will be made to keep capital expenditures within £200,000 per annum. At June 30 last the capital account showed a credit balance of £2,139,000, so that for some time to come stockholders are not likely to be called upon to sanction further new issues. The Company may well for a time rest on its laurels seeing that it has done so much in the past to extend and consolidate its system—a policy which, with the return of better times, is likely to bear abundant fruit in the shape of largely increased earnings and profits. Dealing with the immediate outlook, Lord St. Davids stated that a good feature was the fact that the area under wheat was greater than last year. On the other hand, some damage had been done by drought, while they were suffering from the visitation of locusts, which had also caused some little damage. While locusts do enormous damage to maize, however, it is not usual for them to do so much to wheat, and Lord St. Davids does not apprehend, therefore, that it will be very great. Another bad feature, he stated, was [illegible] was bound to go up. He estimated that coal would cost the Company at least £100,000 more, and possibly £150,000 more, this year than last. On the other hand, traffic receipts continue to grow, the increase to date being as much as £310,000. Generally speaking, the position of the Company depends on the condition of the country, and in this respect signs are not wanting that an improvement has set in. The country has been importing very little [illegible] prices. The result is that in Argentina deposits in [illegible] or later this money will be used in the development [illegible] the old rate of progress will be resumed. The price [illegible]

Financial Notes.

THE *Official Gazette* on Wednesday published the text of the Bill authorising the new French Loan, together with the decrees and regulations fixing the conditions of the issue. The price of issue is to be 88 francs per 100. The rate of interest is to be 5%. The subscription will be opened on November 25, and the date of the closing of the lists will be not later than December 15. Subscriptions may be paid with National Defence vouchers and bonds of previous War Loans, with 3½% Rentes and, on certain conditions, with 3% Rentes, and savings banks deposit receipts. The loan will bear interest from November 16. The price of the 3% Perpetual Rentes, which may be given in payment to the extent of one-third of the maximum subscriptions to the Loan, will be reckoned at 22 francs for each franc of interest.

It is a serious disadvantage, of course, that the enemy is in occupation of so large a portion of French soil, some of it the most prosperous in the Republic. We do not doubt, however, that the Loan will be a great success, for, though residents within the occupied territories will not be permitted to subscribe, the patriotism of the French people outside will not fail. Means will be found to make a great demonstration on the occasion. The amount of the Loan, very wisely, is not fixed, for, so much of the country being in the occupation of the enemy, it is difficult for even the most experienced financier to form an estimate of what the country can actually pay up. In any event the credit of France will not suffer, for everybody knows how keen is the patriotism of the French people, and how certain it is that the occupied Departments would subscribe largely if they had the power of doing so.

It is reported from Washington that several amendments to the Federal Reserve Act are under consideration for submission to Congress at the coming Session. The provision to vest in the Federal Reserve Board instead of the Secretary of the Treasury, the control of Government funds so far as their deposit in Reserve Banks or other banks is concerned, is one of the amendments that is expected. It is further anticipated that a provision will be introduced reducing the liabilities of member banks for payment on capital stock in the Reserve banks, possibly leaving the control of at least one-third of the reserve funds subject to final payment by the banks to the member banks themselves, as was the case under the old currency system. One other amendment looked for is a change in the law which would permit the handling by the Federal Reserve Banks of acceptances based upon domestic and commercial transactions [illegible] bills of exchange may now be taken.

[illegible] markets this year surprise had not seldom been expressed at the slowness with which the recovery of American trade and American speculation had proceeded. Those who were so surprised forgot many of the conditions which weighed on markets. The country had not recovered from the breakdown of 1907, and although the new Banking Act contributed to a restoration of confidence, it did so only slowly, for many people doubted whether the Act was altogether wise, and many more felt convinced that an amendment of the Act would have to be undertaken even before the Administration which carried it through came to an end. There is no question, however, now that American trade is making very great progress, and that the European war has benefited American business as largely as the most sanguine anticipated.

Of course, there are still obstacles in the way of further rapid advance. For one thing, the position in Mexico is anything but satisfactory. Carranza has been recognised by the South American States, and even by the United States. But feeling in the United States is anything but very confident respecting the policy he will pursue or his success in restoring and maintaining order. Then there is the great European War, which, if it benefits the trade of the United States, disturbs the trade of so much more of the world, while there are always difficulties arising which may have consequences that nobody can foresee. It is doubtful, therefore, whether there will be that outburst of speculation that many have predicted, though it is certain that trade must expand owing to the extraordinary demands of the European belligerents for goods from the United States.

The general feeling in Argentina is that the crops this year will be good, though not so good as last year. Rain fell at a propitious time, and that ought to be a good omen. On the other hand, there is talk of locusts, and there is always danger of frosts and other climatic disadvantages. However, there is no serious doubt that the crops will be good. Meantime, Argentina is benefiting by the large purchases of the belligerents and, therefore, everything is in favour of the country.

In Chili, the prospects are favourable, although it is true that the price of nitrate has fallen to 8*s.* 6*d.*, having been as high as 9*s.* But, against this, it is to be noted that freights are more favourable, while prices for forward delivery are good.

Business is not yet as good in India as the excellent monsoon led many people to hope, but it is to be recollected that India is doing a large trade all the same in jute, the War creating a strong demand for it. Likewise, there is a good business being done in cotton, chiefly for Japan.

LOUISVILLE AND NASHVILLE RR.

IMPROVING POSITION.

THE Louisville and Nashville of late years has come to be regarded as one of the strongest railroads of the United States. That there is every justification for placing the undertaking in this category is evident from the fact that in the past year, in which there occurred the greatest percentage falling off in its revenue since 1894, the profits earned were equal to about 6¾% on its stock. It is true that in view of the adverse circumstances existing last year, and the desire to husband the Company's cash resources as far as possible, the rate of dividend was reduced from 7%, which had been forthcoming for the preceding five years, to 5%; but the improvement in conditions this year is likely to be so considerable that no long time is expected to elapse before the distribution will be raised to a higher level. Indeed, the existing quotation of about 126 for the stock in New York, at which the yield from the 5% dividend is no more than about 4%, would seem to indicate that the market recognises that the set-back in the dividend is merely a temporary matter and discounts in large measure a recovery in the rate of distribution.

The Company's lines serve not only a great agricultural and cotton-growing area, but important coalfields and manufacturing districts, the main line passing through the important iron centre of Birmingham, Alabama. Further, the lines form one of the most direct routes between the manufacturing districts of the Central West and the South and the Gulf of Mexico, extending, as they do, from Ohio and Indiana, as well as from Chicago and St. Louis, through Kentucky, Tennessee and Alabama to the sea coast. By reason of the geographical position of the system between the South and the Gulf, and between the South-East and the North-West, great prosperity has been brought to the Louisville in the past, and as time goes on and the territory served becomes more highly developed this prosperity will be considerably enhanced. Moreover, now that a bold bid is being made by the United States to build up a big trade with Central and South American countries, new sources of traffic of a profitable character may be expected to be opened up for the Louisville.

The depression in the iron and steel industries and in building construction caused traffic and earnings to fall off somewhat in the June half of 1914, and the set-back that then occurred was intensified by the disturbance to economic conditions in the South resulting from the outbreak of war. In no small degree the prosperity of the Louisville in recent years has been derived from the good times that have been enjoyed by the agricultural community, and especially by cotton growers, from the relatively high prices that ruled for agricultural produce of all kinds. Although not a large carrier of cotton itself—the tonnage of the staple in a normal year representing only about .6% of the total freight carried—the Louisville, in common with other lines operating in the same region, was bound to suffer from the blow to business activities in the South that ensued last year in consequence of the unprofitable prices obtained for cotton and the greatly reduced spending power of the communities served. Furthermore, the relative absence of orders for equipment and materials and supplies of all kinds on behalf of the railroads of the country, in view of the desire of the companies not to commit themselves to large expenditures until the question of freight rates had been satisfactorily settled, and the outlook for improving earnings was more assured, was also a disturbing factor that had to be contended with. In the ordinary course of things nearly 40% of the freight tonnage of the line consists of bituminous coal carried from the mines situated upon its system to the great industrial centres.

To afford an illustration of the great shrinkage in business throughout the whole territory served, some interesting figures are given in the last annual report, which we published a few weeks ago. These statistics show the falling-off in the past year in the freight "forwarded" revenue from the principal stations, from which it appears that from St. Louis the decline was as much as 30%, from Birmingham, Evansville, and Selma 25%, and from Cincinnati and Louisville almost 24%. In the case of the remaining stations, the percentage declines ranged from 10% to about 22%. Normally nearly 90% of the Louisville's freight traffic originates on its lines, so that the following statement, not only indicates the magnitude of the loss of traffic last year, but affords a good idea of the extent of the depression in trade in the districts served. Thanks to the satisfactory grain crops of 1914, the lightest falling-off was in products of agriculture, which declined 6.6%. In animal products the shrinkage was 14%, in minerals 12½%, in forestal products 20¼%, and in manufactures, merchandise, and miscellaneous freight, the volume of which rises or falls accordingly as the purchasing power of the community served expands or contracts, the decline was over 18%.

The changed conditions of traffic last year, and the greater proportionate decline in the tonnage of high-class freight, were responsible for the considerable decline in the average freight rate to .719 cent, in comparison with .778 cent secured in the previous year. Our records of this Company go back to 1890, and in no year since then has the rate been as low as last year.

It is little wonder in these circumstances that the gross revenue for the past year declined $8,263,000, or almost 14%, to $51,740,000, which is the lowest figure since 1909. A considerable portion of this loss of revenue was, however, neutralised by smaller operating expenses and taxes, the reduction having been $6,006,000, or about 12.6%. Hence the falling-off in net earnings after taxes was $2,257,000, or about 18%. The additional miscellaneous income received more than offset a small increase in interest

• In addition a dividend of 1 per cent. on L. & N. RR. stock was paid, February 1915, in stock of Louisville Property Co.

and other charges, and the final result was a reduction of $1,967,000 in the net profit, which amounted to $4,882,000, a sum equal to 6.78% upon the stock. The profit earned in the previous year was equal to 9.51%, and in 1912-13, 12.79%. For 1910, when gross receipts were only $1,000,000 higher than for the past year, the net profit amounted to $10,413,000. Practically the whole of the shrinkage in profits that has occurred in the interval has arisen from increased expenses, due partly to much more liberal outlays upon maintenance, and in large measure to the additional cost of operating brought about by higher wages and various causes over which the Company has had no control.

From the appended Income Statement, showing the course of earnings and profits over the past decade, it will be noted that after the payment of dividends the Company has had large sums available each year for capital purposes. We would add that the same remark applies to preceding years also, the only exception since 1890 being in 1894, when there was a deficit of but $26,000, after paying a 4½% dividend. Indeed, for a long period the policy of the undertaking appears to have been to distribute half the profits in dividends and to put the remaining half back into the property. To take the case of the last ten years only, in which there have been two periods of considerable set-back in earnings and profits, the net profits have aggregated $80,155,000, of which $39,659,000 has been paid away to the stockholders, and the balance of $40,496,000 rendered available for capital purposes of various kinds. The carrying out year by year of this conservative policy is the real secret of the great financial strength of the Louisville, for by turning back into the property large sums of money out of profits it has been possible to keep down the capital account to a relatively low figure.

The efforts made last year to offset in part the great shrinkage in gross receipts are particularly noteworthy. Very little change occurred in the outlays upon maintenance of way, but upon maintenance of equipment there was a reduction of nearly $2,000,000, rendered possible by the diminution in traffic and the fact that the condition of the equipment had previously been raised to such a high standard that some curtailment of expenditure could be made without in any way impairing efficiency. In the aggregate maintenance outlays represented 37.31% of the gross receipts, against under 36% in the previous year. As regards conducting transportation, there was a saving of $3,268,000, and the ratio to gross receipts was 36.33%, against 36.78% in 1913-14; but this by no means represents the full power of the officers of the road to economise, for it has to be remembered that the outbreak of the War struck such a sudden blow to activities in the South that railway earnings slumped heavily before the officers of the various roads had an opportunity of putting into practice a retrenchment policy. Further, several companies, and among them the Louisville, had certain improvement works under way which had to be completed before the economies, which the circumstances rendered absolutely essential, [illegible] these improvement works on the Louisville have now been brought into use, and are proving of distinct benefit in enabling the traffic to be handled with an increasing degree of economy, and the ratio of conducting transportation this year should show large diminution. An interesting feature of the Company's expense account is that the Company is spending more money upon maintenance of equipment than upon conducting transportation. Such an achievement is equalled by no other large railroad in the United States. As showing the liberality of the outlays for upkeep which has always characterised this undertaking, and as pointing to the fact that the highly satisfactory nature of the profit account in past years has not been due in any way to putting a curb on maintenance work, we would mention that in the 10 years to June last, out of total gross earnings of $515,000,000, no less than $177,000,000, or 34½%, was devoted to maintenance of the road and rolling-stock. The cost of conducting transportation in the same period was about $184,000,000. The course of expenses in recent years has been as follows:—

Operating Expenses of the Louisville and Nashville Railroad.

Yr. to June 30	Gross Earnings.	Maintenance of Way.	Maintenance of Equipment.	Conduct. Transp.	Gen. & Misc.	Total Expenses.

In the current year conditions have completely changed. The cotton grower is obtaining, and is likely to continue to obtain, a better price for his product, grain crops are abundant, and the need for bituminous coal and for iron ore is exceedingly great, in view of the large demands for equipment of all kinds by the railways and the heavy purchases of munitions of war by the Entente Powers. Furthermore, a very large amount of bituminous coal is being mined at the present time for export. Another factor to take into account is that the return to more normal conditions in the territory served will cause the spending power of the community to expand, and the demand for merchandise and miscellaneous traffic of all kinds that will thus be stimulated is likely to bring much additional traffic and earnings to the Louisville. Since the beginning of September gross earnings have been showing steady improvement, and this recovery is anticipated to continue. Up to the present, however, notwithstanding the greater amount of traffic coming to hand, the decline in gross receipts in the corresponding period of last year has not been made

good, but inasmuch as expenses, and more particularly the cost of conducting transportation, are being kept well in hand, net earnings have more than recovered to the level of two years ago. For the eighteen weeks to November 7 gross receipts have improved $411,000. The latest revenue statement is that for September, and this shows that a diminution of $134,000 in gross receipts for the September quarter was accompanied by an addition of $967,000 to the net earnings. In view of the improvement in gross receipts secured since September, and likely to continue to be witnessed, a much greater expansion than $1,000,000 in net earnings may be looked for this year. Indeed, it would not be surprising if without undue delay the dividend was raised to a higher level. Action upon the next dividend will be taken in the middle of December, and by that time the board will be in a better position to gauge the rate of profit than is the case at the moment. The severity of the shrinkage in earnings following upon the outbreak of war, the manner in which efforts were made to reduce expenses, and the improvement that has now set in, will be evident from the subjoined statement of the course of earnings and expenses since July 1914:

Recent Course of Earnings and Expenses, Louis. & Nash. RR.

The December half year, as a rule, is the most profitable six months for the Louisville, and in normal times it may be said that practically the whole of the year's dividend requirements are earned in that period. The net profit for the December half of 1914 amounted, however, to only $2,675,000, so that, apart from any change in net earnings since September, the profits for the current half-year will be sufficient to pay a year's dividend of 5%. If, however, net earnings continue to expand in the current quarter, as we anticipate they will, it would not be surprising to find that for this half-year the Company will have earned at least 6% on its stock.

Owing to the disturbed conditions of last year no new extension work is being undertaken at the present time, attention being concentrated upon adding to the physical strength of the existing road and in thus rendering practicable economies of operation not hitherto possible. In recent years great strides have been made in adding to the tractive power of the freight locomotives, and further progress has been made in the past year, the average tractive power of the freight engines at the end of June having been 35,378 lb., against 33,982 lb. a year earlier and 28,324 lb. 10 years ago. The capacity of the freight cars has likewise been increased, the average capacity per car having been raised to 39.11 tons at the end of June. The strengthening of the track is a matter that has always engaged careful consideration, and with a view to enabling heavier trains to be run the weight of rail on the track is being rapidly increased. As recently as 1911 the standard rail weighed 80 lb. per yard, and only about a dozen miles were laid with rails of heavier types. At the end of June no less than 1,052 miles were laid with rails weighing 90 lb. and over, compared with 626 miles in June 1914.

Owing to the possession of a large number of branch lines and a somewhat scattered mileage, it is not possible for the Louisville and Nashville to secure such heavy freight train loads as do some of the leading railroads in other parts of the country. Nevertheless, steady progress in the loading of the trains was made each year until 1913-14. Since then a very noteworthy improvement has occurred, and whereas between 1905 and 1914 the train load increased only from 229.15 tons to 296.58 tons, it has been raised in the past year to 347.47 tons. This better loading has permitted of a great saving in freight train mileage which in turn is reflected in the reduced cost of conducting transportation. Perhaps a better idea of the achievement secured last year in operating the freight trains is obtainable from comparison with the figures for 1910. Five years ago the volume of freight traffic—ton miles—was only slightly less than that of the past year, but the freight train miles run were then 18,396,000 against only 14,815,000 miles run last year. With practically no variation in the volume of traffic, there has thus been a saving of about 20% in the train mileage. The improved working of the freight traffic last year will be appreciated from the statement given below:—

Freight-Train Results, Louisville and Nashville RR.

At the present time the capacity of the road is in excess of traffic requirements, but it is quite evident that the work of constructing a large amount of additional second track must be considered in the next few years. Ability to raise the necessary new capital that may be needed is afforded by the strength of the undertaking, and any steps that may be made in that direction would doubtless consist of the issue of Common stock to existing stockholders. Such an issue would, of course, be of pecuniary advantage to stockholders, as the new stock would probably be offered at par. At the end of June last the Company had $14,155,000 of cash in hand or on deposit, against $13,814,000 a year before. Exclusive of materials and supplies, current assets amounted to $18,718,000, against current liabilities of less than $8,800,000.

The amounts and prices of, together with the yields afforded by, the Company's principal securities are shown below:—

MISSOURI PACIFIC RAILWAY.

With a view to inducing the more prompt deposit of securities under the plan of readjustment, and thus bringing to a speedy conclusion the receivership in which the undertaking is now involved, the readjustment managers, together with the several Protective Committees with whom they are acting in co-operation, have compiled an interesting analysis which we publish on subsequent pages. The object of the analysis, together with a map which has also been prepared, is to show more fully than in the plan of readjustment published in July last how the various bonds of the system are affected, and the reasons for the treatment accorded to them under the plan. It will be recollected that originally it was proposed to carry through a voluntary readjustment of the capital of the system, whereby, *inter alia*, certain existing bonded indebtedness should be exchanged for junior securities, and an assessment of $50 a share should be paid on the Common stock, in return for which stockholders were to receive an equal amount of new General Mortgage 4% Bonds. The scheme was certainly a bold one considering the interests involved, but not unexpectedly it failed to be carried out through insufficient deposit of securities. Consequently, in August recourse had to be made to the Courts, and the former President, Mr. F. B. Bush, was appointed sole receiver, so that what security-holders failed to agree to voluntarily is now practically forced upon them.

It certainly behoves all holders of securities affected to deposit as soon as possible, for if the existing plan, which was drawn up only after very careful consideration, is not accepted, security-holders cannot hope to obtain better treatment under any new plan that might be proposed. The appointment of a receiver, too, emphasises the need for prompt co-operation in carrying through the reorganisation scheme. Judging from recent advices from New York, the amount of securities so far deposited is still relatively small, and, consequently, the time within which further deposits may be made has been extended to December 15 next. It is to be hoped that security-holders will recognise the necessity of curtailing as far as possible the delay and expense incident to receivership and foreclosure, and will promptly send their securities to the various depositaries. Only by so doing can the system be speedily restored to its owners, its credit re-established, and funds provided for future requirements. In all about $41,000,000 of new cash is required under the readjustment scheme, and the burden of providing this falls upon the stockholders; but after taking into account the value of the General Mortgage Bonds to be received upon the payment of a $50 assessment, the net burden of the cash assessment is reduced to between $17½ and $20.

FOREIGN RAILWAY RESULTS.

NORTH-WESTERN OF URUGUAY RAILWAY.

The financial depression in South America accentuated by the European war, has caused a further big reduction in the earnings and profits of the North-Western of Uruguay Railway, and last year's results are the poorest for a long while past. Indeed, the profit for dividend amounted to only £2,910, as against £6,635 in the preceding year and nearly £16,000 in 1912-13. Of course, no dividend is possible on the first Preference stock, which was also passed twelve months ago. Then, however, the balance carried forward amounted to £6,878, and adding this to the profit of £2,910 earned last year the directors are able to set aside £2,000 to the renewals fund, £5,026 to general reserve, and to carry forward £2,762 to the current year. The gross receipts show a decrease of £13,235, or 20.7%, but as this was accompanied by a reduction of £8,463 in working expenses the decline in net earnings is £4,772, or 7.4%. The total net income, including the Government guarantee, amounts to £32,330, which compares with £37,304 last year, £43,841 in 1912-13, and £44,627 three years ago. The relatively heavy drop in the Company's earnings and profits will be seen from the following statement:—

North-Western of Uruguay Railway.

	1914–15	1913–14	1912–13	1911–12	1910–11	1909–10

The bridge over the Cuareim River, linking this Company's line with that of the Brazil Great Southern, and so giving direct rail communication with Southern Brazil, was opened for traffic on July 1 last, and the board anticipate the opening up of fresh sources of traffic. Indeed, the new link may have an important bearing on the future prosperity of the Company as soon as the present abnormal conditions pass away. Southern Brazil has undoubtedly suffered badly from the financial depression of the last two years, but until the crisis commenced there were signs of the district becoming a great place for cattle, and it is in this traffic, as well as in timber, of which there are large tracts in the neighbourhood, that the Company hopes to obtain a considerable increase of revenue. Moreover, the Brazil Great Southern Railway has in recent years extended its system further northward, and a large stretch of new territory is being opened up, which, with better times, is likely to create a considerable amount of additional traffic over the North-Western of Uruguay Railway. On the whole, therefore, the outlook is distinctly encouraging. It may, of course, take some little time for the financial and economic conditions of the country to thoroughly right themselves, but the present demand for Uruguayan produce of all descriptions, and the high prices ruling, will greatly help to bring about a better state of affairs. Already the Company is benefiting by the greater activity of trade, and in the first quarter of the current year traffic receipts have risen by over 30%. In the last few years the Company has devoted a good deal of attention to consolidating and strengthening its position, and when normal times again return there is no doubt that it will enjoy the fruits of its enterprise in the shape of a large increase in earnings and profits.

The capital of the Company is as follows:—

MIDLAND URUGUAY RAILWAY.

This Company was not able to reduce expenditure in the past twelve months to anything like the extent of the falling-off in earnings, with the result that in order to meet its interest charges in full a transfer of £10,000 had to be made from reserve. The decrease in gross receipts was £15,209, whereas the saving in

expenditure was only £7,258, and there was thus a diminution in net earnings of £7,951, or nearly 12%. The general condition of the line, the directors state, which had suffered from exceptionally heavy rains during the previous financial year precluded any great economy being made in permanent-way expenses, as considerable extra expenditure for drainage and maintenance had to be met. All other working expenses were, however, reduced to the lowest possible point, although the increased cost of materials minimised the result. The falling-off in traffic was general, and is, of course, due to the adverse conditions in Uruguay consequent on the European war. The number of passengers carried declined nearly 20%, and the receipts therefrom show a decrease of 22.5%. Goods traffic, other than Company's materials, amounted to 83,147 tons, as against 104,515 tons, a decrease of 20.4% in tonnage and 19.1% in receipts. Animal traffic was reduced by 12.5%, but owing to the receipt of more advantageous rates than formerly the earnings increased 24.2%.

That the unfortunate events of the last two years have told heavily against the Company will be apparent from the following comparison of the main results of working since 1905:—

Midland Uruguay Railway.

Year ended June 30	Miles Open	Gross Earnings	Expenses	Ratio	Net Earnings	Government Guarantee
		£	£	%	£	£
1915 ...	320	113,133	101,942	90·11	11,191	79,847
1914 ...	320	178,342	109,200	85·08	19,142	79,984
1913 ...	291	133,437	94,447	70·79	38,990	70,892
1912 ...	285	116,470	87,544	75·15	28,926	79,654
1911 ...	238	100,192	75,706	75·55	24,486	55,181
1910 ...	197	88,660	67,479	76·16	21,181	55,481
1909 ...	197	81,506	71,114	87·25	10,389	55,523
1908 ...	197	72,172	67,157	93·00	5,019	55,363
1907 ...	197	75,888	60,833	80·15	15,055	55,439
1906 ...	197	69,555	59,324	85·14	10,229	55,481
1905 ...	197	63,397	50,424	79·53	12,974	56,000

It will be seen that the Company's lines have been considerably extended in the last few years, but the capital involved has not yet had a chance to become remunerative. The Fray Bentos extension is only in its infancy and much may be expected as time goes on from the new traffic route which the line has established from Southern Brazil over the connecting line of the Northern and North-Western of Uruguay railways. Moreover, the Tres Arboles to Piedra Sola extension (35½ miles in length) was only opened to traffic in April 1913, so that sufficient time has not yet elapsed to test the value of this important feeder, especially having regard to the untoward happenings of the last two years. The position at the moment is, therefore, somewhat unfortunate, as much of the capital spent on new extensions is as yet quite unproductive. There is no doubt, however, that the seed has been sown for a progressive future, and as soon as Uruguayan affairs again become normal a marked increase in the prosperity of the undertaking should be shown. Distinct signs of recovery are already apparent, for in the first four months of the current year the traffic receipts of the line have advanced by over £10,500. To show the existing charges of the Company, and how they are provided, we give the following statement:—

URUGUAY NORTHERN RAILWAY.

The Uruguay Northern Railway Company has been badly hit by the untoward events of the past twelve months. Its gross earnings amounted to only £18,955, against £26,637, a decline of £7,682, or 28.8%, which, coming as it does on top of a diminution last year compared with 1912-13 of nearly £4,000, shows the severity of the crisis through which the Company is passing. On the other hand, the working expenses total £17,510, as compared with £21,041, and the net earnings come out at only £1,445, as against £5,596. Such a margin is, of course, insignificant when compared with the interest liabilities of the Company, which in the aggregate amount to over £20,000. Thanks, however, to the Government guarantee, which last year produced approximately £20,000, fixed interest charges are fully covered, and there is a profit for the year of £1,324. Adding to this the amount brought forward from 1913-14—namely, £7,335—there is an available balance of £8,659, a sum equal to a dividend of nearly 3½% on the 7% Preferred stock. But in view of the present abnormal conditions due to the European war the board do not consider it expedient to recommend any dividend on the stock, and propose that the whole of the balance be carried forward. The general goods traffic and the passenger movement suffered considerably, the directors state, from the dislocation of trade and commerce in the country, but there was a small increase in animal traffic. The killing establishments opposite the Company's terminus at San Eugenio, which are engaged in the preparation of jerked beef for the Brazilian market, show a reduced output, the tonnage put on the Company's line during the year being 4,327 tons, as compared with 10,820 tons in 1913-14. How long the present abnormal conditions will obtain in Uruguay depends to a large extent upon the duration of the War. At the same time, it should be borne in mind that the produce of the country is in demand at high prices, as a result of the European conflict, and that the wealth of farmers and merchants is being rapidly augmented thereby. Sooner or later this will tell in favour of the railway companies, and although it may take some little time for a complete restoration of confidence and a general recovery in trade, the position at the moment is distinctly more favourable than it was twelve months ago. The improvement in traffic receipts now being experienced seems to indicate that the worst has been seen. The following comparison of the main results of working for the past six years shows the adverse effect of the trade reaction upon the Company's prosperity:—

Uruguay Northern Railway.

The price of the 3½% Perpetual Debenture stock is 44½. In addition to its 3½% interest the stock is entitled, under the 1892 arrangement, to two-thirds of the net profits, which last year produced £963, a sum equal to an additional 4*s*. 3*d*. per cent. interest on the issue, or £3 14*s*. 3*d*. in all. On this basis the yield at the present price is as much as £8¾ per cent. It should be recognised that the strength of the issue rests on the ability of Uruguay to meet its guarantees, and seeing that Uruguayan Government bonds are now valued on a 5½% basis, there is room for considerable improvement in the Company's Debenture stock, which is undoubtedly greatly undervalued at 44½. The capital of the undertaking is as follows:—

Uruguay Northern Railway.

Security	Amount	Interest	Price	Yield
	£	%		£ *s*. *d*.
3½% Perp. Deb. stock ...	449,400	£3 11.3	44½	8 14 6
7% Pref. stock (Cum.) ...	250,000	Nil	34	—

NITRATE RAILWAYS COMPANY.

The Nitrate Railways Company has been able to resume the amortisation of its First Mortgage bonds much sooner than anticipated. Indeed, it was only in November last that the suspension of the sinking fund was agreed upon, and that, too, for the duration of the War, or until January 1, 1918, inclusive, whichever was the earlier date. It was also provided that during such period no dividend should be paid on the Ordinary shares. The announcement, therefore, that the next drawing of bonds will take place on December 1 has come as an agreeable surprise, especially as it is coupled with the declaration of an interim dividend of 2% on the Ordinary Unconverted shares and on the Preferred Converted Ordinary shares of the Company. Twelve months ago the dividend was 2½%, but, as no final distribution was made, this also was the rate for the year. The position of the Company has greatly improved of late owing to the big demand for nitrate from the United States and elsewhere for explosive and other purposes, and whereas in the middle of August the falling off in earnings was approximately £250,000, now the decline is under £220,000, and if the present rate of improvement continues, as it may, the results for the year will not be unsatisfactory. It is probable, moreover, that any decrease in receipts will be accompanied by savings in expenditure and that the net earnings will show only a comparatively small diminution. Last year, it will be recollected, the Company showed a profit for dividend of £66,000, but inasmuch as this figure was arrived at after allocating something like £157,000 to the sinking fund, the actual profit for the year was as much as £223,000, a sum equal to a dividend of 13% on the share capital. Of the total sinking-fund appropriation, however, £100,000 was in the nature of a voluntary contribution, so that, after making normal provision for redemption of debt, a dividend of fully 10% was earned on the Ordinary shares. Thus the position is quite satisfactory, and even if there is a further diminution in net revenue in the current year a higher dividend than 2½% will possibly be distributed, assuming, that is, that the extra and voluntary contribution to the sinking fund is for the time being suspended. The amount of Mortgage bonds outstanding is now only £248,400, out of a total of £2,000,000, so that even under normal conditions the extinction of the bonds can be completely accomplished with a relative short space of time. The real difficulty in the nitrate fields at the moment is the shortage of labour, but this is gradually righting itself, and with the price of nitrate at a very remunerative figure doubtless many oficinas closed down at the beginning of the War will reopen at no distant date, and the traffic receipts of the Railway Company should steadily expand. The price of the Undivided Ordinary shares is now 10¾. The Preferred Ordinary shares have risen to 7 and the Deferred Ordinary to 24*s*. 1½*d*.

Insurance Notes.

NORWICH UNION FIRE INSURANCE SOCIETY, LIMITED.

The outcome of this Company's operations in 1914 allows of the maintenance of the dividend at the rate of 32*s*. per share, concurrently with a satisfactory increase in the reserves. The capital amounts to £1,100,000, of which £132,000 is paid up, in 44,000 shares of £25, with £3 paid on each. The dividend had been increased in 1914 by 2*s*. per share. The current rate, it will be seen, is 53⅓% on the amount paid up. Interest at the stipulated rate of 4% is also payable on £580,000 Debenture stock, which was issued in connection with the purchase of the Norwich and London Accident Company a few years ago. The amount required for the dividend and the Debenture interest has been nearly covered by net interest earnings on investments, while the greater part of the considerable trading profits has been unappropriated. Looking to the special difficulties of the year under review, this appears to be a satisfactory result, and there seem good reasons for the belief that the Company should be able to maintain and also in due course, on a return to more normal financial conditions generally, and in the absence of any disturbing factors such as the occurrence of exceptional conflagrations, to gradually increase its distribution to shareholders.

The Company transacts fire, accident, and employers' liability, and also marine insurance business. Its fire account for 1914 shows a premium income, increased by £24,942, amounting to £1,212,611. After payment of claims and expenses, and adjustment of the reserve for unexpired risks at the standard of 40% of the premiums, as formerly employed, the trading profit appears to have amounted to £52,087, that sum having been transferred to profit and loss account. This represents about 4.3% of

the premiums. Although a small ratio for a non-conflagration year, the proportion is higher than shown by several of the Company's contemporaries engaged like itself in the transaction of a large and world-wide fire business. The fire fund at the close of the year, after the adjustments referred to, amounted to £1,284,357, or to about 106% of the year's premium income, which discloses a strong departmental position.

Better results are shown in the accident and employers' liability account. Here the premium income, increased by £16,848, amounted to £416,343, and the trading surplus, arrived at in the same way as in the fire section, to £55,338, or to about 12.7% of the premiums. After transfer of this sum to profit and loss, the relative fund, exclusive of £162,473 reserved in respect of estimated liability under outstanding claims, amounted to £173,277, or to 40% of the premiums, being the estimated amount of the liability under risks unexpired at the close of the year.

The marine section is a comparatively recent development of the Company's activities, and no profit has as yet been taken into account from this source, although the position of the account suggests that substantial profits have been made, although unencroached upon. The Company's marine premium, increased by £45,287, amounted in 1914 to £108,859, and the fund at the close of the year, increased by £54,779, to £105,575, which looks strong.

The combined trading profits from the fire and the accident and employers' liability accounts amounted to £107,425. To this has to be added £82,107, representing the excess of interest earnings, fees, and profits from sale and maturity of stocks (together amounting to £97,635) over income tax and bad debts (together, £15,528). The dividend as declared on the Ordinary shares, inclusive of provision for income tax, requires £70,400, and the Debenture interest paid during the year, less income tax, amounts to £21,412. The balance carried forward to 1915, after provision for the ordinary dividend and tax, seems to amount to £124,120. It shows a substantial increase over the balance carried forward last year, and it is pointed out that in this way special provision has been made for depreciation of Stock Exchange securities and other contingencies arising out of the War. In 1913 £69,996 was applied in writing down securities to market prices at the close of that year. The total assets in the Company's balance sheet on December 31, 1914, amounted to £2,802,980, and it is reported that the Stock Exchange securities were taken "at or below the market value on December 31, 1913, less accrued interest and dividends, with the following exceptions—viz., (1) United States securities taken at the market value on June 30, 1914; and (2) all other securities purchased during the year 1914 appear at cost."

The directors refer in their report to the loss which the Company sustained owing to the death in January of their colleague and former General Manager, Mr. C. A. Bathurst Bignold. Mr. Bignold had been intimately connected for a period of 34 years with the Society, which was founded by one of his ancestors 117 years ago. His grandfather, Sir Samuel Bignold, was Manager of both the Norwich Union Fire and the Norwich Union Life Societies for over 50 years, and his father was Manager for many years of the fire Company. Such a record is quite exceptional in the history of insurance, and the best proof of the value of the services of the Bignold family to these institutions is to be found in their flourishing position at the present day.

ECCLESIASTICAL INSURANCE OFFICE, LTD.

This strong and well-managed Company was not founded for purposes of profit, but rather with the view of benefiting charitable institutions in connection with the Church of England, concurrently with the provision for the insurance of churches and church property. These purposes have been very successfully carried out. The capital amounts to £250,000, of which £25,000 is paid up, in shares of £10 with £1 paid on each, and dividends thereon are strictly limited under the Company's constitution to 5% per annum, which has been regularly paid since the establishment of the Company in 1887. The premiums charged have been at the lowest tariff scale, and after payment of the dividends referred to, a sum of £192,480 up to the close of 1914 had been distributed amongst various institutions, while reserves have been built up and maintained at an exceptionally high standard. The Company has therefore special claims upon the support of the clergy and of churchwardens. It is explained in the annual report for 1914 that the Company is careful not to retain at its own risk the whole of any large insurance effected with it, but reinsures in such a case the portion which experience shows to be in excess of a safe limit in the particular circumstances. This course of procedure renders it impossible for it to suffer more than a moderate loss by any one occurrence, and to the care with which individual risks are thus limited, and the exceptional economy with which the business is conducted, the success of the operations is in large measure due. No risks are accepted to which undue hazard attaches, and no business of any kind is transacted outside the United Kingdom. The Company therefore fills a very useful place in economic insurance, and it appears that a large field is still offered to it, for the under-insurance of churches and church property is still a regrettable circumstance, owing to reliance on the old-fashioned system of "sending the hat round," for which since the establishment of this Society there has been no valid excuse. The Company also transacts employers' liability insurance in respect of church workers and domestic servants, as well as burglary, glass, and personal accident insurance in suitable cases.

In the financial year ended February 28, 1915, the Company's premium income, increased by £2,123, amounted to £83,210, the total revenue to £96,303, and the claims and expenses to £55,341. After provision for the usual dividend and adjustment of reserves for unexpired risks there was a surplus of £39,711, of which it has been decided to distribute £20,000 in grants to Church societies, the balance of £19,711 being added to the reserves. The fire insurance fund now amounts to £165,329, and the employers' liability and other reserve funds to £101,976—together, £267,305, representing about 321% of the year's premium income, an extraordinarily high proportion. Apart from this, there is an investment fluctuation fund of £30,000. Total assets, February 28, 1915, £352,189.

AERATED BREAD COMPANY.

It is certainly not at all surprising that the Aerated Bread Company should show considerably smaller profits for the year to September 1915 than those of any recent years. As a matter of fact, the trade increased substantially during the year, but the diminution in profit is caused by the increased cost of everything dealt in and used by this Company "and by increased wages, war bonuses, and allowances to dependants of employees who are serving their country." In the year to September 1914 the trading exceeded in volume anything that previously happened, and it was a matter of considerable satisfaction to find that after a period of going downhill, followed by one of marking time, distinct signs of the attainment of a greater state of prosperity were evidenced, thus showing that the changes which were brought about, following on the dissatisfaction expressed by shareholders in the early part of 1910, were justified, and that greater

As is well known the Company is one of the oldest of its class doing business in London, and at one time

it rather appeared as if the management was inclined to remain satisfied with the achievements of the past and ignore new conditions that have come into existence in recent years, particularly the increase in competition occasioned by the coming into the field of strong concerns, partly attracted by the substantial business built up and the large profits secured by the Aerated Bread Company. Naturally, in face of this, any slackening of effort would soon prove fatal if not checked. Fortunately the shareholders were alert, and though the board was apparently inclined to adopt the position of regarding itself as being above criticism, a determined effort was made to bring about reforms, with the result that a steady improvement set in. So far as the net profits are concerned, the War has temporarily brought this to an end, and the dividend for the past twelve months is smaller than it has been for very many years past. For the years 1899 to 1903 the dividend was at the rate of 42½% per annum, but since then a much lower rate has prevailed, and for the twelve months to September 1911 the distribution was 22½%. For the following year this was increased to 25%, which was followed by a distribution of 27½%. But the less satisfactory results of the past year have brought the dividend down to 17½%.

To show the vicissitudes of recent years we set out a statement of the net profit, dividends paid, and market price of the shares of the Company for each year since 1897:—

Year ended September	Net Profit	Dividend Amount	Dividend %	Market Price of Shares Highest	Market Price of Shares Lowest
	£	£		£	£
1915	36,003	29,949	17½	4½	3
1914	75,126	49,845	27½	4⅝	4⅛
1913	77,023	49,965	27½	4⅝	3¹⁵⁄₁₆
1912	56,518	45,425	25	3⅞	2⅞
1911	46,492	40,882	22½	4⅛	3⅛
1910	48,534	45,424	25	4⅛	3⅞
1909	53,350	50,169	27½	4¹³⁄₁₆	3⅞
1908	55,886	50,409	27½	6⅝	4⅛
1907	72,904	68,740	37½	7⅞	5¹³⁄₁₆
1906	85,474	68,743	37½	7	5⅛
1905	66,411	59,584	32½	6⅜	5⅛
1904	67,565	57,855	30	9⅛	5¹³⁄₁₆
1903	85,426	80,694	42½	13⅞	9⅛
1902	82,063	78,975	42½	15⅛	12⅛
1901	77,277	76,989	42½	15⅛	12⅛
1900	79,518	74,983	42½	15⅛	12⅛
1899	83,995	72,944	42½	15⅝	12½
1898	67,638	66,458	40	14½	11½
1897	69,334	58,622	37½	12⅞	9⅛

The gross profit for the year to September 1915 has amounted to £286,919, as compared with £313,029 for the previous year; but this was accompanied by a rise in expenses from £240,350 to £253,146. After providing for depreciation, the amount available for distribution fell from £47,126 to £28,003.

Contrast of the results of the last fiscal year with the five preceding years is set out below:—

Year to Sept.—	1915	1914	1913	1912	1911	1910
	£	£	£	£	£	£

* Includes £4,825 bonus to staff.
† £20,000 for improvements and extensions.

At the meeting on November 8 the Chairman gave instances of how the costs had increased during the year. He pointed out first of all that they had served more customers and took more money than in any previous year of the Company's existence. But the increased price of food has been enormous. On five of their staple articles—sugar, flour, meat, tea, and butter—the average increase had been over 36%, to meet which they had increased their scale of charges on several articles. He then referred to the complaints that had arisen from the raising of the price of a cup of tea from 2*d.* to 2½*d.*, pointing out that the recent increased duty of 4*d.* per pound was a further increase beyond 3*d.* previously imposed. "Moreover, if they took the three ingredients of which a cup of tea was usually composed, in addition to the water, they now had tea 50% higher, milk 30% more, and sugar 120% more, an average of 66⅔% more; in addition to which fuel and the mechanical appliances for heating the water cost more, and china cups and saucers were much dearer than they were when 2*d.* per cup was a moderate price. Their profit had also been considerably affected by increased working expenses, rates and taxes, fuel, forage, and so on."

The authorised capital is £250,000, in £1 shares, of which £192,954 has been issued. At September 25 last the Company had secured a loan from its bankers which, with accrued interest, amounted to £35,224. This was due to a purchase of £42,700 of War Loan in order to convert the holding of Consols. There is no reserve fund. Herewith we summarise the liabilities and assets as at September 25 last:—

LIABILITIES.	£	ASSETS.	£
Issued capital	192,954	Property, plant, &c. ...	227,390
Loan from bankers	35,224	Stock	21,568
Sundry creditors	69,405	Sundry debtors	9,623
Profit and loss	39,260	Investments	70,027
		Cash	8,237
	336,843		336,843

The outlook is not very brilliant, of course, at the moment. True the business continues to increase, and, as far as possible, the directors aim at not having to increase prices. But when normal conditions are again resumed there seems no reason why a return should not be made to former prosperity. At the present price of 58*s.* for the £1 shares the yield afforded on the basis of last year's distribution of 17½% is about 6%.

DALGETY AND COMPANY.

TWELVE months ago the outlook for Australian pastoral companies for the year to June 30, 1915, was distinctly poor. At the meeting of Dalgety and Company held on November 19, 1914, the Chairman, referring to the conditions in Australia, said that he feared that the season generally must be a poor one. Drought prevailed in Western Australia and there had been very heavy losses of sheep, while in South Australia things were just as bad. Rains were needed in Queensland. In New South Wales, in the Central and Eastern districts, prospects on the other hand were fair, but in the West and Riverina districts conditions approaching drought prevailed. As a slight set-off dairying prospects in New South Wales and Queensland were excellent, though poor elsewhere in Australia. In New Zealand pastoral prospects were good, and agricultural and dairying fairly favourable throughout the Dominion. The adverse season conditions in Australia prevailed for the greater part of the year, and the report of Dalgety and Company points out that of late there had been a marked improvement. In Western Australia the drought is completely broken up, while South Australia has been favoured with good rains over an extensive area. In Victoria the country is now enjoying an excellent season. Favourable conditions also prevailed over the greater part of New South Wales, but in Queensland it is for the most part dry, though the conditions have been somewhat relieved by sporadic rains. New Zealand, on the whole, is distinctly prosperous. Wool prices throughout the year have been well above the average. Dairying prospects are not encouraging, as a short output is expected. On the other hand, all indications at the moment point to a record wheat crop, but the provision of adequate steamer tonnage will be a matter of great difficulty.

The Company has an authorised share capital of £4,000,000, in 200,000 shares of £20 each, of which

only £5 per share has been called up; while there have also been issued Irredeemable Debenture stock and Terminable Debentures, so that the total combined share and loan capital issued at present consists of the following:—

		£
4½ % Irredeemable Debenture stock		509,749
4 % „ „ „		1,753,391
Terminable Debentures, 5 %	£105,520	
„ „ 4 %	289,598	
		395,118
5 % Preference shares, £10 paid		500,000
Ordinary shares of £20, each, £5 paid		1,000,000
Making a total of		£4,158,258

It will thus be evident that the business is one of considerable magnitude, and it may be added that the total assets of the Company on June 30 last were valued at no less than £7,442,337, the main item of which, standing at £4,119,579, represents advances on land, station, stock, wool, and other produce. The Company had accumulated a reserve fund of £550,000, against which there were shown gilt-edged investments, valued at £385,000, and the Bishopsgate freehold premises of the Company, standing at £165,000. In addition to the reserve fund, a total sum of £260,000 has been applied from profits for the purpose of writing down the premises. Herewith we set out a summary of the liabilities and assets of the Company as at June 30 last.

LIABILITIES.	£	ASSETS.	£
Issued share capital ...	1,500,000	Premises, plant, furniture, &c.	625,427
Irred. Deb. stock	2,263,140	Investments	886,307
Terminable Debentures ...	395,118	Bills receivable	173,893

Bills payable	121,518	Sundry debtors	731,680
Produce realised	69,548	Cash	634,957
Balances in transit	192,810		
Profit and loss	348,687		
	7,442,337		7,442,337

In spite of the fact that seasonal conditions have been adverse during the greater part of the year, plus the upset and anxieties consequent on the War, the Company has done exceptionally well, and the shareholders and the management are distinctly to be congratulated on the fact that the past twelve months have proved the most prosperous in the Company's history, the net trading profits amounting to £582,097, as compared with £570,509 for the previous year. In spite of this substantial increase in trading profits, no alteration is made in the dividend, which remains at the 8% that has been distributed for each year since 1910. It may be recalled that the Company was able to maintain its dividend at the comparatively high rate of 5% throughout the most troublous times witnessed in Australia, and for a Company to pass through the financial crisis that occurred in the nineties and the ensuing drought without reducing its distribution below 5% affords ample testimony to the financial policy carried out, and the consequent strength of position built up.

To show the rate of dividend paid since the formation of the Company we give the following:—

Dividends to June 30, 1915.

Year ended June 30	Dividend %	Year ended June 30	Dividend %	Year ended June 30	Dividend %	Year ended June 30	Dividend %
1885 ...	6	1893 ...	8	1901 ...	8	1909 ...	7
1886 ...	7	1894 ...	8	1902 ...	7	1910 ...	8
1887 ...	7½	1895 ...	8	1903 ...	5	1911 ...	8
1888 ...	8	1896 ...	8	1904 ...	5	1912 ...	8
1889 ...	8	1897 ...	8	1905 ...	6	1913 ...	8
1890 ...	8	1898 ...	8	1906 ...	7	1914 ...	8
1891 ...	8	1899 ...	8	1907 ...	7	1915 ...	8
1892 ...	8	1900 ...	8	1908 ...	7		

Though the net trading profit for the past year shows an increase of £11,500 over that for the previous year, owing to the fact that a rise of £4,000 has occurred in current expenses, one of nearly £8,000 in the amount required for income tax, and one of £2,000 in the Debenture interest, the amount available for distribution shows a slight falling off amounting to £226,746, as compared with £229,002. After providing for the Preference dividend, there is a surplus of £201,746, which is sufficient to provide for a dividend of 20% on the Ordinary capital. But, as stated, the rate is maintained at 8%, while £40,000 is applied to writing down cost of premises, bringing the total up to £300,000 set aside for this purpose, £50,000 is added to the reserve fund, thereby raising it to £600,000; and £10,000 is carried to the staff benevolent fund; and the carry-forward is increased by £11,672 to £208,686—a sum nearly sufficient to provide for a year's Debenture interest, Preference dividend, and an 8% Ordinary dividend.

We further show the manner of the distribution of the profits for the past six years:—

Year ended June 30—	1915	1914	1913	1912	1911	1910
	£	£	£	£	£	£
Net trading profit ...	582,097	570,509	562,229	546,877	551,371	542,534
Management expenses ...	207,378	203,135	197,609	186,712	185,270	170,900
	374,719	367,374	364,620	360,165	366,101	371,634

Debenture interest ...	107,377	105,593	108,326	112,992	117,232	122,364
	226,746	229,002	231,894	224,678	225,417	226,917
Preference dividend ...	25 000	25,000	25,000	25,000	25,000	25,000
	201,746	204,002	206,894	199,678	200,417	201,917
Dividend	80,000 (8 %)	80,000 (8 %)	80,000 (8 %)	80,000 (8 %)	80,000 (8 %)	80,000 (8 %)
	121,746	124,002	126,894	119,678	120,417	121,917
Reserve, &c.	110,074	19,520	118,517	117,240	116,279	115,109
	11,672	104,482	8,377	−2,438	4,138	6,808
Brought forward... ...	197,014	92,532	84,155	81,717	77,579	70,771
Carried forward	208,686	197,014	92,532	84,155	81,717	77,579

As the Company has been able to do so well during the year when seasonable conditions have been largely adverse, now that better conditions prevail the outlook would appear to be for a further improvement during the current twelve months. The Ordinary share is of the denomination of £20, but of this only £5 is paid up, so that there is a somewhat heavy liability. The present quotation for the share is 5¾, and on the basis of an 8% distribution the yield is as much as £7 16*s.* 8*d.* per cent. Were it not for the liability attaching, it is probable that the price of the share would stand somewhat higher, but in view of the very strong position that has been built up, the possibilities of a call seem somewhat remote, and the present yield is certainly attractive. The £10 Preference share is quoted at 8, giving a yield of 6¼%. This also is a very satisfactory return for so well secured a share. The 4½% Debenture stock is quoted at 80, giving a return of £5 13*s.* 2*d.* per cent., and the 4% stock stands at 74¾, giving a yield of about 5⅜%. Both classes of stock are well secured, and form attractive Australian investments.

The following shows the capital, apart from the Terminable Debentures, prices, dividends, and yields afforded:—

Amount £	Description	Par £	Price £	Dividend %	Approx. Yield £ s. d.
509,749	4½ % Irredeemable Deb. stock ...	100	80	4½	5 13 2
1,753,391	4 % „ „ ...	100	74¾	4	5 7 0
500,000	5 % Preference shares	10	8	5	6 7 0
1,000,000	Ordinary shares, £20	5	5¼	8	7 16 8

* Free of tax.

TANJONG MALIM RUBBER COMPANY.

The [illegible] Company's £500,000 in £1 shares, all of which have been issued. The Company was formed in 1910 for the purpose of acquiring and cultivating with Para rubber and other products estates situated in the State of Selangor, in the Malay Peninsula, comprising altogether about 20,400 acres. The total area at present owned is 20,497 acres, which is made up as follows:—

[illegible]

During the past year it was decided to surrender 12,000 acres of the reserve land in order to save paying rent on it, and the surrender is now being carried

out. A further 17¼ acres has been rendered worthless for cultivation and has been abandoned.

The estimated crop of rubber for the year to June 30, 1915, was 565,000 lb. Excluding an increase estimated for the results of cultivation, of which very little was done owing to the War, the actual yield obtained was 580,691 lb. shipping weight. The yields per tree and per acre were as follows:—

	Average Trees Tapped. No.	Average Acres Tapped. Acres.	Total Yield Lb.	Yield per Tree. Lb.	Yield per Acre. Lb.
Southern Division ...	126,090	16,48½	430,345	3·59	261
Northern Division ...	14,410	746¾	150,346	3·38	201
Total	164,500	2,395¼	580,691	3·53	242

The average gross price received was 2*s.* 3.09*d.* per pound, as compared with 2*s.* 2.95*d.* per pound for the previous year, while the costs work out at 1*s.* 3.76*d.* per pound, as compared with 1*s.* 8.39*d.* per pound. The cost of production was 10½*d.* per pound, as against 1*s.* 4⅜*d.* per pound last year, a reduction of 5⅞*d.* per pound. If the cost of depreciation and insurance be deducted the cost of production is reduced to 9½*d.* per pound. A sum of £4,137 has been set aside to meet depreciation in value of that part of the Company's cash resources which was in Antwerp when the War broke out. Had this setting aside not been necessary, the all-in cost for the year would have been 1*s.* 2.02*d.* per pound instead of 1*s.* 3.76*d.* per pound. The income from rubber has amounted to £59,462, as compared with £39,054 for the previous year, and adding other income there is a total of £62,007. After providing for expenses there is a profit of £26,514. By the terms of the original agreement with the vendor the Company is precluded from using the profits from the area taken over already planted for any purpose other than the payment of dividends. It is thus necessary to look to other income to write off the preliminary expenses, &c. Interest to the total amount of £7,819 has been earned by the Company since its formation, and that is now used to write down the expenditure referred to, leaving a sum of £19,161 to be dealt with in the future. The profits are sufficient to provide for a dividend of 5%, and a sum of £7,695 is carried forward. Particulars of the crops, prices and profits are appended:—

Year ended June 30	1915	1914	1913	1912	1911
Cultivated area (acres)	6,647	6,647	6,275	5,151	2,725

* Market weight.

We further set out a summary of the liabilities and assets as at June 30 last:—

LIABILITIES.	£	ASSETS.	£
Issued share capital	199,603	Estates	229,872
Sundry creditors, &c.	7,324	Estate expenditure	109,608
Drafts ...	12,380	Buildings, &c. ...	27,118
Profit and loss	40,513	Timber ...	3,002
		Stock of rubber	19,884
		Sundry debtors, &c.	2,102
		Agents' balances ...	12,911
		Preliminary expenses	10,000
		Underwriting commission	16,980
		Cash	29,403
	359,820		359,820

The estimated production for the current year is 750,000 lb., and though the yield per acre during 1914-15 was not high, being 242 lb., that is explained by the fact that probably only a proportion of trees in the younger fields were tapped. When the whole planted area is mature it would not be unreasonable to expect a yield of over two and a-half million pounds of rubber from the 6,647 acres planted. With a large area of immature rubber now rapidly coming into bearing it is not reasonable to expect at present further reductions in the costs on the same scale as last year, but during the current twelve months it seems fair to expect that the all-in costs can be brought down to somewhere in the neighbourhood of 1*s.* per pound, which would be quite satisfactory. Thus the Company should secure a net profit of at least 1*s.* 3*d.* per pound, which, on the estimated crop of 750,000 lb., would give a total net profit of nearly £47,000, which would permit raising the dividend to 9%. Should the net profit per pound reach 1*s.* 6*d.*, as is possible, the total profit would be £56,000, which would permit of a 11% distribution. As the planted area is so large it is not proposed at present to open up any new land, and the board consider it the wisest policy to endeavour to reduce the cost of production and improve the quality of the rubber. With the very large crops possible when the planted area is fully bearing as already indicated, and the cost of production brought down to a low figure—with possible future reductions—the outlook for large profits is very good. The present price of the £1 share is par. On the basis of last year's dividend of 5% free of tax, a yield of about 5⅛ is forthcoming. On a 9% basis the yield would be nearly 10¼%, and on a 11% basis the yield would be 12½%.

Correspondence.

WAR FINANCE.

To the Editor of "The Statist."

Sir,—The time is not far distant before the Government will have once more to appeal to the public for war loans. In my opinion a large amount of subscriptions could be raised if the Government made some such announcement as follows:—

"The Government are prepared to receive on deposit, until further notice, any sum or sums of money at 5% per annum interest, to bear any other higher current rate, to be repayable at any time after the declaration of peace on six months' notice by either side. The deposits will be received by any bank on Government account, and a special pass-book be issued to the depositor. Further deposits may be made as desired."

I think the suggestion has three good points to commend it, namely:—

1. Its adoption does not affect the aggregate deposits of joint-stock banks after Government disbursements. If the Treasury draws direct on the banks to the extent of the amount standing to the credit of the Government, the payees, as far as possible, being customers of the drawee, there will be no material displacement of cash.

2. A large proportion of bank depositors dislike stock or bonds, but would subscribe to war loans if their liquid capital were stated in a pass-book.

3. Large and small sums can be collected and merged with a minimum of expense, and the inflow should be continuous.

Provision might be made for depositors under this scheme to obtain at any time temporary advances from any bank to meet unforeseen calls, to an extent not exceeding their subscriptions on Government account, at a rate of interest 1% higher than the Government rate.

Depositors who desired to fix a deposit on Government account only for a definite period, say three, six, nine or twelve months, might be allowed Treasury bill current rates of interest, and be given a special deposit receipt.

With the willing and patriotic co-operation of the banks some such scheme as above stated might be made a great success.—Yours, &c.,

A. H. Gibson.

THE GRAIN TRADE.

SOME SPECIAL CAUSES OF DEARNESS.

Outside the use of [illegible] of separate inquiry by the Whitley Committee, there are three special causes now operating to produce dearness in articles dealt with at Mark Lane. These causes require sharply to be distinguished from one another before we can appreciate how the trade in corn and feeding-stuffs stands as a whole.

The first cause of dearness—that of inquiry increasing while supply is simply static—relates to a comparatively minor list of articles. None the less, the trade in some of them is considerable, and as a group they require to be studied by themselves. There is no doubt at all as to the absolutely non-speculative advance in prices for middlings, sharps, bran, brewery dried grains, distillery dried grains, malt, culms, and the like. These by-products of the mill, the brewery, and so forth are cleared off as soon as may be, the producers of the more valuable articles—flour, beer, spirits, &c.—requiring all their working space free. When, therefore, we have all these by-products 25 to 50% dearer than usual, while the output is static and there is no withholding, we may safely assume that retail and consumptive inquiry is much above the mean. It is of great importance to agriculturists to ascertain why and how this is so, but that inquiry is outside our scope. That which is of moment to our readers is the question of abating the scarcity by law or tariff. At present we import about 16 million cwt. of flour. If we were to buy that quantity of wheat instead we should have about four million cwt. more middlings, sharps, and pollard, and that without any increase in the price of bread. The retention of the by-products of the mill bids fair to be an economic question, not perhaps of quite the first rank, but at all events of very real moment.

The second cause of dearness is where, the demand appearing to be about stationary, the supplies are admittedly below the average. This is to-day the case with every description of British grain and pulse, and is traceable to one source—the want of labour. It is largely temporary. The need to sow the autumn crops and to lift and secure the potatoes and roots of the season is from the beginning of September to the end of November far more absolute than any other work. When with December these labours, which must be performed before the ground is frost-bound, have come to their natural termination, the farmer will be able to set his men to thresh and his carts to delivery of the threshed grain. Relief to the countryside is likely to be prompt. The cities are more or less in a state of siege, however, for the trucks, when laden up with grain at the local stations, by no means move off to London and other centres of consumption within 24 hours of the appointed load being duly loaded into the truck. Before the War there were time-tables for "minerals" and goods traffic no less than those for passengers. Few stations so small but to have one mineral train a day, and the leading distributing centres, such as Peterborough, Crewe, and the like, were almost as busy with goods despatch as with passenger trains. All this is now over, and the truth is that congestion has been on the increase for some months past. There is no guaranteed delivery by any specific date, and many purchasers, though paying cash, do not get the produce within a fortnight.

Outside these two causes we have that of speculation, and, while we cannot ignore this feature, we must resist a certain impulse, that exists in all times of crisis, to exaggerate it. The articles which are being kept up at very high prices by speculative importers are Canadian and American wheat and flour, Indian barley and peas, American maize, Burmese haricots, and all sorts of canary seed, sunflower seed, and also sundry bird seeds. One farm seed—wild white clover seed—has been completely captured, and the amazing price of 10s. per lb. is paid. This is just ten times the average price of an ordinary farm seed of good germinating power. The following articles have been withdrawn from the market under circumstances which are not convincing as to the supply being in reality very near exhaustion. We need only name Indian red wheat, Argentine wheat, Tunisian and Algerian barley, New Zealand, Dutch and Swedish oats, American and Cinquintino maize, New Zealand beans, Indian chick peas, and American buck wheat. Staples, which we miss, but under war conditions must miss, are Hungarian flour, Konigsburg tares, and Bavarian barley. The Hungarian flour we ought to be able to make at home: it is a mere matter of process. Why the War should have deprived us of Egyptian beans, Rhodesian maize, East African cotton seed, Australian oats, and Canadian linseed is difficult to say, but no rumour points to hoarding either here or in country of origin. The Canadian surplus of linseed is probably being absorbed by America, and, though the object may be that of shipment to Germany *via* Sweden, the Canadian seller, with an ostensibly friendly buyer at his own gate, cannot be subjected to criticism without considerable difficulty. The Government has taken steps to checkmate speculation in fertilisers, and there are sections of the corn trade which seem to invite the notice of the authorities. None the less should it be recorded that of the present three causes of dear-

NEUTRALS AND NON-CONTRABAND.

[illegible] position was dealt with at some length, particularly in relation to the United States competition, which had cropped up in markets hitherto a preserve of the Welshmen, which competition arose merely because our authorities were placing every conceivable obstacle in the way of British manufacturers doing business with

Holland, Denmark, Norway, Sweden and Greece it had for months past been almost impossible to secure export "permits" without the greatest difficulty and the most troublesome, vexatious, and costly delay, with the result that consumers of tinplates in the countries named were having their trade ruined owing to the restrictions placed in the way by us. The manifest injustice of stopping Welsh exports of tinplates to neutral European countries, while permitting the markets thus closed to us to be invaded without let or hindrance by the United States, constituted a very real grievance here, and it was pointed out, as a satisfactory solution from the Welshmen's point of view, that the British Government had made it a condition of the terms upon which the United States might obtain tin that the exportation from America to neutral Europe of tin in any form whatsoever should be subject to British "permits" in exactly the same way as if the finished material itself were of British origin. Our Government were enabled to do this because all tin of British Empire origin which is imported into the United States must be consigned to certain British Consuls, who will not release the metal under any circumstances unless comprehensive forms of guarantee are signed by United States consumers. The British Government thus virtually came into control of all United States exports of goods of which tin is a component part. The immediate result of this regulation coming into working order was that a large number of contracts which United States tinplate manufacturers had entered into with buyers in neutral countries, more particularly in Scandinavia, had to be cancelled, and it was not to be expected that the sellers would sit down quietly under the blow thus aimed at their trade. American tinplate manufacturers are now up in arms regarding the position which has arisen, and the matter appears to be reaching a head at the instance of a maker who endeavoured to send a consignment of tinplates to Sweden, alleged to be for *bona-fide* domestic consumption in that country, but whose goods were refused by the steamship companies on the ground, it is stated, that they were advised "in the British Consul's office" not to accept tinplates for Sweden. This is alleged to be "a peculiarly clear example of the methods employed by Great Britain in arbitrarily keeping English manufacturers out of neutral markets which she previously called her own."

The history of the transaction, which is regarded as typical of many others, was as follows: The United States makers concerned sold a thousand boxes of tinplates to a *bona-fide* consumer in Sweden on July 25. The plates were shipped from the mill on August 30 and reached New York on September 7. Freight room was engaged for September 20, on which date Great Britain had put into effect her regulations regarding United States imports of pig tin, which require that manufacturers importing pig tin on or after that date should agree that they could not sell tinplate to Norway, Sweden, Denmark, or Holland, except by shipping consignments *via* the United Kingdom. The shipping company thereupon notified that they could not accept the consignment without a formal "permit." The American manufacturers accordingly cabled the consignees in Sweden, who provided the proper authority with a sworn affidavit that the goods were intended for Swedish home consumption. This information was cabled to the Swedish Consul in New York, which document was sworn to and properly certified and presented to the British Consul, who refused to pass it on, stating that it was "not satisfactory." Consequently the steamship company refused to accept the goods for shipment.

There appears to be some force in the complaint of United States manufacturers that the British Government has no right to interfere in their export business in tinplate to neutral countries so long as it has not declared tinplate to be contraband; and there would appear to be some point in the complaint, too, that the refusal of the shipping companies to accept goods was because they were "quietly asked down to the British Consul's office, and advised by word of mouth that it would not be desirable for them to accept tinplate for Scandinavia at this time." It is very unfortunate that the action of our authorities should be so generally regarded by neutrals as arbitrary and illegal in dealing with overseas supplies to non-belligerent countries; though it, of course, is desirable that our powers should be pressed to the utmost in so far as they can be justified in international law. It is not hard, at the same time, however, to understand the growing resentment which all neutral countries feel against the way in which their shipping trade is supervised and obstructed. Sweden is in a difficult position owing to this cutting off of tinplates, being short of material with which to carry on her canning industries (which reacts upon the supplies of foodstuffs for her own people); and it is galling to America to find that markets which now stand wide open to her are inaccessible, though the goods desired are non-contraband. It is undoubtedly the multiplication of instances, of which the above is typical, which has led to the strong Note recently presented by the United States Government to Great Britain, reviewing the whole circumstances under which the latter is acting in respect to overseas trade between America and neutral countries, and the sooner some intelligible line of policy is laid down and the world at large is permitted to know what is and what is not contraband, and, therefore, what may and what may not be shipped from one neutral country to another, the better for all parties concerned. It is highly inexpedient unnecessarily to aggravate sentiment against the Allies in all neutral countries, and some revision of our policy in this respect is eminently desirable. The "gentle art of making enemies" is a poor sort of policy, and it might be abandoned to the mutual advantage of this country and her Allies.

COLONIAL WOOL SALES.

LAST Thursday saw the finish of the seventh series of sales, which lasted nearly a month. The auctions throughout have been very well attended, and at the finish prices are at the highest point. The opening was good, but the end was better. The outstanding feature has been the unprecedented demand for good combing merinos and crossbreds, while even faulty merinos have recovered the 1*d.* per pound they lost during the opening week. The sales have gone better than the most sanguine people expected, particularly in fine wools, and it is remarkable that, notwithstanding a lessened consumption on account of the present recruiting boom among the textile workers, even combing merinos are moving to a still higher point. No doubt the influence of our Allies and America has forced the home trade, and readers will see from the table below the alterations which have taken place compared with the previous auctions. No doubt the current Australian clip is deficiently grown compared with its predecessor, and all authorities are assuming a shrinkage of 450,000 to 500,000 bales. But even that should not make a great deal of difference so far as supplies are concerned, and unless the War speedily terminates, and machinery is released on the Continent, we think there is sufficient wool in sight to satisfy all the requirements of the home trade, America, and our Allies. American and Italian competition has been distinctly felt, the upward tendency of prices, particularly for crossbreds and slipes, being largely due to outside competition. America seems to be buying somewhat speculatively, expecting the War to be over in early spring. While the end is very much to be desired, we rather incline to the view that it is the big military orders which have been placed by Italy and Russia across the Atlantic which are largely account-

able for America buying so freely of both merinos, greasy crossbred fleece, scoureds, and slipes.

We give below a useful table showing the changes compared with the close of the September series:—

Australasian Wool

Greasy merino, superior		12d.
,, ,, average to good		11½d.
,, ,, inferior to average		½d. to 1d.
,, ,, inferior to average		1d. to ½d.
Scoured ,, superior		1½d.
,, ,, average to good		1d. to 1½d.
,, ,, inferior		¼d. to ½d.
,, ,, faulty pieces and locks		Low
Greasy ,, lambs, superior		½d.
,, ,, ,, medium		½d.
,, ,, ,, inferior		Low
,, crossbred, fine superior		½d. to ¾d. higher.
,, ,, ,, ordinary		½d. ,,
,, ,, medium superior		¼d. to ½d. ,,
,, ,, ,, ordinary		½d. ,,
,, ,, coarse superior...		1d. to 1½d. ,,
,, ,, ,, ordinary		½d. ,,
Scoured ,, fine		½d. to ¾d. ,,
,, ,, medium to fine cross		½d. to ¾d. ,,
Slipe crossbred fine lambs		½d. to 1½d. ,,
,, ,, medium ,,		1½d. ,,
,, ,, coarse ,,		½d. ,,
,, ,, faulty classes...		¼d. ,,
Greasy Punta Arenas, well conditioned		1d. to 1½d. ,,
,, ,, ,, wasty		½d. ,,
,, Falkland Islands		½d. ,,

South African Wool.

Snow White, super Westerns ...	Low
,, ,, medium	½d. lower.
,, ,, inferior	½d. ,,
Greasy combing, light	Fully par
,, ,, heavy	¼d. to ½d. lower.
,, clothing, light	Par to ¼d. ,,
,, ,, faulty	¼d. ,,

As far as one can gauge the outlook prices should remain about steady. The home trade, generally speaking, is very well employed, and France, Italy, and other Continental countries are all clamouring for supplies. No doubt there will be no surplus of good long combing merinos, and therefore we expect to see a full maintenance of values for decent wools, both merinos and crossbreds. The next series of sales begins on December 7.

LANCASHIRE COTTON INDUSTRY.

In many ways our staple industry continues to be vitally affected by matters arising as a result of the War. Owing to the levy of recruits for the Army the question of future production in yarn and cloth is of great interest. At the end of last week representatives of the employers had an interview with some of the officials responsible for recruiting, when the position of affairs was discussed. It has now been announced by the Board of Trade that certain grades of cotton operatives will be placed amongst the reserve occupations, and it is understood that such workpeople will only be allowed to enlist on condition that they return to their employment. It is expected that they will be placed in the later groups and not be called up unless absolutely necessary. The Government now seems to be realising the importance of doing everything possible to maintain our great export trades. This decision has given a good deal of satisfaction to employers; but the difficulty in obtaining workpeople is still very pronounced, and a considerable amount of machinery is stopped owing to want of hands. This state of affairs is resulting in some articles being in very limited supply. Compared with a fortnight ago there is not much alteration in raw cotton prices, and ideas have not changed with regard to probable supplies and consumption in raw cotton. Messrs. Neill Bros., of London, estimate the American crop at 12,300,000 bales, including linters.

The amount of practical demand in piece-goods for abroad has recently shown a falling off. Some producers of light fabrics suitable for India have rather more work to go on with, and can afford to present a firmer front to buyers, and further buying is being checked. We seem to be very little nearer trade of importance in shirtings, and such cloths are the worst thing in the market. A few more bids have been mentioned for China, but shippers seem quite unable to obtain adequate offers from their customers abroad, and most of the negotiations have failed to mature. Some of the South American markets continue to give fairly encouraging support. It is not an easy matter to get [illegible] prices for lots of any quantity. The chief obstacle to improvement in trade is undoubtedly the high cost in putting down goods in our outlets abroad, and hesitation on the part of buyers in replenishing stocks on the present basis is not an unreasonable attitude to adopt. There has been some fear of a labour dispute in the printing and dyeing industries, but a settlement has been reached and the notices of the operatives withdrawn. Makers and dealers in cloths suitable for printing and dyeing are hampered at every turn by the scarcity of chemicals, and no relief in this connection seems to be in sight. There continues plenty of activity in home-trade circles. An encouraging demand is being experienced in flannelettes.

In most kinds of American yarns the margin of profit for spinners has been widened during the past fortnight. Demand is now a little quieter, but a considerable business has been done, and many concerns have extended their engagements. Early delivery in certain qualities cannot be obtained, and stocks in first hands are practically non-existent. Managers of mills are greatly harassed by the labour shortage, and all kinds of devices are taking place to get over the difficulty. Further negotiations are taking place with the trade union officials with regard to the relaxation of rules for the time being. In yarns for India, most of the buying has been in dyed descriptions, and sellers have rather improved their position. With regard to the Continent, France has given the best support. Reelers and doublers are very busy, and in many instances deliveries are behind contract time. The improvement in Egyptian yarns has been maintained, and in spite of stocks being about the prices ruling, especially in the finer counts, are more remunerative than for a long time back.

LA GUAIRA AND CARACAS RAILWAY.

The directors of the La Guaira and Caracas Railway Company announce an interim dividend of 2½% in respect of the current year, being at the rate of 5% per annum. This compares with 6% distributed a year ago. The War has undoubtedly had a serious effect upon the trade of Venezuela, Germany being a big customer of the country's produce, and the railway companies are suffering accordingly. Last year, with a falling-off in gross receipts of about £5,000, the profit for dividend was reduced by £4,000 to £36,542, a sum sufficient to maintain the distribution at 8%, with a surplus of £8,500. So far in the current year the traffic receipts of the line have further declined by £20,750, notwithstanding some improvement in the last two months, and even if the present rate of recovery continues the gross receipts for the year will show a substantial diminution compared with 1914. Some saving in expenditure will doubtless be effected, but in any circumstances a cut in the annual rate of dividend seems to be inevitable. It is probable, however, that the Company will be able to pay at least 6%, and possibly 7%, for the year. The price of the Ordinary stock is 70[illegible]

"Railroads: Finance and Organization." By W. Z. Ripley, Ph.D. Price 14s. (London: Longmans, Green and Co.) An interesting survey of the working of United States railroads. Mr. Ripley puts forward two propositions which he thinks might bring about good results. One is that the railroads should be relieved of the steadily increasing burden of State [illegible] of such authority by the Federal Government. The [illegible] even encourage, such co-operation among carriers as will tend to eliminate the economic waste of competition without endangering its manifest advantages to the public at large. This means the repeal or amendment of the anti-pooling section of the Inter-State Commerce Law.

BALTIMORE & OHIO RAILROAD.

EIGHTY-NINTH ANNUAL REPORT—FOR THE YEAR TO JUNE 30, 1915.

Office of The Baltimore and Ohio Railroad Company,
Baltimore, Md., October 27, 1915.

To the Stockholders of
The Baltimore and Ohio Railroad Company.

The President and Directors of the Company submit herewith report of the affairs of the Company for the fiscal year ended June 30, 1915.

Except where otherwise indicated, the comparisons shown herein are with the figures for the preceding fiscal year. The income and capital accounts for the year are stated in accordance with the new Accounting Classifications as prescribed by the Interstate Commerce Commission, effective July 1, 1914, and in order that such comparisons may be properly made the figures for the preceding year have been recast, so far as practicable, and consequently do not agree in detail with the figures published in the last annual report.

MILEAGE AND EQUIPMENT.

The statements in this report show the results of the operation of the lines directly controlled and operated by your Company, embracing:

	First Main Track	Total All Tracks
Miles (owned)	4,458.97	8,803.17
Miles (track & right)	76.30	204.10
Total miles operated	4,535.27	9,007.27

as shown in Table 28 in the full Pamphlet Report.

There has been an increase during the year in total first main-track mileage operated 57.05 miles, which was occasioned by the acquisition of the Moorfield and Virginia Branch, 36.61 miles; the construction of the Magnolia Cut-off, 13.14 miles; the extension of branch lines, 5.34 miles; and certain other adjustments, 1.96 miles.

The equipment of the Company at June 30, 1915, consisted of 2,399 Locomotives; 1,261 Passenger Cars; 86,097 Freight Cars; 3,163 Work Cars; and 144 pieces of Floating Equipment, as shown in detail in Table 27 in the full Pamphlet Report.

RESULTS FROM OPERATION.

The General Income Account of the Company will be found in Table 1 herewith.

The Total Railway Operating Revenues were $91,815,797.34, a decrease of $7,348,212.63, or 7.41 per cent.

The Total Railway Operating Expenses were $63,925,507.74, a decrease of $10,477,880.78, or 14.08 per cent.

The ratio of operating expenses to total revenues was 69.62 per cent., compared with 75.03 per cent. for the previous year.

The Net Revenue from Railway Operations was $27,890,289.60, an increase of $3,129,668.15, or 12.64 per cent.

The Gross Income from the year's operations was sufficient to enable your Company to meet its fixed and other charges, to pay the established 4 per cent. dividend upon the Preferred Stock and 5 per cent. upon the Common Stock, and leave a surplus of $771,475.86.

FREIGHT REVENUES AND STATISTICS.

Freight Revenue was $70,789,808.51, a decrease of $5,617,908.11, or 7.35 per cent., and constituted 77.09 per cent. of Total Railway Operating Revenues, as against 77.04 per cent. last year.

The Interstate Commerce Commission has ordered, effective July 1, 1914, that all statistics with respect to tons and tonnage be adjusted to the basis of 2,000 pounds per ton, without regard to the customary weight of the ton as waybilled. The statistics heretofore published have been on the basis of the weight of the ton as waybilled, and as a large proportion of your Company's tonnage is waybilled at 2,240 pounds to the ton, as prescribed by tariffs, the effect of the recent requirement of the Commission is to materially increase the number of tons as reported. The Traffic Statistics, Table 12 and Table 13-A, for the years 1915 and 1914, are given on the new basis, but in order that comparisons for the ten-year period may be continued, the statistics given in Table 13-B are stated on the basis of the tons as waybilled.

The [illegible] freight carried were 64,575,595, a decrease of 7,891,465 tons, or 10.92 per cent., and the tons carried one mile were 12,970,894,074, a decrease of 1,083,527,427 tons, or 7.71 per cent. As indicating the traffic density of the system, the revenue ton miles per mile of road were 2,860,005 tons, a decrease of 252,534 tons, or 8.11 per cent. The average distance each ton was carried was 201 $\frac{38}{100}$ miles, a gain of 7 $\frac{18}{100}$ miles over the previous year. Freight revenue per mile of road was $15,605.75, a decrease of $1,312.77, or 7.76 per cent., and the revenue per freight train mile was $0.77 $\frac{6}{10}$, an increase of 2 $\frac{6}{10}$ cents, or 7.69 per cent. The average earnings per ton per mile were 5 $\frac{46}{100}$ mills, an increase of $\frac{16}{100}$ mills. The increase in the average rate per ton per mile and in the average distance each ton was carried is mainly due to a larger proportion of the coal shipments being shipped to the ports of Baltimore and New York. Freight Traffic Statistics are given in Tables 12 and 13 in the full Pamphlet Report.

The Statement of Commodities Carried, Table 14 in the full Pamphlet Report, shows a substantial increase in the grouping of Products of Agriculture of 668,164 tons, or 18.97 per cent. There was, however, a very large decrease in the items comprised in the grouping of Products of Mines, amounting to 7,520,045 tons, or 15.42 per cent. under the previous year. The decrease in Products of Mines and of Manufactures reflects the depression in the steel trade and allied industries throughout the greater part of the year.

PASSENGER REVENUES AND STATISTICS.

Passenger Revenue amounted to $14,059,940.41, a decrease of $1,830,050.54, or 11.52 per cent. These earnings constitute 15.31 per cent. of the total earnings, compared with 16.02 per cent. for last year.

The number of passengers carried was 20,581,992, a decrease of 2,166,078, or 9.52 per cent.; the number of passengers carried one mile was 714,368,423, a decrease of 112,910,193, or 13.65 per cent., and the average distance each passenger was carried was 34.71 miles, a decrease of 1 $\frac{66}{100}$ miles. Of the decrease in passenger earnings, approximately $800,000.00 was due to the cessation of immigrant business occasioned by the disturbed conditions in Europe, and the remaining portion of the decrease reflects the general depression in business. The average rate per passenger per mile for the year was .01 $\frac{[illegible]}{100}$ cents, an increase over the previous year of $\frac{47}{100}$ cents, due in part to the withdrawal of special rate features and the increase in certain fares. The average earnings from each passenger decreased .01 $\frac{4}{100}$ cents. These and other statistics relating to Passenger Traffic will be found in Tables 10 and 11 in the full Pamphlet Report.

MISCELLANEOUS REVENUES.

Mail Revenue was $1,236,076.68, an increase of $21,733.61 over the preceding year.

Express Revenue was $1,818,452.68, a decrease of $31,761.15. That this decrease was not greater, in a year of general depression, is due largely to the earnest co-operation and great activity displayed by the Wells, Fargo Express Company in building up this branch of the service.

Other Transportation Revenue, in which is included earnings from Switching and Special Train Service, Transportation of Milk, Excess Baggage, Water Transfers, &c., shows a net decrease of $44,338.20, mainly from Excess Baggage charges and Water Transfers.

Revenue from Sources other than Transportation, in which is included earnings from Dining Cars, Station Privileges, Storage, Grain Elevators, Joint Facilities, &c., shows a net increase of $154,111.76, principally occasioned by the increase in earnings from Elevators, due to the larger movement of grain.

OPERATING EXPENSES.

The total Operating Expenses for the year were $63,925,507.74, compared with $74,403,388.52 for last year, a decrease of $10,477,880.78, or 14.08 per cent.

The total Maintenance of Way and Structures expenses were $8,985,626.86, a decrease of $3,432,808.11, or 27.64 per cent. It should be noted in this connection that maintenance of way expenses for the previous year included a charge of $2,112,084.98 directly attributable to the disastrous floods of March 1913, which had no counterpart in the operations of the present fiscal year. These expenses include $556,452.15, covering replacement and revision of facilities incident to additions and betterments. The roadway and structures have been properly maintained.

The total Maintenance of Equipment expenses were $16,002,588.53, a decrease of $1,147,186.68, or 6.69 per cent. Included in these expenses is a charge for depreciation of equipment amounting to $2,810,415.80. The policy adopted some years ago of rebuilding and improving the equipment so as to better fit it for present service requirements has been continued, and 7,564 freight cars have been substantially rebuilt during the year.

The total of all Maintenance Expenses for the year was $24,988,215.39, and compared with the same expenses for the preceding year shows a decrease of $4,579,994.79, or 15.49 per cent. These expenses for the year represent 27.22 per cent. of Total Operating Revenues, as compared with 29.82 per cent. the preceding year.

The total Transportation expenses for the year were $34,254,572.05, and compared with last year, $39,985,496.44 show a decrease of $5,730,924.39, or 14.33 per cent. These expenses were 37.31 per cent. of Total Operating Revenues,

as compared with 40.32 per cent the preceding year. Co incident with the decrease in transportation costs and directly contributing thereto was the heavier freight-train load, which was 692.55 tons this year, against 645.37 tons for the previous year, an increase of 46.98 tons, or 7.28 per cent. There was a decrease in revenue freight train miles of 3,042,622 miles, or 13.97 per cent., notwithstanding the revenue freight handled one mile decreased but 7.71 per cent.

The Traffic Expenses decreased $247,329.82, or 11.49 per cent., due mainly to less expenditure for outside agencies and for printing tariffs, &c.

The Interstate Commerce Commission Classification of Outside Operations was abolished, effective July 1, 1914. The greater portion of the expenses formerly charged to those accounts are now charged direct to other accounts; a minor portion, however, is still segregated and included in Miscellaneous Operations, and the fluctuations therein for the year were immaterial.

The General Expenses increased $92,664.23, due prinpally to increased expense of the Relief Department on account of increase in pension payments and to the difference in method of charging appropriations made to that Department.

The credit item of Transportation for Investment is a new requirement of the Interstate Commerce Commission. The amount included therein represents the reasonable cost of transporting men and material for construction work and is charged to the cost of such work.

TAXES.

Railway Tax Accruals amounted to $3,289,611.04, and taxes charged to Miscellaneous Tax Accruals amounted to $213,463.32, or a total of all taxes for the year of $3,503,074.36, an increase of $59,926.33. Taxes for the year were 3.82 per cent. of Total Operating Revenues.

INCOME ACCOUNT.

Non-operating Income, in which is included Rentals from Property and Equipment, Dividends and Interest on Securities Owned, &c., decreased $872,569.82, due to the exclusion from the income of the year of any interest accruing on obligations of the Cincinnati, Hamilton and Dayton Railway Company now held by your Company.

Deductions from Gross Income, in which is included Rentals paid for the use of Equipment and Property, Interest on Funded and Unfunded Debt, &c., increased $654,529.68, occasioned by increase in certain rentals paid and larger interest charges incident to increased capital obligations.

The Net Income for the year amounted to $10,780,881.33, an increase of $1,530,856.95 over the preceding year, out of which dividends at the rate of 4 per cent. per annum were paid on the Preferred Stock of the Company, amounting to $2,354,521.28. After deducting this amount and required appropriations for Sinking and other Reserve Funds, the balance transferred to Profit and Loss was $8,368,727.07.

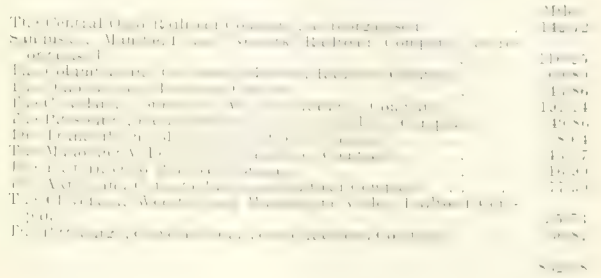
PROFIT AND LOSS.

The amount to the credit of Profit and Loss at the beginning of the fiscal year was $32,804,187.74, which amount was increased to $41,172,914.81 by the addition of the surplus income earned during the year as shown above. Dividends at the rate of 5 per cent. per annum, amounting to $7,597,253.21, were declared on the Common Stock of the Company and charged to Profit and Loss, and there was also charged to this account during the year the net amount of $1,000,147.69, included in which is $897,970.95 for discount and expenses on securities sold during the same period. The balance to the credit of Profit and Loss, which represents the excess book value of assets over liabilities, at the close of the year is $32,575,513.91.

THE FIVE PER CENT. RATE CASE.

Because of the steady and constant increase in the costs of operation due to matters of a continuing character, such as wage increases, legislative requirements, and the necessity of maintaining higher standards in maintenance and operation, there had been a marked decline in the rate of return in net operating income upon the property investment of the railroads generally during the past several years. Owing to the inadequacy, under these conditions, of the then existing rates, your Company joined with other railroads serving Official Classification Territory in proceedings before the Interstate Commerce Commission, seeking to secure approval of a uniform advance in freight rates of 5 per cent.

Following the original and supplemental petitions of the railroads in the matter, and after hearings and investigations extending over more than a year, the Interstate Commerce Commission, in December 1914, approved an advance in the freight rates in the so-called Official Classification Territory, which includes the territory served by your Company, of approximately 5 per cent., except on certain commodities, such as bituminous and anthracite coal, coke, iron ore, &c., and on traffic moving *via* lake and rail, which exceptions apply to about one-half of the freight traffic of your Company. The Commission also approved of advances in certain passenger rates and some other miscellaneous charges. The revised rates on Interstate traffic became effective generally on March 15th, but the application of authority to adjust Intrastate rates is still pending in some of the States, therefore the full effect on your Company's revenues cannot now be determined.



In that part of the decision devoted to their findings as to the adequacy of present revenues the Commission, among other things, stated

"In view of a tendency towards a diminishing net operating income as shown by the facts described, we are of opinion that the net operating income of the railroads in Official Classification Territory, taken as a whole, is smaller than is demanded in the interest of both the general public and the railroads; and it is our duty and our purpose to aid, so far as we legally may, in the solution of the problem as to the course that the carriers may pursue to meet the situation."

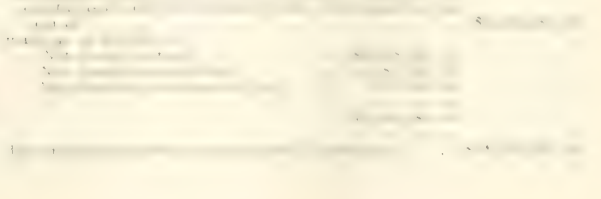
While granting approximately only one-half of the immediate relief asked for by the railroads, it should be encouraging to those interested in railroads and in the proper industrial development of this country to know that the Commission treated the question before it in a broad way, and recognised, unanimously, the necessities of the carriers for additional revenues, and declared its purpose to aid, so far as it legally may, in the solution of the problem as to the course that the carriers may pursue to meet the situation. It is believed that the inquiry has also served to bring about a much better understanding of the railroad situation by all interested or concerned in that question, and that because of this clearer understanding the shippers, the railroads, and the regulatory agencies of the public will all in the future be better able to satisfactorily work out the many problems incident to the Governmental regulation of the public utilities.

CHANGES IN CORPORATE RELATIONS.

Continuing the programme begun in 1912 for the purpose of simplifying the title to properties underlying the several System mortgages and of reducing the number of corporate entities comprising the System, thereby affording a more comprehensive basis for future financing, The Baltimore and Ohio Railroad Company during the year acquired the fee title to the properties of the following corporations owning railroads in the State of Ohio, the operations of which properties are included in the System as heretofore, viz. :—

The fee of that portion of The Pittsburgh, Cleveland and Toledo Railroad Company lying wholly within the State of Pennsylvania, 9.85 miles, was acquired by The Pittsburgh and Western Railroad Company, the entire capital stock of the latter being owned by your Company.

The Baltimore and Ohio Railroad Company also acquired the fee title to the property formerly owned by the Moorefield and Virginia Railroad Company, 36.61 miles, which had heretofore been operated separately, but was included in the operations of the System for the fiscal year.



The purchase price of these properties represented the investment of your Company in the securities of, and capital advances to, the corporations mentioned above at the time of acquisition. The total amount of your investment has not been changed by reason of such purchases, the effect being merely to alter the form of the investment and to simplify the accounts on the general books of the Company.

The purchase of these properties, except in the case of the Moorefield and Virginia Railroad Company, did not increase or change the miles of road of the System, but did, however, increase the miles of road owned in fee by The Baltimore and Ohio Railroad Company to the extent of 868.69 miles. The length of road now owned in fee is 2,168.75 miles, or 49.13 per cent. of the mileage comprising the System.

GENERAL BALANCE SHEET.

The General Balance Sheet, stated generally in the form now prescribed by the Interstate Commerce Commission, is shown in Table 2 herewith, and the principal differences in the assets and liabilities of the Company, as compared with the previous year, are as follows :—

ASSETS.

Of this decrease, $17,751,244.53 is in Cash, and is due to the inclusion last year of $20,000,000.00 in this item to pay a like amount of One Year Secured Notes which matured and were paid July 1, 1914. There was a decrease in Special Deposits of $1,900,947.53, due to payments for additional equipment acquired for the Equipment Trust of 1913, and a decrease in Material and Supplies of $1,935,412.98. The increases in groupings of Deferred Assets and Unadjusted Debits are normal fluctuations incident to the business.

LIABILITIES.

There were no additional issues of Capital Stock during the year.

The grouping of Long-Term Debt, i.e., Funded Debt, shows an increase of		$3,991,833 54
accounted for as follows:		
Obligations issued during the year —		
Four and one half per cent. Secured Gold Notes —		
Ser. "A," maturing June 1, '17...	$20,000,000 00	
Ser. "B," maturing June 1, '18...	20,000,000 00	$40,000,000 00
Issued to retire $35,000,000 One-Year Notes, matured June 1, 1915, and for other corporate purposes.		
First Mortgage Bonds	1,000,000 00	
Issued under provision of the mortgage in recoupment of construction expenditures.		
Hampshire Southern RR. Co. (Moorefield & Virginia RR. Co.) First Mortgage Bonds, assumed	5,000 00	
	$41,005,000 00	
Obligations retired during the year —		
Baltimore & Ohio Equipment Trust of 1912	$1,000,000 00	
Series "C," paid at maturity.		
Baltimore & Ohio Equipment Trust of 1913	1,000,000 00	
Series "B," paid at maturity		
Baltimore & Ohio RR. Co., Loan No. 6 of 1853	6,000 00	
Purchased and retired.		
Real Estate Mortgages and Ground Liens, Liquidated	7,166 66	
Baltimore & Ohio RR. Co., One Year Secured Notes	35,000,000 00	37,013,166 66
Paid at maturity, June 1, 1915.		
Net Increase		$3,991,833 34
Current Liabilities show a decrease of		$21,484,875 57

due principally to the payment at maturity, July 1, 1914, of $20,000,000.00 of One-Year Secured Notes, the balance of the decrease being in the accounts Interest Matured Unpaid, Unmatured Dividends Unpaid, &c.

Deferred Liabilities decreased $470,620.68, resulting from the operations of the Relief Department and smaller aggregate amounts withheld from contractors' estimates. Unadjusted Credits increased $1,407,635.80, the major portion of which represents the net increase in Accrued Depreciation on Equipment.

Incident to the acquisition of the fee of certain properties in Ohio, there was restored to the Investment Account of Road $2,793,197.90 of capital expenditures for additions and betterments, which had heretofore been charged to Income or Surplus, and this change accounts for the increase in the item Additions to Property through Income and Surplus.

EQUIPMENT TRUSTS.

The status of the Equipment Trusts at June 30, 1915, follows:		
Baltimore & Ohio Equipment Trust of February 1912		
Total outstanding June 30, 1914	$8,000,000 00	
Matured and paid during the year —		
Series "C"—Paid July 1, 1915	1,000,000 00	
Outstanding June 30, 1915		$7,000,000 00
Baltimore & Ohio Equipment Trust of 1913:		
Total outstanding June 30, 1914	$9,000,000 00	
Matured and paid during the year —		
Series "B"—Paid April 1, 1915	1,000,000 00	
Outstanding June 30, 1915		$8,000,000 00
Total Equipment Trust Obligations outstanding June 30, 1915		$15,000,000 00

Each of these Trusts was issued in ten series of $1,000,000.00, one series of each Trust maturing annually.

ADDITIONS TO ROAD AND EQUIPMENT.

The total expenditures charged to Road Account were $3,744,946.32. These charges are shown in Table 6 in the full Pamphlet Report, where they are grouped under the more important accounts of the Road and Equipment Classification.

The total capital expenditures for equipment during the year aggregated $4,231,882.19, as shown below. Table 27 in the full Pamphlet Report shows the equipment in service and the various changes occurring therein during the year.

ROAD.

The work of constructing the roadway for new double track line and relocation of parts of the old line between Okonoko and Orleans Road, W. Va., known as the Magnolia Cut-off improvement, has been completed. One track has been laid and was put in operation December 6, 1914. The laying of the second track has been held in abeyance. With the use of this improvement it has been possible to increase the eastbound slow freight-train load to 6,180 gross tons, an increase of 36.36 per cent. The operations in this territory have been greatly facilitated by this improvement, the distance has been shortened 5.78 miles and the helper station at Hansrote has been eliminated, which latter constituted a serious interference with the movement of traffic by reason of eastbound trains requiring assistance over a section of the road where traffic is of the greatest density. While the new line has been opened but a little more than six months, substantial economies in transportation costs have already been effected and the movement of traffic much facilitated. With the handling of a greater volume of business the benefits derived will be proportionately larger. This improvement, together with others heretofore made, gives a continuous three-track line between Patterson Creek and Cherry Run, W. Va., a distance of 57 miles, which section has the greatest traffic density of the System, at times in excess of 24,000,000 ton miles per mile of road per annum.

No new construction work of any magnitude is now under way, but miscellaneous expenditures, as shown in detail in Table 6 in the full Pamphlet Report, were made during the year for the betterment and improvement of the property. Some of the more important items were as follows :—

An electric transformer station, to enable the utilisation of purchased power, was erected at Camden Station, Baltimore, Md.

A new passenger station was constructed at Berkeley Springs, W. Va., and a new combination station and office building was completed at Strasburg Junction, Va.

During the year three new interlocking plants were built, and four were reconstructed and rearranged.

Automatic signals were installed over seven miles of double track, and 10.6 miles of westbound track between Orleans Road and Magnolia, W. Va. Controlled manual block signals were provided for 14.7 miles of single track, and a large number of safety devices were installed for the protection of switches, grade crossings, &c.

The alignment near 75th Street, Chicago, Ill., was corrected, eliminating 194 degrees of curvature, making it possible to operate the heaviest power on this part of the line and dispensing with a slow order over six miles of road.

The work of eliminating the grade crossing of Concord Pike, near Concord, Del., was completed, as was also the Washington Road crossing at Elkridge, Md.

The Ludlow Avenue Viaduct, Cincinnati, Ohio, which was opened for traffic on June 15, 1914, has now been entirely completed, and substantial progress has also been made in constructing the Hopple Street Viaduct in the same city.

The undergrade crossing at 28th Street, Lorain, Ohio, was completed.

Important bridges were constructed during the year over the Monongahela River at Wheeling Junction, Pa., over Central Avenue, Madisonville, Ohio, and over the Potomac River at Magnolia and Kessler, W. Va., the latter two being incident to the Magnolia Cut-off.

To permit the operation of heavier locomotives the bridges between Akron Junction and Cleveland, Ohio, have been rebuilt or strengthened so as to carry engines weighing over 320,000 lb.

EQUIPMENT.

		$
Total Book Value of Equipment, June 30, 1914, was		107,756,946 72
During the year the following additions to the equipment were made:		
34 locomotives, 6 passenger cars, 1,781 freight cars, and 9 work cars, and payments were made on account of	$2,749,194 06	
And 5 passenger cars, 7,564 freight cars, and 1 work car were reconstructed, involving a net charge to the equipment account of	1,482,688 13	4,231,882 19
		111,987,928 91
During the year the following equipment was put out of service and credited to Investment in Equipment: 7 passenger cars, 3,603 freight cars, 419 work cars, 1 car float, and 1 lighter, having a book value of		2,149,791 50
Making the Gross Book Value of Equipment		109,838,137 41
From this should be deducted:		
Accrued Depreciation on Equipment in Service, as follows:		
Amount at credit, June 30, 1914	$15,025,071 35	
Amount charged to Income for depreciation, 1915	3,810,415 80	
	$18,835,487 15	
Depreciation accrued on equipment put out of service during the year	1,705,733 07	
Balance to Credit of Accrued Depreciation of Equipment in Service, June 30, 1915		17,129,754 08
Leaving the Value of Equipment June 30, 1915		92,708,383 33

In continuation of the policy inaugurated several years ago of strengthening certain classes of equipment, during the year 7,564 freight cars were rebuilt with steel underframes and bolsters and equipped with heavy draft gear to better fit them for present operating requirements.

At the end of the year 203 locomotives that had undergone thorough repairs were in storage awaiting traffic development.

The percentage of steel freight cars, including cars with steel underframes and steel centre sills, to the total revenue freight equipment at June 30, 1915, was 81.38 per cent., as compared with 72.77 per cent. last year and 38.83 per cent. at June 30, 1909.

Of the new equipment acquired during the year, 31 Locomotives and 1,195 Steel Freight Cars were purchased under

the provisions of The Baltimore and Ohio Equipment Trust of 1913.

Contracts have been entered into for the purchase of 50 steel passenger cars and 2,000 all-steel freight cars, to be delivered during the coming fiscal year.

RELIEF DEPARTMENT.

The Railroad Company assumes general charge of the Relief Department; furnishes office room and furniture, gives the services of its officers and employees and the use of its facilities; becomes the custodian of its funds with full responsibility therefor, and guarantees the true and faithful performance of the obligations of the Department.

RELIEF FEATURE.

The total number of members of this Feature is 50,591. The total payments for all benefits since the inauguration of this Feature, May 1, 1880, to June 30, 1915, amount to $20,096,882.93. A statement of the operations of this Feature, which provides accident, sick, and death benefits for employees, is shown on the first page of Table 26 in the full Pamphlet Report.

SAVINGS FEATURE.

This Feature combines the advantages of a savings and loan association, through which employees and their immediate dependants may invest their accumulated savings, and from which they may obtain funds for the purchase of homes, to be repaid through easy monthly instalments. As an incentive to employees to save, the Railroad Company guarantees 4 per cent. interest on all such deposits. During the past year this Feature paid to depositors $416,295.91, being 5 per cent. on deposits, after which there was a balance of $48,178.18 carried to the Surplus Account. On June 30, 1915, there were 8,937 depositors, with total deposits of $8,787,816.22, an average of $982.21. During the year 1,394 new loans were made and 541 loans were paid off, leaving in force and effect at June 30, 1915, a total of 6,114 loans, amounting to $5,536,842.22. Since the inauguration of this Feature, August 1, 1882, loans to the aggregate amount of $16,326,128.72 have been made, assisting employees in acquiring real estate to this extent. A statement of the operations of this Feature will be found in Table 26, pages 39-40, of the full Pamphlet Report.

PENSION FEATURE.

Pension payments to superannuated and infirm employees constitute a special pay-roll and are charged to Operating Expenses, the total amount so charged during the year being $287,835.99.

During the year 200 names were added to the pension roll and 87 were removed by reason of death, leaving 1,036 as the total number of pensioners on June 30, 1915. The average age of pensioners at June 30, 1915, was over seventy years.

A report of the operations of the Department will be distributed to members.

INDUSTRIAL DEPARTMENT.

One hundred and thirty-eight new industries, manufacturing and commercial, were located on or immediately adjacent to the line during the year, from which the Company expects to derive substantial freight revenues. One hundred and thirteen side tracks were constructed, eighty-seven to newly located industries, and twenty-six to industries previously located, but without side track facilities.

INSURANCE FUND.

A summary of the operations of this Feature for the year ended June 30, 1915, and a statement of the assets and liabilities, are shown in Table 25 in the full Pamphlet Report. The surplus in this Reserve Fund at June 30, 1915, was $1,503,680.30.

SUBSIDIARY LINES.

The Income Accounts of the following lines, owned by The Baltimore and Ohio Railroad Company, but operated separately and not included in the Income Account of that Company, are shown in the following Exhibits, viz. :—

		Miles.
"A."	The Staten Island Railway Company	12·65
"B."	The Staten Island Rapid Transit Railway Company	10·89
"C."	The Sandy Valley and Elkhorn Railway Company ...	30·57
"D."	The Baltimore and Ohio Chicago Terminal Railroad Company...	79·42
		133·53

THE CINCINNATI, HAMILTON AND DAYTON RAILWAY COMPANY.

This property is still in the hands of Receivers, and while plans for its reorganisation are now being considered, the subject has not progressed sufficiently to justify any conclusion at this time as to the ultimate effect of the reorganisation upon your Company; consequently, there is nothing to add to the full statement made in this connection in the previous annual report, except that your Company has made no further advances to or on account of the Cincinnati Company, other than to pay the interest accruing during the year on the $7,500,000 00 First and Refunding Mortgage 4 Bonds outstanding and bearing the guarantee of your Company.

As previously noted, there was excluded from the income account of the Baltimore and Ohio Railroad Company for the year all interest accruing on obligations of the Cincinnati Company now held by your Company, aggregating $22,695,144, so that the full weight of any income losses from this source has been met. The capital losses cannot yet be determined and adjusted.

* * *

The President and directors renew their acknowledgment of the loyal and efficient services of the officers and employees during the past year.

By order of the Board.
DANIEL WILLARD
President.

TABLE 1.—GENERAL INCOME ACCOUNT, YEAR ENDED JUNE 30, 1915, IN COMPARISON WITH YEAR ENDED JUNE 30, 1914.

THE BALTIMORE AND OHIO RAILROAD SYSTEM.

The following securities bear the endorsement of The Baltimore & Ohio RR. Co.; Cincinnati, Hamilton & Dayton Ry. Co., 1st and Refunding Mortgage Bonds (outstanding in hands of public), $7,500,000. The following securities bear the endorsement of The Baltimore & Ohio RR. Co. jointly with other companies, viz.: Akron Union Passenger Depot Co., 1st Mortgage Bonds, $70,000; Kentucky & Indiana Terminal RR. Co., 1st Mortgage Sterling Bonds, $6,282,780.60; Richmond-Washington Company, 1st Mortgage Bonds, $10,000,000; Washington Terminal Company, 1st Mortgage Bonds, $12,000,000.

The above General Balance Sheet presents an accurate statement of the accounts of the Company as of June 30, 1915.

J. T. LEARY, *Comptroller.*

ALLIANCE ASSURANCE CO.—Interim dividend at the rate of 5*s.* per share, less tax.

ASSAM CO.—Interim dividend of 7½%, or £1 10*s.* per share, less tax.

BANK OF MAURITIUS.—The branch of the Bank at Mahe, Seychelles, will be closed on and after January 31, 1916.

BIDOR RUBBER ESTATE.—Interim dividend of 15%.

BORAX CONSOLIDATED.—Interim dividend of 6*d.* per share, less tax, on Deferred Ordinary.

BRITISH AND CHINESE CORPORATION.—Dividend of 5%, tax free, for year.

BRITISH COTTON AND WOOL DYERS' ASSOCIATION.—The profits of this Association for the half-year, including income from investments, &c., after deducting £1,276 for specific depreciation and £17,987 for repairs and renewals during that period, have amounted to £91,181. From this there falls to be deducted on account of administration and other expenses £10,883. Debenture and other interest calls for £15,328, in addition to which a sum of £12,500 is transferred to depreciation fund, bringing that fund up to £166,516. There then remains a credit balance on profit and loss account of £52,469, which, with a sum of £32,458 brought in from last year, enables the Company to carry forward a sum of £84,928. During the half-year the branches as a whole have been well employed and continue so. The dyeware situation, however, is stated to be an increasingly difficult one, and unfortunately there appears little probability of improvement.

BUTTONS.—Interim dividend of 1*s.* per share, tax free.

CASTNER-KELLNER ALKALI CO.—Final dividend at rate of 24% per annum for the six months ended September 30, 1015.

CICELY RUBBER ESTATES.—Interim dividend of 40% on Ordinary shares and 42½% on the Preference shares.

COATS, J. AND P.—Usual half-yearly dividend of 3%, less income tax, on Preference shares, also the quarterly dividend of 5%, less tax, on Preferred Ordinary stock, and the quarterly dividend of 1*s.* 6*d.* per share, less tax, on Ordinary.

COMMONWEALTH BANK OF AUSTRALIA.—A branch of this Bank has been opened at Broadmeadows, Victoria.

FINE COTTON SPINNERS' AND DOUBLERS' ASSOCIATION.—Interim dividends on the Preference and the Preferred Ordinary shares, and also an interim dividend of 3% on the Ordinary shares, being at the rate of 6% per annum.

HORNSBY, RICHARD, AND SONS.—Dividend on Ordinary shares at the rate of 6½% per annum, less tax.

ILFORD.—Dividend of 5% on the Ordinary shares.

INSULINDE (SUMATRA) RUBBER.—*Dividend* of 10%, less tax, for the year ended June.

JOKAI (ASSAM) TEA CO.—Interim dividend of 3%, less tax, on Ordinary.

LYONS, J., AND CO., LTD.—Interim dividend for the half-year at the rate of 20% per annum in Ordinary shares.

LONDON AND CHICAGO CONTRACT CORPORATION.—Dividend of 4% for the year.

MALACCA RUBBER PLANTATIONS.—An interim dividend of 10% for the year, tax free, on Preference and Ordinary.

ANALYSIS

OF THE SECURITY FOR THE BONDS DEALT WITH UNDER THE

MISSOURI PACIFIC PLAN OF READJUSTMENT

DATED JULY 1, 1915

AND OF THE PROVISION MADE FOR THEM THEREUNDER.

PROPOSED NEW SECURITIES.

The Plan contemplates that a new corporation (hereinafter called the New Company) shall acquire all the properties now owned by the Missouri Pacific and Iron Mountain Companies (so far as they may be embraced in the reorganisation), and shall issue, in consummating the Plan, the following classes of securities:

(*a*) $46,925,150 *new First and Refunding Mortgage 5 Bonds:*

These bonds are to mature about 1965 and to be of a series redeemable as a whole at 107½ and interest after 1920. The Plan contemplates that upon the completion of the proposed readjustment the mortgage shall be a lien (so far as practicable a direct lien) upon the entire System, including the Iron Mountain Lines (the aggregate of the prior liens averaging only about $18,328 per mile on the entire mileage mortgaged), and *that it shall be a first lien on about 3,650 miles of the System.* The mortgage is also to be a lien upon all property thereafter acquired by the use of bonds secured thereby. Bonds are reserved for future requirements. If the revenues of the last two fiscal years are taken as a basis, the property would show, over and above prior charges, earnings of about $6,500,000, equal to nearly three times the interest upon these bonds. .

(*b*) $44,399,292 *new General Mortgage 4 Bonds*

These bonds are to mature about 1975 and to be of a series redeemable as a whole at par and interest after 1920. The mortgage is to be a lien upon all property at any time covered by the new First and Refunding Mortgage, subject only to the lien of that mortgage and the liens prior thereto, and is also to be a lien upon all property thereafter acquired by use of the General Mortgage Bonds. Bonds are reserved for future requirements. If the revenues of the last two fiscal years are taken as a basis, the property would show, over and above prior charges, earnings of about $4,150,000, equal to nearly two and one-half times the interest upon these bonds.

(*c*) $76,751,635 *new Convertible 5% Preferred Stock:*

This stock is to be preferred as to assets and earnings (the dividends to be cumulative from June 30, 1918), and is to have full voting power and to be convertible at par into Common Stock of the New Company at the option of the holder, subject to an adjustment of dividends. The entire issue of Preferred Stock is to be redeemable at 107½ with certain accrued dividends. If the revenues of the last two fiscal years are taken as a basis, the property would show, over and above prior charges, earnings of about $2,370,000 or over 3% on the Preferred Stock to be issued under the Plan. Provision is made in the Plan for the possible substitution for Preferred Stock of Convertible 5% Income Bonds.

(*d*) $82,839,585 *new Common Stock*

Assessment for Cash Requirements.

The burden of raising the necessary new cash capital of about $41,000,000 required by the Plan has naturally been placed upon the stockholders, who will receive for their old stock an equal amount of new Common Stock, conditioned upon their paying an assessment of $50 per share, for which they are to receive an equal face amount of new General Mortgage 4% Bonds. After taking into account the value of these bonds according to recent market quotations for them as and when issued, the net burden of the cash assessment upon the stockholders would amount to from $17.50 to $20 per share. In fixing the terms of an assessment upon stockholders, it must be borne in mind that if those terms are unduly drastic, neither will the stockholders pay nor can the assessment be underwritten, in which case there would be no alternative but to place the burden of raising the necessary cash upon bondholders.

ANALYSIS OF THE SECURITY FOR THE EXISTING BONDS DEALT WITH BY THE PLAN AND OF THE REASONS FOR THE TREATMENT ACCORDED THEM.

$24,845,000 *Missouri Pacific Extended 6 Secured Gold Notes:*

These notes being secured by $25,000,000 principal amount of Iron Mountain First and Refunding Mortgage 6% Bonds, in addition to considerable other collateral of substantial value and in part indispensable to the Missouri Pacific System, the Plan provides for their payment in cash. The following is a statement of the collateral for these Notes:

Face or Par Value	
$25,000,000	Iron Mountain [illegible] Mortgage 6% [illegible]
[illegible]	Iron Mountain [illegible]
1,397,000	Missouri [illegible] Pacific Mortgage [illegible]
525,000	[illegible]
100,000	[illegible] Mortgage 5% [illegible]
[illegible]	[illegible]
[illegible]	Pueblo Stock Yards Company Stock
[illegible]	[illegible] Common Stock
9,500,000.00	[illegible]
[illegible]	[illegible]

$3,861,000 *Equipment Obligations Maturing June 30 1918:*

The equities in the equipment securing these obligations compel provision for their payment in cash.

$14,904,000 *Missouri Pacific Consolidated First Mortgage 6% Bonds Due 1920:*

These bonds are secured by a fourth mortgage on the main line from St. Louis to Kansas City, and by mortgage (chiefly a first mortgage) on the line from Kansas City to Atchison, and from Atchison to a point near Omaha, the line from Jefferson City via Boonville to Kansas City, and certain branches. The Plan offers to these bonds 110% in new First and Refunding 5s, thus giving them a 10 per cent increase in principal, coupled with a security of a system mortgage covering a large mileage with diversified traffics, which is believed to afford a greater measure of safety than the existing security.

$14,375,000 *Missouri Pacific Trust 5% Bonds Due 1917:*

These bonds are secured not by direct mortgage but by pledge of the following seven smaller bond issues of various maturities secured by separate first mortgages on seven sections of the System in Kansas and Colorado:—

	Maturity	Miles Mortgaged	Principal Amount
Bonds Secured in part upon Main Line:			
Pueblo & State Line	1917	152.12	[illegible]
Denver, Memphis & Atlantic	1916	[illegible]	[illegible]
Kansas & Colorado	1926	[illegible]	2,041,000
		[illegible]	$10,872,000
Bonds Secured upon Branches:			
Fort Scott, Wichita & Western, 7's	1917	[illegible]	$[illegible]
Wichita & Colorado, 6's	1917	[illegible]	[illegible]
Salina, Sterling & El Paso, 6's	1926	[illegible]	[illegible]
Kansas [illegible]	[illegible]	[illegible]	[illegible]
		[illegible]	$[illegible]
Total [illegible]		1,113.78	$[illegible]

Enforcement by the Trust 5's of 1917 of their lien upon the pledged bonds, resulting in their obtaining possession of the pledged bonds, will not give them possession of the railroads mortgaged except such portions as may be covered by mortgages securing pledged bonds upon which defaults shall have been made and continued. Even portions of the main line indirectly covered might be omitted from the System of the New Company and its traffic cared for by other means; or the New Company might, by paying part of the pledged bonds of earlier maturities and paying interest on additional pledged bonds of later maturities and the principal when due, acquire the greater part of the mileage covered indirectly by this issue, *including all portions of the main line so covered*, leaving the Trust 5's to realise a large deficiency from pledged bonds in default secured on branches not taken over by the New Company. There would probably be deductions for expenses of collection of the deficiency, and assessments upon the Trust 5's would doubtless be necessary for development of the branches not taken over by the New Company. Considering these conditions, it is believed that the intrinsic value of the Trust 5's, as well as the measure of importance and value to the System of the properties comprised in their security, is [illegible] by the offer of 100% in new First and Refunding 5s. Bonds secured by a system mortgage covering a large mileage with diversified traffic, which is believed to afford a greater measure of safety than the existing collateral.

$9,636,000 *Missouri Pacific [illegible] Mortgage 5% Bonds Due 1920:*

These bonds, like the Trust 5's of 1917, are secured not by direct mortgage but by pledge of smaller bond issues. There are 19 of these issues, of various maturities, secured by separate first mortgages on 19 sections of the System in Kansas, Nebraska, Missouri, and Tennessee. They are as follows:

	Maturities	Miles Mortgaged	Principal Amounts
Bonds Secured upon Main Lines.			
Kansas City & S.-W. of Missouri, 6's ...	1926	20.70	[illegible]
[illegible]	[illegible]	[illegible]	1,110,000
[illegible]	[illegible]	[illegible]	1,273,000
[illegible]	[illegible]	[illegible]	300,000
[illegible]	1947	27.30	117,000
		[illegible]	$4,057,000
[illegible]			
St. Louis, Oak Hill & Carondelet, 6's...	1917	[illegible]	[illegible]
Iron Mountain of Memphis, 6's ...	1919	1.09	[illegible]
[illegible] ...	1920	26.27	394,000
Fort Scott, Belt Terminal, 5's ...	[illegible]	[illegible]	195,000
[illegible]	1920	53.07	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
Nebraska Southern, 5ss	1922	16.12	242,000
[illegible] ...	1916	131.00	[illegible]
[illegible] ...	1927	24.97	376,000
[illegible] ...	1920	73.00	[illegible]
Interstate Railway, 6's	1920	101.43	1,622,000
Joplin & Western, 5's ...	1922	4.50	69,000
[illegible]	1923	18.25	275,000
		[illegible]	$7,988,000
[illegible]		[illegible]	[illegible]

Even portions of the main line indirectly covered might be omitted from the System of the New Company and its traffic obtained by other means; or the New Company might by paying part of the pledged bonds of earlier maturities and paying interest on additional pledged bonds of later maturities and the principal when due, acquire about one-half of the mileage covered indirectly by this issue, *including all portions of the principal so covered*, leaving the Collateral 5's to realise a large deficiency from pledged bonds in default secured on branches not taken over by the New Company. There would probably be deductions for expenses of collection of the deficiency, and assessments upon the Collateral 5's would doubtless be necessary for development of the branches not taken over by the New Company. Considering these conditions, it is believed that the intrinsic value of the Collateral 5's, as well as the measure of importance and value to the System of the properties comprised in their security, is recognised by the offer of 100% in new First and Refunding 5% Bonds secured by a system mortgage covering a large mileage with diversified traffic, which is believed to afford a greater measure of safety than the existing collateral.

$57,255,000 *Missouri Pacific Forty-Year 4% Gold Loan Bonds Due* 1945, *and*

$29,806,000 *Missouri Pacific 5% First and Refunding Mortgage Bonds Due* 1959:

The position of these two issues is thus described in the Introductory Statement to the Plan:—

"The main burden of the readjustment in its immediate effect must necessarily be borne by the stock and by the two junior issues of bonds, viz., the Four per Cent. Gold Loan Bonds and the Five per Cent. Refunding Bonds, but it is hoped that the returns from the contemplated development of the property will be such as to more than compensate for the modification in their status to which their holders are now asked to consent. It has been deemed fair and logical to treat the two issues of bonds alike in the allotment of new securities.

"While the Five per Cent. Refunding Bonds have a mortgage lien, the Company is not earning its fixed charges, and in order to provide the means absolutely required to meet maturing underlying obligations (chiefly secured by prior liens upon the Missouri Pacific lines proper) and other capital requirements, and to re-establish the Company's credit, there is no alternative but the surrender of this mortgage. As to the Four per Cent. Gold Loan Bonds, their claim on the Missouri Pacific lines ranks behind that of the Five per Cent. Refunding Bonds. On the other hand, if the holders of the Four per Cent. Bonds were to take possession of their collateral, the St. Louis Iron Mountain and Southern Railway stock, they would lose the many operating economies and valuable traffic arrangements enjoyed as a result of the close interdependence of the two main properties, which manifestly could not be operated separately so advantageously for either property as when united. They would be confronted with the task of raising the necessary funds for the requirements of the Iron Mountain Company, which is already subject to a very heavy mortgage debt—more than twice as much per mile as the mortgage debt ahead of the Missouri Pacific Five per Cent. Refunding Bonds. They would not obtain the benefits of the money to be raised under the present Plan through the proposed assessment on the Missouri Pacific stock, nor of the proposed retirement of the $29,423,000 of Iron Mountain Six per Cent. Bonds with their heavy sinking fund requirements, nor of the provision for dealing with the Iron Mountain endorsement on $1,741,000 Texas and Pacific notes and for paying the Iron Mountain floating debt. In other words, the Four per Cent. Gold Loan Bondholders would in that case become common stockholders in the Iron Mountain Company saddled with the burden of financing it, instead of being, as they will be under the present Plan, Preferred stockholders in the whole system with its financial needs adequately provided for.

"While it is deemed absolutely indispensable to convert these two bond issues into Preferred stock (or income bonds if conversion into Preferred stock should be found impracticable), it should be particularly observed that the proposed readjustment (except only for a portion of the money raised) places no lien ahead of them which does not rank prior to one or the other of them *now;* in fact, upon the complete consummation of the Plan, the charges ranking ahead of the new securities to be given to holders of Four per Cent. Gold Loan Bonds and Five per Cent. Refunding Bonds (taking the System as a whole) will be less than the charges ahead of them now.

It should be added that the failure of the attempt to effectuate the Plan through the voluntary action of the security holders, and the foreclosure proceedings now in progress under the First and Refunding Mortgages of both the Missouri Pacific and Iron Mountain Companies, have only increased the importance of prompt deposit under the Plan by the holders of these two issues with a view to co-operation in terminating the receiverships at the earliest practicable moment. The plan offers 100% in new Convertible 5% Preferred Stock in exchange for both of these issues.

$3,972,000 *Kansas & Colorado Pacific First Refunding Mortgage 6% Bonds due* 1936:

Although only $3,972,000 of the Kansas & Colorado Pacific 6's are outstanding in the hands of the public, $16,715,000 additional are pledged under the existing Missouri Pacific First and Refunding Mortgage and will doubtless become the property of the Purchasing Committee under the latter mortgage upon the completion of the foreclosure proceedings now in progress. These bonds follow in lien the pledged bonds securing the Trust 5's of 1917 and the Collateral 5's of 1920 on almost all of their Kansas mileage. Accordingly it is believed that full allowance is made for the equities and the intrinsic value of the Kansas & Colorado Pacific 6's now outstanding by placing them upon a parity with the existing First and Refunding 5's (although the latter are secured upon a much larger mileage), and by offering them the same allotment in new securities, namely 100% in new Convertible 5% Preferred Stock.

$[illegible].000 *Missouri Pacific, Lexington Division 5% First Mortgage Bonds, due* 1920.

$[illegible].000 *Leroy & Caney Valley 5% First Mortgage Bonds, due* 1926.

$1,024,000 *Kansas City Northwestern First Mortgage 5% Bonds, due* 1933 *and*

$500,000 *Bonne Terre, St. Louis & Southern First Mortgage 5% Bonds, due* 1951:

These four issues of bonds are secured by first mortgages upon branches which it is believed could without material detriment be dropped from the System. It is estimated that for some time past none of these branches has yielded any substantial excess above operating expenses, while some of them have been operated at an actual loss. Their potential values as contributors of traffic to the System or otherwise are believed to be fully recognised by giving them 100% in new Convertible 5% Preferred Stock.

$3,459,000 *Central Branch First Mortgage 4% Bonds, due* 1919, *and*

$2,550,000 *Central Branch, Union Pacific First Mortgage 4% Bonds, due* 1948:

These two issues of bonds are secured by first mortgages upon portions of the branch from Atchison westward to Lenora, neither of which portions, according to careful estimates, has for some time past earned any substantial amount above operating expenses. This branch is not indispensable to the System, but in favourable crop years it originates desirable traffic, and it is believed to offer somewhat greater potential future value to the System than the lines securing the four bond issues last above mentioned. These two issues are accordingly offered 50% in new General Mortgage 4% Bonds and 50% in new Convertible 5% Preferred Stock.

$4,175,000 *Iron Mountain First and Refunding Mortgage 6% Bonds;*

These bonds are of the same issue as the bonds of which $25,000,000 principal amount are pledged to secure the Missouri Pacific Gold Notes. As these bonds are secured by a general lien on practically the entire Iron Mountain System (over 3,100 miles of road) and bear 6% interest, the Plan offers their holders 105% in new First and Refunding 5% Bonds.

$393,000 *Little Rock Junction Railway First Consolidated 6% Bonds, due* 1916, *Guaranteed by the Iron Mountain Company;*

These bonds are secured by mortgage upon an important bridge property near Little Rock, and their co-operation in the Plan is of value to the New Company. On the other hand, the Iron Mountain Company is not without an alternative route into Little Rock, and the Iron Mountain traffic is believed to be essential to the value of this bridge property. In view of these considerations the Plan offers to holders of these bonds 100% in new First and Refunding 5% Bonds.

Dated, New York, October 15, 1915.

MEETINGS
OF PUBLIC COMPANIES.

DALGETY AND COMPANY, LIMITED.

THE thirty-first annual meeting of Dalgety and Company, Limited, was held on November 16 at the offices, 45 Bishopsgate, E.C., the Hon. Edmund W. Parker (the Chairman of the Company) presiding.

The Secretary (Mr. H. E. Davison) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen, You have now had the directors' report and balance sheet in your hands for some days, and I presume will take them as read. Last year, when I had the honour of addressing you, this country had been at war for some three and a half months, and, most unfortunately, that state of affairs still continues.

Effect of Drought in Australia.

This, of course, is very detrimental to business; nevertheless, I think shareholders may congratulate themselves that we are able to lay before them such a satisfactory balance sheet, having regard to the fact that, in addition to the pernicious effect of the War, Australia has suffered from a severe drought during the period under review. Luckily, in the early part of this year the drought broke up in most parts, the only State that is still suffering from want of sufficient rain being Queensland and some districts of New South Wales and South Australia; but, as it is, the losses of stock have been exceedingly serious, amounting to anything from 15 millions to 20 millions of sheep throughout the Commonwealth. This must inevitably lead to a serious shortage in the coming clip. As you are aware, the prices for wool, in which we are chiefly interested, have been much more favourable than was at one time anticipated, and, on the average, the returns to growers have been most satisfactory; indeed, in the case of our New Zealand clients, they have been abnormally so, in consequence of the very high values for crossbred wools. On the other hand, wheat, which in ordinary years had become an article of large export from Australia, was a complete failure last year, and so far from there being any export, there was a considerable quantity imported.

Dividend of 8 per Cent.

We propose, as you will have seen, to pay, with your sanction, our usual dividend of 8 per cent. and to revert to our policy of building up our reserve and writing down our premises, as I intimated to you last year we should do, if circumstances permitted it. I think you will agree that circumstances do permit this, and I feel sure we shall secure your approval of our action. It has always been the custom of this Company to pay its dividend free of income tax. I hope that we may be able to continue doing so; but with the very heavy increase in taxation, both here and in Australia, the burden is becoming a heavy one, and must, of course, become heavier. Last year I told you that, had it not been for the War, we had hoped to be able to give you a bonus in addition to the dividend, and I think that you will now, and perhaps for some time to come, have to consider (if we are able to continue our custom) that the payment of the dividend free of income tax is equivalent to a bonus, having regard to the growing pressure of taxation.

Australian Seasonal Prospects.

You will, I know, like to hear the most recent seasonal news that we have from the other side, so I will read you our latest telegrams:—

Pastoral.—In Victoria and South Australia the pastoral outlook is excellent, and in Western Australia good at present. The position in New South Wales is satisfactory to good, except in the northern, north-western, and parts of the western districts, where the situation is serious. In Queensland the season generally is very adverse, except in parts of the western and coastal districts. It is estimated that the shortage of sheep in Australia, as compared with last year, amounts to 20 millions, and that there will be a reduction of about 500,000 bales in the 1915-16 wool clip.

Agricultural.—The production of wheat in Australia from the ensuing harvest is estimated at one hundred and forty-five to one hundred and fifty million bushels, of which about one hundred million bushels will be available for export.

Dairying.—Prospects in Victoria and South Australia are good, but elsewhere they are adverse. Butter exports from Australia will compare favourably with last year as regards quantity owing to the depletion of the Victorian dairying herds during the recent drought and to the existing dry weather in Queensland and on the coast of New South Wales.

New Zealand Seasonal Prospects.—As a result of recent beneficial rains prospects for producers generally are good.

The Balance Sheet.

I will ask you now to turn to the balance sheet, and I will explain some of the variations in the figures from those of last year. The first item on the debit side that calls for comment is, I think, Terminable Debentures, which show an increase of £90,165, due to our having issued, towards the end of last year, £125,520 5% Debentures. We did this partly to strengthen our financial position, in view of the very troubled outlook, and partly to replace funds that had to be paid out for Debentures falling due, which were not renewed. Bills payable are £182,957 less. This is always a fluctuating item, but the drop this year is owing chiefly to the absence of any wheat transactions, and the same remarks apply to produce realised and not transferred to branches, which item shows a decrease of £300,904. Sundry creditors and customers' balances are less by £310,500, owing to our having paid off deposits to that extent during the course of the year. On the credit side, cash at bankers is less by £276,015, but against this we have investments, £336,307, which we had not last year, and these investments, as you will notice, are principally represented by Treasury bills and War Loan, which we considered it our duty to subscribe to. Bills receivable are £164,518 less. In a business such as ours this must always be a fluctuating item. Advances on land, stations, &c., show a decrease of £505,286, owing to some accounts being paid off, and to the reduction in others through the good prices obtained for wool and other produce. It is partly owing also to the conservative policy I told you last year that we were pursuing of very carefully scrutinising all applications for fresh advances and declining some that in ordinary seasons and normal times we should have taken up, but which under present circumstances we have allowed to pass us. Freehold and leasehold premises, plant, and furniture are less by £24,981. This reduction is brought about by writing off £10,074 for depreciation on leaseholds, plant, and furniture, as shown in the profit and loss account; the difference is accounted for by the amount written off freehold premises and buildings by the branches and deducted from gross profits. In the profit and loss account current expenses are more by £4,242. This is largely accounted for by the contributions we have made here and in Australasia to the different war funds—Red Cross, &c. Income tax shows an increase of £6,267, but this, of course, requires no explanation from me.

The Profit and its Appropriation.

To sum up, the position of the Company now is that, after making full provision for all bad and doubtful debts, we show a net profit of £216,672 1*s.* 3*d.*, to which has to be added the balance brought forward, £197,014 12*s.* 7*d.*, giving a total of £413,686 13*s.* 10*d.* Out of this we have already paid: Interest on Preference shares, £25,000, and interim dividend at the rate of 8%, £40,000, leaving a balance of £348,686 13*s.* 10*d.* to be dealt with now, and which we propose should be appropriated as follows:—£40,000 in payment of a dividend at the rate of 8% per annum, free of income tax, making with the above payment 8% for the year; £50,000 to the reserve fund, thereby raising it to £600,000; £40,000 to writing down cost of premises; £10,000 to the staff benevolent fund; and £208,686 13*s.* 10*d.* carried forward. I think that I have now dealt with all figures in the balance sheet that might call for any comment, but, before putting the resolution for its adoption, there is one other matter I should like to refer to, and that is the staff of the Company. I am sure you will all be pleased to know how well the members have responded to the call of duty. Up to our latest advices from the Colonies, some 250 members have joined the Army; of these, I am sorry to say, nine have been killed, while 15 are wounded or missing. From this office alone 31 men have joined, equal to about 77% of our effectives. You will quite understand from these figures what a strain has been thrown on the rest of the staff to get the work put through; but I can assure you that they have thoroughly risen to the occasion and are doing everything in their power to meet the difficulties. If anyone desires to ask any questions I shall be pleased to answer them to the best of my ability.

Mr. A. P. Blake seconded the motion.

Mr. Acton Adams said that, considering the drought that had extended over the greater part of Australia, he thought the balance sheet extremely good.

Mr. Deane suggested that, instead of carrying forward £208,000, the directors should pay a bonus of 5%, which would absorb only £50,000.

The Chairman, in reply, said that with regard to the suggestion that they had too much money, the fact was that they must be prepared for all emergencies.

The report and accounts were adopted.

HOTEL CECIL, LIMITED.

THE nineteenth ordinary general meeting of the Hôtel Cecil, Limited, was held on November 15 at the Hotel, Strand, W.C., Colonel Ernest Villiers, A.D.C. (Chairman of the Company), presiding.

The Secretary (Mr. W. W. Elderkin) having read the notice and the report of the auditors,

The Chairman said: It will be apparent to every shareholder that the effects of the War must have had a very serious result upon the working of the hotel during the past year. Not only have the visits from Americans and foreigners practically ceased, but the wealthier classes of the kingdom who generally patronise the hotel have, for various reasons—economy, mourning, or a general disinclination for entertainment—not visited the hotel in anything like their usual numbers. Restricted licensing regulations and the darkness of the streets have further curtailed our business. We have had to pay increased prices for nearly everything used in the business, and at the some time we have had to reduce our terms.

The Year's Business.

Turning to the trading account, you will see that the business of the year shows a decrease of £102,144 as compared with last year. On the debit side the purchases are reduced by £28,585 and the working expenses by £10,261. Every care has been exercised to keep the expenses as low as possible, but shareholders will readily realise that there is a minimum below which we cannot go. There is an increase of £1,601 in rates, taxes, insurance, &c., which is accounted for by our two good years—namely, 1913 and 1914—being brought into the average for income-tax purposes. We hope to get some relief under this heading during the present year. Although everything in the hotel has been kept up to date, the greatest care has been taken to keep down expenses. We have done all that is possible for us to do consistent with the proper upkeep of the hotel. In this connection I might mention that, with a view to helping this, the directors have decided to take in future—at all events as long as the War lasts—only half their fees. (Hear, hear.) But you must realise, I think, that when things are not going well the work of the directors, and, in fact, of everyone connected with the hotel, is very much greater than when everything is going smoothly. Ninety-two of our employees have joined the Colours of our own country or those of our Allies, and, for your satisfaction, I may repeat what I told you last year—namely, that we have not had during the past year, nor have we now, in our employ a single German or Austrian, naturalised or not naturalised. (Hear, hear.) The shareholders will, I am sure, be glad to hear that during the year we rendered what service we possibly could to the British Red Cross Society by receiving wounded officers discharged from the military hospitals who had to remain in London for special treatment. I shall be very happy to answer to the best of my ability any questions that any shareholder may wish to put, and I now beg to move: "That the report and accounts, as printed and circulated, be adopted."

Sir Henry Kimber, Bart. (Vice-Chairman), seconded the motion.

Shareholders' Views.

Mrs. Samson said that it would be very ungracious on the part of any shareholder to grumble at the result of the trading for the past year; everyone knew the exigencies of the times and that businesses similar to theirs had suffered. She thought also that they should show their appreciation of the fact that the directors had seen fit to reduce their fees during the War; that indicated that they were taking a real and personal interest in the fortunes of the Company. She would, however, like to draw attention to the fact that the reserve for depreciation stood at the very low figure of £10,157. That, she thought, gave point to her remarks in past years, when the Company was doing very much better, and she had suggested again and again that some reserve fund should be built up, so that dividends could be equalised in bad times. She would also like to ask whether, in face of the present terrible disaster to the country, the directors had seen their way to meet the position by giving special terms during the War to visitors to the hotel.

Mr. Grayson said that he quite agreed in substance with the remarks of the last speaker, and he thought it was rather fortunate that they were able last year to carry forward so large a balance as £20,000, which had enabled them to meet the deficit and carry forward a balance of £11,000 on the present occasion. He noted that the repairs and renewals were only £7,315 that year, as against £15,500 last year, and he would like to urge upon the directors the advisability of not putting in hand, during the War, any repairs that were not of an absolutely urgent character.

The Chairman, in reply, agreed as to the policy of building up a reserve in prosperous times being the wisest and most politic thing to do, but there were times when there was not the wherewithal to build up reserves. As regarded special terms, he might say that they had been obliged to grant special terms, as he had indicated in his speech, and those special terms had to a certain extent been satisfactory, as they had brought in a certain number of people.

ANSELL'S BREWERY.

A Strong Financial Position.

THE annual meeting of Ansell's Brewery was held on November 18 at the Queen's Hotel, Birmingham, Alderman Edward Ansell presiding.

The Chairman, in proposing the adoption of the annual report, referred to the retirement from the directorate of Mr. Peter Waltho, to whom he was sure the shareholders wished a speedy restoration to health.

The Balance Sheet.

Dealing with the balance sheet, Alderman Ansell said, although the net profit for the past year was not quite up to the record established in 1914, the results shown were perfectly satisfactory, the financial position of the Company being even stronger than a year ago. The profit, after making full provision for bad and doubtful debts and depreciation, was £87,054, and with the addition of the balance from the previous year made £157,974. In 1914 the profit was £91,546, to which had to be added £59,149 carried forward, making a total of £150,695. In each year the dividend was the same, but they carried forward this year £78,049 against £70,920. Thus, despite a slight decline in profits, the balance at the disposal of the directors and the sum carried forward showed substantial increases.

Dividend.

This was the twelfth year in succession that the Ordinary shareholders had received a dividend of 10%, while the present addition of £25,000 brought their reserve up to £325,000. With the amount carried forward they thus had a total reserve of £403,000—twice the amount of the Ordinary share capital held by the original vendors. Since the formation of the Company an amount equal to 50% of the original capital had been added to the capital fund of the undertaking from profits. There was no goodwill or mortgage item, and the directors had used the reserves mainly in buying properties and converting leaseholds into freeholds and generally consolidating the assets of the Company. He did not think for a moment the shareholders need be alarmed or apprehensive as to the future. He was satisfied that, short of confiscation—which he did not think was likely to come—the Company occupied to-day a very strong financial position.

Patriotism of Employees.

He referred with some pride to the record of the Company as regarded recruiting. He thought it reflected very great credit upon their employees. No less than 60% of their total staff had either joined his Majesty's Forces or entered munition works, and from the outset the firm adopted a scale of payment which ensured that the households of the married men received not less than prior to the men's enlistment. Similar allowances had been made to the dependants of single men. Of course, their situations would remain open for them, and they hoped the great majority would return to them. He regretted that up to the present time five of their men had lost their lives.

The New Drink Restrictions.

Alderman Ansell concluded with a reference to the new drink restrictions. He said it was too early to criticise in any way, but he would like to call their attention to a statement made in Birmingham a few days ago at a meeting held in connection with the United Kingdom Alliance. One of the speakers said "he believed there was a secret scheme afoot whereby the intention of the Central Control Board was to be defeated if possible, unless they were very careful." He (Alderman Ansell) was satisfied that the loyalty of the trade in the past should be a sufficient guarantee of its willingness to give loyal adhesion to the new order, which would come into force on Monday next. They were all anxious to do their very best to bring the War to a speedy and successful termination. It did undoubtedly entail many sacrifices, but sacrifices they would all be prepared to make cheerfully and willingly. He thought so far the trade had behaved very patriotically, and was satisfied that as far as the continuance of the discharge of their duties were concerned they would not be found wanting.

Mr. Joseph Ansell also referred to a statement made at the United Kingdom Alliance meeting, and said that on all occasions, and particularly during the last few months, the members of the licensed trade association in Birmingham had placed their services practically in the hands of the Licensing Committee, and had offered to do anything that lay in their power to facilitate their requirements in relation to the sale of intoxicants. If people would look at the cases which were brought to the Assizes, the Quarter Sessions, and the Police Courts they must know that crime and drunkenness—and it was generally said drunkenness led to crime—were considerably decreasing. Whereas before the extension of the city the magistrates used to sit day by day at the police courts until three or four in the afternoon, now, notwithstanding the larger area and the increased population, the business of the courts was generally finished in time for the justices to get away for lunch.

Mr. J. A. Fairhurst seconded, and the report was adopted.

Mr. Fairhurst was re-elected a director, and the auditors were reappointed.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED.

THE ordinary general meeting was held on November 17 at Winchester House, Old Broad Street, E.C., under the presidency of the Right Hon. Lord St. Davids, the Chairman of the Company.

The Chairman, in moving the adoption of the report and accounts, said: In the last financial year of this Company we had an exceptionally good wheat crop, which stood by us well. On the other hand, the maize and the oats were injured to a considerable extent by [illegible] such as is very unusual in the Argentine. During the year the tonnage we carried was greater, but most of it was in the nature of low-classed goods like wheat, and it was unfortunately in the traffic which pays a higher rate that we had a decrease. In passengers we actually lost, as compared with the year before, £291,000, and in parcels and luggage £20,000. In general goods we lost £173,000, and in building materials £45,000. Well, as I said, we gained on the wheat, and the result was that our gross receipts were £342,000 less than they were in the preceding year, but the profits from the traffic were only £86,000 less, and the reason for this is that we were successful in making very considerable economies indeed. The economies came to £256,000, which, I am sure, you will agree is a great feather in the cap of our general manager, and we are under obligations to him for it. The net results of the year, in a nutshell, are that we pay our Second Preference holders £2 16*s.* 6*d.* per cent., and there is a fractional sum over not enough to split up into a dividend—which is carried forward partly for their benefit and partly for the benefit of the Argentine Great Western Ordinary shareholders, who rank with them. You will ask me: What about prospects? First of all, the area under wheat is greater than it was last year. That is the first good feature. On the other hand, some damage has been done by drought on the Bahia Blanca section, and serious damage in a not very large district on the Pacific line near Villa Mercedes. There the wheat has been seriously damaged by drought, but our general manager still estimates that the crop will be a good one. We have got a visitation of locusts, and undoubtedly the locusts have done, at any rate, some little damage to the wheat crop. On the other hand, the maize crop, with the number of locusts in the country, will undoubtedly be liable to very material damage. There is another bad point, which is that during the current year our expenses are bound to go up from the increased price of coal. Now, gentlemen, to turn to the more cheerful side. We have a traffic increase up to date £310,000. Well, up to the time of this news about the locusts I had been very sanguine that at the end of our financial year on June 30 next we should probably not only keep that increase, but augment it. With this locust news, until we know how it turns out I cannot pretend to be as sanguine as that, but I do hope myself that we shall retain, at any rate, a considerable part of that increase. There is one other point which I think you would like to hear something about—that is as to our financial position. You have only to look at the report and accounts for yourselves to see that for a company of our size our financial resources are very considerable. We spent last year on capital account £350,000, but £162,000 of that was on doubling and stone-ballasting. The doubling which we were undertaking has been completed, but the stone-ballasting we have very reluctantly and sadly been obliged to stop. Taking those two items out, the amount we actually spent on capital account during the year was only £188,000. We shall spend as little as we possibly can. I think you may fairly put it that, taking the next two or three years together, we ought to keep our capital outlay under £200,000 per annum—more or less—and it will be very unlikely that during that time we shall have to come to you for further capital.

Mr. Edward Norman seconded the motion, which was carried with one dissentient.

BAHIA BLANCA AND NORTH-WESTERN RAILWAY COMPANY, LIMITED.

THE twenty-sixth ordinary general meeting of the members was held on November 17, at Winchester House, Old Broad Street, E.C., the Right Hon. Lord St. Davids (Chairman of the Company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The dividends guaranteed by the Pacific Company under the terms of the working agreement have been duly received. As you will have seen from the report, the present guaranteed shares under the terms of issue will be converted into Four and a Half per Cent. Guaranteed stock on April 1, 1916. Later on in our proceedings I shall propose a resolution to that effect. You will be pleased to know that the wheat and oat crops turned out well in the districts served by your railway, and that the traffic receipts were considerably above the average of the five previous years. Although as a guaranteed Company we are not interested directly in the working of our property, still it is a matter for congratulation to us to know that the concern is progressing favourably. I can best illustrate the importance of Bahia Blanca by telling you that during the nine months to September last the total exports of wheat and oats of the Argentine Republic was 2,900,000 tons, and of that total 1,500,000 tons, or very nearly a half, was exported from the port of Bahia Blanca. During the past year we have been able to keep down capital expenditure, and have obtained the sanction of the Argentine Government to defer branch construction work until the return of normal times.

Mr. Edward Norman seconded the resolution, which was carried unanimously.

The Chairman: I now beg to move the following resolution, namely:—"That the directors be and they are hereby authorised to convert on and after April 1, 1916, the 200,000 Five per Cent. Guaranteed shares of £10 each, numbered 1 to 200,000, into £2,000,000 Four and a-Half per Cent. Guaranteed stock."

The motion was seconded by Mr. Norman and carried.

MALAYAN TIN DREDGING, LIMITED.

THE fourth annual general meeting was held on November 15 at the Institute of Chartered Accountants, Moorgate Place, E.C., Sir Ernest W. Birch, K.C.M.G. (the Chairman), presiding.

The Chairman, in moving the adoption of the directors' report and accounts for the year ended June 30, 1915, said: If you will look at the profit and loss account you will see that the expenses at the mine amounted to £28,617, as compared with £13,929 in 1914. In the previous year No. 1 dredge ran for twelve months and No. 2 for two months—that is, fourteen months in all. This year you have had two dredges running over a period of twelve months and one for nine months—that is, 33 months in all. This more than accounts for the increased cost. It is true, as explained to you in the monthly postcards, that No. 1 dredge did not run for practically two months this year owing to two serious accidents. The necessary repairs entailed considerable expenditure, and partly accounts for the increase in the cost of repairs and maintenance from under £2,000 in 1914 to over £4,000 this year. The expenditure in London was £1,522 last year and £1,811 this year. The profit carried to the balance sheet is £12,091, as compared with £9,474 in 1914. On the receipts side of the accounts you will see that the sales of tin ore realised, say, £45,000, as compared with, say, £24,000 in the previous year. The output in 1914 was 236 tons, and this year it rose to 503½ tons. It might reasonably have been expected that the realisations, like the output, would have been more than doubled, but unfortunately the price of tin fell and the amount realised from our tin ore averaged 14*s.* 7*d.* per picul (or over £12 per ton) less than in the previous year. The average price of metallic tin (London three months' price) fell from £175 in the previous year to £152 in the year with which we are dealing. I will now ask you to look at the balance sheet. There has been an addition of £16,628 to the plant and machinery account, principally for No. 4 dredge, including its freight and erection. The directors have written off depreciation on the same lines as last year—that is, £750 depreciation for each dredge. This year we have decided to write off the cost of the freight of all the four dredges, or a sum of £5,953. You will observe that the stocks of stores and fuel in hand on June 30 have been increased from £1,199 in 1914 to £3,366. This is in pursuance of our policy to have a full stock of spare parts for repairs and maintenance on the property in order to save time in case of any sudden breakdown. The next point for examination is the cost to us of the work done. The stuff turned over approximated two million cubic yards at an "all-in" cost of 4*d.* a yard, or .80*d.* less than in the previous year. To put it in another way, it cost us less by 2*s.* 6*d.* per picul to obtain our ore, although the ore value of the ground worked was lower by .08 of a catty per yard—namely, .43 of a catty, as compared with .51 of a catty per yard in 1914. These figures are satisfactory, and it only remains for us to get into better ground and to sell our ore at a higher price in order to show bigger returns. We had worked out by the end of June 51 acres of a total of 1,191 acres. I do not intend to deal with Mr. Perkins's very full report printed with the report and accounts beyond calling attention to his expression of confidence in the future of the mine. For the four months of the year on which we have now entered the mine profit amounts to £13,134, and the directors this morning have declared an interim dividend in respect of the year ending June 30, 1916, of 1*s.* per share, less income tax, payable on the 30th instant, to all shareholders on the register at to-day's date.

Dredging Operations.

Mr. H. B. Perkins, in speaking of the mining, said: We have an area of [illegible] acres of dredging ground, as we have already told you, we opened up operations on the [illegible] part of its [illegible] proximity to the [illegible] Dredge. During the year [illegible] greater had it not been for the unfortunate accidents to No. 1 dredge, which was laid up for at least two months.

It is very pleasing to know that No. 4 dredge started operations this month, and she will enable us to considerably increase the returns, the benefit of which will appear in our next year's accounts. It can be safely asserted that our policy of larger dredges has been an unqualified success and that valuable experience is continually teaching us new points for economy and improvements and in the general maintenance of our machinery in good working order.

The motion was carried unanimously.

Mr. Walter J. Payne was re-elected a director, and in thanking the shareholders said he wished to remind them that this Company was the pioneer of bucket dredging in the Federated Malay States. The credit for this was due to his colleague, Mr. C. V. Stephens, and he thought they had every reason to be satisfied with the progress already made.

A vote of thanks to the Chairman, directors, and staff closed the proceedings.

EDISON AND SWAN UNITED ELECTRIC LIGHT COMPANY, LIMITED.

THE thirty-second ordinary general meeting was held on November 18, at Winchester House, Old Broad Street, E.C., Mr. C. J. Ford, the Chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said: With a view to extending the Company's manufacturing facilities, the sum of £8,690 has been expended on additional buildings to cope with its increased trade, and this is included in the balance sheet under the item freehold and leasehold property, standing at £73,036. Plant and machinery, for a similar reason, have been increased by the sum of £8,706, and you will note that the account now stands at £84,613. One of the principal items included in this additional expenditure has been in respect of our glass furnaces, and these are now equipped for an output of lamp bulbs of practically double the capacity which existed heretofore. While on the subject of lamps, I am glad to be able to tell you that we have in the past year found no difficulty whatever in disposing of the whole of our output, and could undoubtedly have sold more if our manufacturing capacity had been greater, but it is only within the last few months that the additional furnaces and plant have been available, and further moderate expenditure will be required. There has also been a considerable increase in the sale of goods produced in the engineering side of the works. In normal times the sales of lamps we have made would undoubtedly have shown us a considerably greater profit, but we are in this position: that the selling price of the drawn-wire lamp cannot be increased; in fact, it is more likely to be reduced. On the other hand, the cost of manufacture has risen to an abnormally high figure in consequence of increase in wages and the cost of raw materials. Anyhow, the Company has undoubtedly established the reputation of the "Ediswan" drawn wire lamp, and unless something altogether unforeseen should happen in the future I see no reason why the increased sales should not continue. Turning to the profit and loss account, the balance of gross profit brought from trading account has been increased from £51,244 to £56,962, the net result being that we have made a profit for the year under review of £14,146, against £4,695 last year, which I hope, under all the circumstances, you will consider fairly satisfactory. I much regret that it is not possible for the directors to recommend the payment of a dividend. You will remember that on previous occasions I have pointed out to you it is absolutely essential, before any dividend can be paid, that we should accumulate a very substantial reserve fund, which means that instead of dividing the profits we shall keep them in the business and employ them as additional working capital, and for this reason the Board recommend that a start be made in this direction by transferring to reserve account the sum of £15,000 and carrying forward to next year's account the balance of £4,878 16*s.* 3*d.*

Mr. E. B. Ellice-Clark seconded the motion, which was carried unanimously.

MALAYSIA RUBBER CO.—Interim dividend of 5%, less tax.

MALTA AND MEDITERRANEAN GAS CO.—Interim dividend at the rate of 4% per annum, tax free, on Ordinary.

MARSTON, THOMPSON, AND EVERSHED.—Interim dividend on Ordinary shares at the rate of 5% per annum.

MILLOM AND ASKAM HEMATITE IRON.—Dividend on Ordinary shares, making 10% for the year.

NATIONAL BANK OF SOUTH AFRICA.—An agency of this Bank has been opened at 6 Wall Street, New York.

NEW PEGAMOID.—Dividend at rate of 10% for year.

PEASE AND PARTNERS.—Interim dividend on the fully-paid Ordinary shares of 8*s.* per share, being at the rate of 8% per annum. Also an interim dividend on the Deferred shares of 8*s.* per share, being at the rate of 8% per annum.

PLITTERS, LTD.—Interim dividend at the rate of 5% per annum on the Ordinary shares, less tax.

SHAWINIGAN WATER AND POWER CO.—Dividend of 1¾% for quarter on Common stock.

MONEY.

Were it not for the small supply of bills discount rates would be firm, but with very few bills on offer rates are maintained with difficulty. The fine rate for 60-day drafts is now about 5⅛%; for three months' 5⅛ to 5¼%, and for four and six months' 5¼%. It would be difficult to maintain these rates were it not that the supply of money in the market has been substantially reduced by borrowings of short money by the Bank of England. The Bank of England return this week shows that bankers' balances have been reduced about £7,000,000. It is, however, evident that the value of money in London should be maintained at a profitable level in order that as much foreign money as possible should be retained here by attractive rates.

Of course, with our great purchases of goods from abroad it is obvious that the foreign exchanges will remain against this country, and no matter what the Bank of England rate may be the situation would not be fundamentally changed. Nevertheless, profitable rates of interest in London will induce foreign and Colonial bankers to leave in London a large part of the great sums of money accruing to them in consequence of our immense purchases of foreign goods. Probably a rate of 5% for Treasury bills, and of about 5¼% for Bank bills will accomplish this object. The action of the Bank of England in declining to discount for the market at under 5½% and in borrowing money from the market at 4½% has for its object the retention in London of as much foreign money as can be induced to remain here by an effective rate of 5%.

Of course the effective method of adjusting the exchanges and again making the Bank of England rate effective in stopping gold shipments is the creation of foreign credits, the sale abroad of British holdings of foreign securities, the reduction of imports, and the increase of exports. But we think it will be recognised in all parts of the world that the British people are fully warranted in using their credit and in selling securities for the purpose of paying for all the goods and material they need to purchase from abroad at the present time, and that they are also more than justified in lending their credit and in supplying their Allies with financial resources. Foreign countries, indeed, are as much interested in avoiding any undue drain upon the gold reserves of this country as are the British people themselves. If foreign balances are withdrawn from London in undue amount it will simply mean that the British people will be compelled to reduce their purchases of foreign goods, and that the countries which take them balances away in a manner that tends to disturb the London Money market will most severely suffer from the reduced demand for their goods which must inevitably ensue. That the British people are buying so freely from abroad is a matter of very great advantage to the countries from which the purchases are being made, and it is obvious that those countries in their own interests should facilitate these purchases in every possible way, knowing and realising how great is the wealth of Great Britain and the ease with which Great Britain will be able to pay for the goods in one way or another.

As regards the British people themselves, however, the matter presents a different aspect. It is for them to question the desirability of purchasing so many goods from abroad that are not really necessary, and to consider the question of the disadvantage of realising capital by the sale of securities for the purpose of buying goods that are not essential. The movement in this country in favour of economy is steadily expanding, and it is obvious that in a short time the British people will effect such substantial economies in their expenditures that the balance of trade against them will be so greatly reduced that they will not need to sell any greater quantity of securities than they are purchasing from their Allies and Colonies.

We have no doubt that foreign and colonial countries recognise this situation, and therefore are quite willing to leave in London large balances for employment at 5% and to take payment for the remainder of the goods sold to the British people either in British goods or in securities. In these circumstances the Bank of England seems to be acting wisely in maintaining an effective 5% rate for the purpose of giving foreign countries sufficient inducement to leave substantial balances in London.

BANK OF ENGLAND.

The efflux of £1,256,000 in gold and of £288,000 in notes was entirely responsible for a reduction of £1,401,000 in the Bank of England reserve, as on balance £143,000 in gold was received on foreign account. The net loss of gold was £1,113,000. The reserve is now £37,605,000, and the gold £52,457,000, while the note circulation is £33,302,000. There was a reduction of £7,027,000 in the "other" deposits, and this brought about an increase of £1,967,000 in the public deposits and a reduction of £3,645,000 in the "other" securities. The amount of the public deposits is now £52,149,000, while the "other" deposits are £84,649,000. The proportion of reserve to liabilities is practically unchanged for the week at 27.58.

MONEY IN NEW YORK.

Exchange has been steady this week and improved at one time to 4.70⅜, from which there has been a slight reaction. The supply of money in New York remains very abundant, and call loans can easily be obtained at 2%. Last week there was an addition of £1,600,000 to the reserves of the Associated Banks and trust companies, while their loans increased £1,000,000 to £38,988,000. Since the beginning of the year the stock of gold in New York has increased about £58,000,000, and in spite of the enormous increase in loans and deposits the banks still hold far more gold than they can find use for.

Rates for prime commercial paper and for call loans in New York are as follows:—

Nov. 24, 1915 ...	Prime paper ... 2½-3%	Call money ... 2%
Nov. 27, 1914 ...	„ „ ... 4½-5%	„ „ ... 4½%

POSITION IN INDIA.

Exchange has not been quite as firm this week, and rates are down to 1s. 4d. for telegraphic transfers. The demand for the 50 lacs of Council bills was fairly

large, but rates were lower. The efflux of cash from the monetary centres continues, and the stock of coined silver in the Currency Department has been reduced another 83 lacs to 3,472 lacs.

The following are the minimum Rates of Discount current in India:—

Bombay ... 6 per cent. (Nov. 4, '15) | **Bengal** ... 6 per cent. (Sept. 24, '15)

Particulars of the Tenders received and the Allotments made by the India Council on Wednesday last, November 24, are:—

From **April 1** to **November 23** inclusive the Council granted remittance for **Rs. 8,90,86,061**, realising **£5,941,124.** Up to **November 24** of last financial year the total Bills and Transfers sold was **Rs.6,31,81,861, realising £4,214,531.** The total sales for the week ended **November 23** amounted to **Rs. 50,00,000**, realising **£333,659.** The amount to be offered for tender next Wednesday will again be 50 lacs.

SILVER.

There has been quite a sensational rise in the price of silver this week in consequence of the discovery last week that the stock in London was so small. Holders of the metal have not been disposed to sell while there was an active inquiry from the Continent as well as from India. Consequently the price, which on Saturday last was at 24 7/8*d.*, rose on Tuesday to 25 3/8*d.*, on Wednesday to 26 1/8*d.*, and to-day to as much as 27*d.* Apparently a further advance in the price must occur in order to bring out sufficient silver to meet the demand. It is apparent, however, that the supply cannot be increased very rapidly. It is true that the reports from Mexico indicate a more assured political situation in that country, but when order is restored it is obvious that the exports of silver from Mexico will be relatively slow.

Stock Exchange.

Last week we referred to contemplated action by the Stock Exchange Committee—with the sanction of the Treasury—in two directions, and both steps have since been taken. Firstly, there now is abolition of the necessity to give the numbers of the shares as well as the name of the vendor, the "name" alone now being sufficient; and, secondly, there is the removal of minimum prices as regards British Funds, Corporation stocks, also foreign stocks, bonds, &c. It may be recalled that Consols were retained for a time at the minimum price of 68 1/4, later at 66 1/2, and subsequently at 65. When this week the market was left to take care of itself, the anticipation was that a price of about 58 would be the new quotation, and this proved to be a correct forecast. There was a momentary descent at one time to 57 1/2, but the latest quotation of Wednesday was close to 58. Subsequently a distinct advance set in, raising the price to fractionally over 59. Apparently, some amount of further conversion, through selling of Consols at current price and the purchase of new War Loan, has been an outcome of the action taken, and the price of War Loan issues has improved, the latest quotations for 4 1/2% being 97 1/2 for Inscribed xd stock, and 99 5/8 for Cum. Div. scrip.

For a period markets in general were very inert, but later a change for the better was shown, and a pretty well all-round hardening of quotations occurred.

At the commencement of the week there were large dealings in Rubber shares, and a further advance occurred. The pace was too fast to last, and a check has been given to what was developing into wild buying for speculative account. In general the maximum prices in this department were attained on Tuesday, as a consequence of the further appreciable rise in the commodity, which from last Friday's quotation of about 3*s.* per pound for Standard Crepe rose by Tuesday to as high as 3*s.* 7 3/4*d.*, but the price has since reacted to 3*s.* 3*d.* It has been contended in some quarters that the movement that has taken place is unjustified, and has only been brought about by speculative action conducted by Mincing Lane operations. Of course there has been speculation, but it is based on strong views as to the future of the Rubber industry, and is not mere gambling. We say no more now on this point. It is also alleged that many rubber companies during the recent rise have entered into "forward" contracts at an average price of about 2*s.* 5*d.* per pound. This appears a low price considering the present quotation, but it has to be recollected that companies as a rule only sell part of the anticipated crop forward. The proportion, of course, varies according to the individual ideas of those in control of the companies in question as to the outlook for the commodity, many preferring to have a bird in the hand instead of waiting for a possible two in the bush; while others act extremely cautiously and sell but a small proportion forward. But even so it has to be borne in mind that the price realised in 1914-15 by those companies whose years ended December 31, 1914, and June 30, 1915, averaged slightly over 2*s.* per pound, and if a large proportion of the crop of 1916 financial periods, whether ending June 30 or later, has been sold at 2*s.* 5*d.* per pound, and some proportion of the crop retained, it is quite on the cards that an average of 2*s.* 6*d.* per pound may be secured for the year 1916, or, say, an additional profit of just under 6*d.* per pound. Even for some companies whose financial year ends December 31, 1915, it would not be unreasonable to expect an average gross price of 2*s.* 4*d.* per pound to be secured. Further, it is to be borne in mind that a great number of companies, superadded to the benefit of the higher price for the commodity, are expanding their outputs, and this is normally accompanied by lower "all-in" costs. The position from the rubber producers' point of view is, therefore, a very satisfactory one. In Editorial remarks later in the paper we deal with a formula for estimating whether or not a share is quoted at an attractive price.

A mild revival of interest has this week taken place in the Oil-share market.

The only means of securing relief from **Income Tax and Super Tax** and of providing for **Death Duties** explained in a special brochure

"DEATH & TAXES"

B

LONDON, CHATHAM AND DOVER RY.

An interesting issue is about to be made by the London, Chatham, and Dover Railway in the form of Short-Term Mortgage bonds running for a period of five years. Since the War began issues of home railway capital of the old form have not been possible, and in order to attract investors the companies have had to offer more generous terms. In the case of five out of the six railway issues made in the past 14 months, Preference stocks have been disposed of, redeemable in a few years, when it is anticipated they will be replaced by perpetual Preference stocks bearing lower rates of interest. As in the case of the Great Central, the position of the Chatham is not such as to enable redeemable Preference stock to be sold, and therefore short-dated Debentures have to be issued instead. The new capital which has been sanctioned by the proprietors of the Chatham Railway this week is needed to pay the Company's share of various works in course of construction, or for which contracts had already been placed by the South-Eastern and Chatham Joint Committee prior to the War. These works are necessary for the development and betterment of the undertaking, and include the new marine station at Dover and improvements and extensions of the locomotive and wagon shops at Ashford. Further, the Company desires to pay off certain outstanding loans. The Company's Act for the current year authorised the raising of £1,000,000 by means of 5% Debentures, but the Treasury at present has sanctioned the issue of only £323,000. The new bonds will bear 5% interest, and it is believed will be disposed of at about 98, at which the yield would be about £5 9*s*. 3*d*. per cent., allowing for redemption at par five years hence. The bonds will be amply secured, the margin in excess of all interest and other charges for the year 1914 being about £290,000, which will also be about the figure for the current year. Possibly by the time the bonds fall due investment conditions will be such that the Company will be able to retire them by raising permanent Debenture stock bearing a lower interest rate.

ARGENTINE GREAT WESTERN RY.

It is doubtful if the shareholders of the Argentine Great Western Railway Company would be in the position they are to-day but for the working agreement with the Buenos Ayres and Pacific Company. By this agreement shareholders are guaranteed certain specific dividends based on the distributions made to the Pacific Company's own stockholders. The Preferred Ordinary stock ranks for dividend with the 5% First Preference stock of the Pacific Company, and the Ordinary with the Second Preference stock of the working undertaking. Thus, in respect of the past year the Preferred stock receives its full 5% dividend, and the Ordinary a distribution of £2 16*s*. 6*d*. per cent., or the same as distributed on the second Preference stock of the Pacific Company. Having regard to the heavy falling-off in earnings in the past year, and the increased capital charges which now have to be provided, it is certainly doubtful if such dividends would have been forthcoming had the system been worked on its own. The diminution in receipts was as much as £244,000, or nearly 21%. This bears a heavy proportion to the total, seeing that the earnings of the entire system worked by the Pacific Company were only £342,709, or 7% below those of the preceding year. The line is, unfortunately, particularly susceptible to the prevailing conditions in Argentina, its principal source of revenue being wine and vine products, which are naturally more unfavourably affected by the trade stagnation throughout the Republic than almost any other industry. In spite of the prevailing crisis, however, the prospects of the Cuyo division continue excellent, and the recovery in trade which is slowly setting in will doubtless have a marked effect on the traffic earnings of the line later on.

Mining Topics.

Business during the week in the Mining department has been on a very restricted scale. Price movements have been of but small extent, and pretty well evenly balanced as to rises or falls. The recent disposition of the speculative investor to take an interest in Eastern Rand shares has damped down. There has been a strong market in one or two descriptions, especially for Springs Mines and Van Ryn Deep, the £1 share of the former having risen to over 31*s*. and the "options" to 12*s*., and Van Ryn Deeps to about 2$\frac{13}{16}$*d*. The Modder group have "marked" but seldom; no appreciable changes have taken place, there being a lull in dealing. In general Rand descriptions the favourite continues to be City Deep. The shares of finance groups associated with mining undertakings have tended to droop, and there is also a pause in dealing in diamond descriptions. Though there is not much interest in American mining undertakings on this side there has been a continuance of an active market in New York, where a further improvement in prices has occurred. The quotation of copper has wavered, and a reaction to a slight extent has also occurred, as also in tin, compared with a week ago.

Dividends of 10% upon Ordinary and 8% upon Preference shares have this week been declared by the Pahang Consolidated. The total distributions for the year, which ends July 31, are 15% for the Ordinary and 12% for the Preference, both dividends being records.

Although the Crown Reserve and Coniagas companies have recently passed their dividends, Canadian advices report a more optimistic feeling prevailing as regards the Cobalt region, in view of the improved price of silver. There is also a good deal of optimism respecting the scattered gold areas, and many men of prominence in Canadian mining affairs are investigating the merits of the recently discovered gold regions of Kowkash and elsewhere. English interest in Canadian mining companies is chiefly centred in the Canadian Mining Corporation, whose shares have been in some demand during the past week, and a few of the Porcupine companies, in which region is situate the Hollinger, Vipond, &c, the Hollinger having turned out very rich indeed. Apropos of the Hollinger Company, it is making rapid progress, and is preparing

for an extension of its mill to a considerable extent. Some interest has also been displayed in Associated Gold Mines of West Australia, which is interested in Canadian mining undertakings, chiefly the North Thompson, situated close to the Vipond in the Porcupine district. For the time being Canadians have perforce to finance their own ventures, for, in the circumstances of Treasury restrictions, any introduction of even promising ventures on the London market is out of the question.

Coincident with the War period there has been an augmentation of the native labour force on the Rand. This, in general. We note from the speech of the Chairman of Knight's Deep at the recent meeting that in July 1914 the labour roll was 4,786 "boys." On October 22 this year there were in employ 6,359 "boys." The total of native labourers of the Rand at the end of July 1914 was 167,006, and at the end of October 210,017.

LUIPAARD'S VLEI.

In the vernacular, the Luipaard's Vlei Company had a "rotten time" in the year to June 30, 1915. For four out of twelve months—that is, January, February, March and May—losses on working were shown. In the main this arose from the heavy rainfall. The normal rainfall of three years was shown in a period of five months of the year to June 30, 1915. As an outcome the operations for the year resulted in an average profit of 1*s.* 1*d.* per ton, against 2*s.* 9*d.* per ton for the previous twelve months. The average monthly profit for the whole of 1914-15 was £1,866. The monthly profit, apparently including sundry revenue, in the period since July this year has averaged £4,418. The labour supply this year appears to be distinctly better. The latest advice is that the force of "boys" is 1,968, against an average of 1,528 for 1914-15.

It is difficult to understand the policy of the directors in making a dividend distribution in the circumstances. The operations of the previous year resulted in a surplus clean profit available for dividend of about £20,000. The distribution of a dividend of 5% was resolved upon, but in the War circumstances the distribution was not carried out. This year the corresponding amount of surplus available for dividend was approximately £3,000 only. The amount of £17,700 called for in respect of a dividend of 3¾% means an abstraction of very close to £15,000 out of the balance brought forward, which was £122,880, leaving £108,058 to be carried forward.

Reference is made in the report to the favourable opinion held as to the prospects of opening up the East Battery Reef section. It is to be hoped the expectation will be realised. Contrast of the results of the last two years' working is given below:—

Year to June 30.	1915		1914	
	£	£	£	£
Gross receipts	(218,453 tons) 22,511	(215,980 tons)	21,782	2.1.3

			20,1..	
Surplus or deficit	...Def. 14,822		[illegible]	
Balance brought forward	[illegible]		102,8..	
Balance carried forward	[illegible]		122,88.	

A recasting of the ore reserves at June 30, 1915, gives the quantity fully developed as 702,123 tons, value 22*s.* 6*d.* per ton, and in addition some 60,000 tons of partially developed ore averaging 21*s.* 8*d.* per ton. This contrasts with a total of 666,365 tons a year ago of a value of 23*s.* 2*d.* Information is lacking as to how these ore reserves are based—that is to say, what is the stoping width adopted.

WITWATERSRAND (KNIGHT'S) G. M. COMPANY.

The property of this Company is the freehold of farm Driefontein, Eastern Rand, of an area of 10,335 acres. The Company marked out for itself mynpacht and mining claims, and let off at rentals other portions of its area as mining claims to the May Consolidated, Glencairn, &c., companies.

The retained mining area of the Company is T-shaped; the top of the T is along the course of the reef from east to west, extending in such direction some 7,500 feet. Then, from north to south, on the dip, there is an extent of some 2,000 feet. The reef-bearing portion of this outcrop portion of area has been assumed as about 210 claims. The tailpiece of the T has a width from east to west on the strike of about 1,400 feet, and along the extension of dip of about 8,500 feet: The reef area of this deep-level portion, so far scarcely touched, is in all about 200 claims. Water rights were also acquired, and one or two small separate areas of negligible importance are still owned.

The upper outcrop portion, or top of the T, in the course of operations has been nearly denuded of its ore contents, and the main reliance of the Company for the future is upon the ore contents of the southern dip ground, or tailpiece of the T.

The initial capitalisation of the Company, when formed in 1886, was £219,000, in £10 shares. The vendors received £150,000 in shares and £45,000 in cash. Though only £15,000 was thus left for working capital, the vendors had engaged to provide a battery to cost £21,500. But in those days protection of shareholders' interests in provision of adequate working capital was shockingly ignored. In 1888 the capital was increased to £250,000, and the £10 shares were converted into the denomination of £1. Of the increase of 40,000 £1 shares, 36,000 were disposed of at par and 4,000 at an average of about £2 12*s.* per share.

From 1887 to 1894 intermittent production represented an aggregate of about £123,000 value, of which £55,000 in 1894. In 1895 an episode of a projected increase of capital by 50,000 shares was taken exception to by some of the shareholders, and an injunction was granted by the courts, a "scandal" being caused by the so-called "guarantee" arrangements. All this is ancient history, and we merely refer to it before we deal with the position as to capital account as from 1896, when the issued capital of the Company was £250,000, in £1 shares. Subsequent issues have been as under:—

March 1896. Capital increased to £325,000.

	Shares
Disposed of at £4 per share	58,683
,, ,, (about) £7 15*s.* per share... ...	3,500
,, ,, at £4 12*s.* 3*d.* per share	12,817

April 1898. Capital increased to £375,000.

Disposed of at £6 per share	27,083
(Guarantors a year's option to take 22,917 shares at £7, which was not exercised.)	
Feb. 1902: Disposed of at £7 10*s.* per share ...	22,917

June 1904. Capital increased to £425,000.

Disposed of at £5 10*s.* per share	37,500
,, ,, £5 ,, ,, ...	12,500

May 1913. Capital increased to £475,000.

Disposed of at £3 10*s.* per share	42,500
Commission on shares	2,125
Total shares now in issue	469 625
In reserve	5,375
Authorised capital	475,000

In all about £850,000 was secured from premiums on share issues, and this amount, also nearly £100,000 taken from profits, was applied to writing off shaft sinking, [illegible] balance

sheet now the property, permanent works, buildings, and plant stand at about £417,000, the former item of development (ore reserves) disappearing in 1907 through it being by then written off.

In the early days many difficulties were brought about through the operations quite at the north leading to the discovery that there had been a first and second upthrow of reef, breaking off the continuity, and necessitating modification of working. Inasmuch as the outcrop portion of the property, however, is now nearly denuded of its ore contents, all is now comparatively plain sailing. In the untouched dip ground of the reef series two portions, known as the Main Reef Leader and the South Reef—more particularly the South Reef—are the main reliance of the future. The two reefs are in juxtaposition to one another, oftentimes being extracted together.

Late in 1910 it was decided to effect developments in the tail of the T-shaped property. By October 1912 the vertical shaft, equipped with a headgear of 105 feet high, intersected reef at a depth of 2,232 feet. At the bottom of the vertical shaft a new incline shaft, not to be confused with the incline shafts in the region of the top of the T-shaped area, is being sunk. The incline shafts of the upper part of the property have been discontinued at the 14th level, and the opening up of ground between the bottom of the new vertical shaft and the 14th level above will be effected by crosscut from the vertical shaft. At the commencement of driving, about January 1913, in the region of the vertical shaft the showings were reported as about 33*s*. 2*d*. assay value, and in a winze showed about 12 dwt. over 61 inches thickness of reef matter. The labour troubles of July 1913 and January 1914 caused suspension for a while of shaft sinking, but development operations were resumed February 1914, and the Chairman, at the meeting held May 1914, said:—

"From the information that we have secured we are satisfied that the area north of the vertical shaft contains reefs of considerable width and excellent value. To the south of the vertical shaft the Witwatersrand Deep Company has exposed satisfactory values in their development drives in the direction of our boundary, and these results would seem to indicate that the mine (Knight's), for a good distance south of the vertical shaft, will be of good grade."

It would be superfluous to go into detail of operations prior to recent years, but in general terms we may mention that from the era of intermittent crushings to the end of 1908 an aggregate of some 2,122,000 tons gave a yield of about £2,950,000 value of gold, say, in round figures, 28*s*. per ton. Of profit results to the end of 1908, nine half-yearly distributions were effected, the first two in 1898 and December 1905, and since regularly half-yearly. The aggregate of the dividends distributed in the period was £554,375. The detail of results of 1909 and since is set out below:—

Year to Dec. 31	Tons Milled	Yield per Ton	Gross Return	Expenses	Profit
			£	£	£
1909	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

Dividends ...(50%)	234,812	(50%)	234,812	
	280,985		261,603	
Surplus	14,638		7,510	
Development [illegible]	Cr. 1,220		–	
Brought forward	67,814		60,304	
Carried forward	83,672		67,814	

The following is an estimate of the results for year to December 31, 1915:—

Estimate of **1915**.

	£	Per Ton
[illegible]	624,000	24/8
[illegible]	347,000	13/8
Mine profit	277,000	11/0
Rental, &c.	25,000	
	302,000	
Appropriations—		
Taxes	£28,000	
[illegible]	8,000	
[illegible]	16,000	
Available for [illegible]	250,000	

50% Dividends (of which 25% declared June 1915) on £469,625 capital calls for £234,812.

On [illegible] there would be about £25,000 surplus after provision of 50% dividend for 1915.

In our "Mines of Africa, 1914-15," page 631, chapter and verse is given for the estimate set out therein of the ore contents in the upper portion of the T-shaped area. This was based upon a 40 degrees dip, 5 feet of stoping, and a 20% allowance for faults, sorting, &c., with outcome of adoption of a net 30,000 mill tons per reef claim. Allowing for what has been used to December 31, 1914, we estimate that approximately 1,200,000 tons of ore will remain in this outcrop region. In the tailpiece of the T, which, as mentioned, has a strike length of some 1,400 feet and of some 8,500 feet on the dip, such distances aggregate approximately 180 claims. To such has to be added 20 claims retained by the Company of the area under the chemical works to the east of the tailpiece, making the southern dip area 200 claims. Applying 30,000 mill tons per claim to such area we arrive at an additional 6,000,000 tons of ore assumed to exist. Remaining ore in the mine is to be extracted by means of the new vertical shaft, which is connected by tramway to the mill, lying to the north, where the ore is dealt with. The position of future ore supply [illegible]:—

	Mill Tons
Outcrop area, ore remaining Jan. 1, 1915	1,200,000
Southern dip area, 200 claims at 30,000 mill tons per claim	6,000,000
	7,200,000

On the [illegible] tons [illegible] the approximate present rate of output, this would represent, say, 14 or 15 years' life remaining.

Early in 1913 the then life was estimated as 15 to 20 years for all the remaining area of the mine.

According to official statements the ore reserve at December 31 in each of the following years were as [illegible]:—

1914		1913		1912	
Milling Tons	Recovery Value	Milling Tons	Recovery Value	Milling Tons	Recovery Value
1,221,879	28/0	1,225,688	27.2	1,331,540	25/11

It will be noted from the reserves that, allowing for the quantity of ore used, the amount of reserves left in sight at end of each year has varied but little. Possibly, with labour more abundant, as it is now reported to be, more effort will be made in the future to effect developments ahead of mill requirements. [illegible] reserves

to September 30, 1915, had been augmented since December 31, 1914, by nearly 60,000 milling tons.

If, as is expected, developments in the tailpiece continue as good as heretofore they have been reported, there is quite a probability that the recent rate of dividend of 50% per annum will be maintained. But in the circumstances of uncertainty it is desirable to be cautious in estimating the market value of the shares, and we will estimate the value of the share for 15 years' life upon the basis of dividends of 40% and also 50%.

Approximate present value of share to give the investor an income of 10% and return of capital at end of 15 years' life by investing excess dividends at 5%:—

Average dividend	**40%**	**50%**
Present value of share (say) ...	**2¾**	**3½**

The present market price is 2⅞.

BROKEN HILL PROPRIETARY.

THE half-year which ends this month will be the first complete financial period in which the Broken Hill Proprietary Company's new iron and steel works will have been in operation, and it is not unnatural, therefore, to look forward with some eagerness to the results that will be shown when the accounts come to be issued. In the half-year to May 31 last the iron and steel works were started up, but only preliminary operations were in progress and the accounts showed expenditure £54,000 in excess of receipts from this department. The Company, however, was able to report very satisfactory profits earned from its other varied activities, the high prices of lead and spelter helping considerably. Briefly speaking, in addition to the iron and steel works new departure, the operations of the Company consist of obtaining lead-silver-zinc ore from its own Broken Hill mine—which, it must be noted, is gradually reaching the stage of exhaustion—and treating this ore, together with accumulated tailings residues, in a concentration mill for the production of lead concentrates. The lead concentrates, and other material, mostly purchased, are passed through smelters which produce lead bullion, and the lead bullion is refined for fine silver and soft lead, both easily marketable. In addition, tailings containing zinc are treated in a concentration plant which produces zinc concentrates. The Company has a zinc smelter for the further treatment of zinc concentrates, but it is not of sufficient capacity to deal with the whole of the Company's output, and consequently a large proportion has to be sold and shipped abroad. On the outbreak of the War the chief markets for zinc concentrates on the Continent were rendered unavailable, but lately the Company has been able to dispose of considerable quantities of the product to American smelters, and consequently increased revenue from this connection should be shown in forthcoming accounts.

The progress of the Company in recent years in the matter of output and treatment of its own ores and tailings will be seen below. We do not give the figures of refinery outputs, because since the War commenced the Company has treated much larger quantities of material for other Broken Hill concerns. The average prices of lead and spelter (zinc) for the half-years and the gross profit obtained before allowance for depreciation will be noted:—

	—Ore-dressing Mills—			—Zinc Concentration—

* After deduction of £54,181, deficit on construction of iron and steel works.

The Company's issued capital is £472,402, in 8s. shares, and there are now outstanding £570,000 of 6% Debentures out of a total of £600,000 issued for the purpose of financing the construction of the new iron and steel works. Since its formation in 1885 the dividends paid have aggregated £10,756,000 in cash, but, despite the apparent largeness of the sum distributed, actually the dividend payments in relation to profits earned have been very conservative. In recent years especially has this been the case, as will be seen from the following:—

	Half-Years ended—			
	May 31, 1915	Nov. 30, 1914	May 31, 1914	Nov. 30, 1913
	£	£	£	£
Gross profit	223,312	144,847	165,293	152,768
Depreciation written off	27,084	19,236	14,578	8,994
	196,228	125,611	150,714	143,774
Dividends paid	118,101 (25%)	59,050 (12½%)	113,727 (25%)	104,033 (25%)
Balance profit	78,127	66,561	36,987	39,741
Brought forward	984,682	918,121	881,134	866,393
Carried forward	1,062,809	984,682	918,121	881,134
Capital expenditure	—	318,586	520,228	150,795
Surplus liquid assets	646,319	741,756	468,482	888,117

A very considerable proportion of the large amount figuring as carried forward is employed in the Company's business. Large sums have been used out of profits for the purpose of the new iron and steel works, in addition to the fresh issues of share and Debenture capital. Nevertheless, at May 31, 1915, the surplus liquid assets amounted to some £646,000.

To date the iron and steel works have cost about £1,500,000. Their output capacity is at present 125,000 tons of steel per annum, but this is to be increased to 170,000 tons, the additions to plant for the purpose being expected to cost £300,000, making the total expenditure on the enterprise £1,800,000. By the recent sale of its Port Pirie smelting works for £300,000 in cash and £200,000 in shares the Company will obtain additional funds which will pretty well cover the extra cost of extending the iron and steel works. At the end of August contracts had been entered into with the various Australian Governments for the supply of 106,000 tons of steel rails and the outlook for the enterprise seems to be bright, the various operations having been commenced and continued without a hitch. Moreover, as the Company owns very extensive iron-bearing properties of extremely rich character, large profits from the business are looked for, notwithstanding the high rate of wages required to be paid in Australia. In addition to the probably increasing revenue from the new works, the older part of the business—viz., silver, lead and zinc production—should yield substantial profits for many years yet. The immediate future in this respect is very beneficially influenced by the continuance of high prices of lead and zinc.

For so great an enterprise the issued share capital of £472,402 is distinctly small; and as regards the moderate Debentures outstanding at £570,000, this will be gradually paid off. The price of the 8s. shares is 15s. and the yield shown on the present rate of dividends works out at about 9%.

British Broken Hill.—This Company's mine remains closed down owing to the fact that its ore contracts suspended by the war not cancelled, with German buyers of lead and zinc concentrates. The Australian Government has passed an Act which declares as invalid all Australian contracts with the enemy, but it is doubted whether this Act would apply to English companies such as the Broken Hill [illegible] Broken Hill [illegible] Australian Government [illegible] through the question was [illegible] consideration of the Board of Trade for some considerable time, no decisive action has been taken, and until it is the Broken [illegible] Hill [illegible]

On the other hand, unhappily, expenditure on maintaining the mine continues. The amount expended on this account for the half-year to June 30, 1915, was £8,825. In addition, office charges absorbed £4,864—in which connection we think the directors' fees at rate of about £2,200 a year might in the circumstances be reduced. The net depletion of the Company's resources during the half-year amounts to £13,262. The balance sheet at June 30 shows the surplus liquid assets, irrespective of concentrates on hand, at present unsaleable, to be less than £5,000, and it is to be feared that continuance of the present state of things will result in the financial position becoming steadily, if not rapidly, impaired. The £1 shares are quoted at about 19*s*.

North Broken Hill.—We recently referred to the dividend of 1*s*. per share declared by the North Broken Hill Company, and this week a further dividend of a shilling, with a bonus of a shilling, has been announced, making 15% so far for the current half-year. This compares with 5% paid for the June half of 1915, nothing for the December half of 1914, and 25% for the June half of 1914.

Kyshtim.—Despite the war influences the output of refined copper by the Kyshtim Corporation is well maintained, aggregating approximately 6,150 tons for nine months of 1915, against 5,830 tons for corresponding period of 1914. The amount of output for the last three months of 1914 was cut down to about 1,617 tons. At the recent meeting, the Chairman stated that the capacity of the plant is now equivalent to an output of 10,000 tons a year. In present circumstances full capacity cannot be utilised, but all things considered the output is well maintained.

Nechi Mines.—Capital £140,000, in 140,000 Preference and 140,000 Ordinary shares of 10*s*. each. The whole of the Ordinary shares are held by the Oroville Dredging Company, Limited.

Period 1915	Cubic Yards Treated	Value Per Cubic Yard $	Value Per Cubic Yard Cents	Price Pref. Shares end of Period
14 days to Nov. 1 ..	77 322	16,715	21.6	12 9*

* 9*s* paid.

The return to November 1 stated that cabled advices indicate the dredge will not have worked its way into the rich ground for about a couple of months.

MOUNT LYELL.

The high price ruling for copper exerted a very beneficial influence upon the operating results of the half-year to September 30 of this Australian copper-mining Company, its earnings being the highest obtained since 1907, in the second half of which year a record working profit of £311,301 was reported in respect of 3,796 tons of refined copper sold at an average price of £106 9*s*. 3*d*. per ton. The dividends paid during that half-year totalled 17½%.

In the half-year to September 30, 1915, 4,053 tons of blister copper, including 4,009 tons of refined copper, 5,018 oz. of gold and 219,800 oz. of silver, were produced at a cost of 18*s*. 7*d*. per ton of ore treated. The costs in 1907 period were 14*s*. 5*d*. per ton of ore. The refined copper sold amounted to 3,366 tons at an average price of £87 5*s*. 0*d*. per ton, and the working profit for the period amounted to about £204,000. This is a great improvement on the previous half-year's earnings, but still a very conservative policy has been adopted in the matter of dividend distribution. After deduction of about £64,000 for general office charges, prospecting, depreciation and taxes, the net profit for the past half-year was £139,071, out of which a dividend of 5% has been paid absorbing £64,460, the balance of £74,611 being added to the carry-forward, increasing the amount to about £670,000. The half-yearly dividend has now been raised, a distribution of 6¼% having recently been declared payable on December 20. At the end of September the liquid assets in excess of liabilities amounted to £469,031, in contrast with £344,895 six months previously—a very strong financial position in relation to the issued capital of £1,289,195. A contrast of the profits and allocations of the past five half-years is shown below:—

	Half-Years to— Sep. 30, 1915	Mar. 31, 1915	Sep. 30, 1914	Mar. 31, 1914	Sep. 30, 1913

* Part of the product sold in one half-year is produced in the preceding period.

† The dividends, though paid in the half-year shown, are declared in respect of the profits of the preceding period.

(*a*) Fire expenses written off out of reserve fund in second half of 1913.

(*b*) Estimates.

The ore reserves at September 30, 1915, are reported as 2,764,689 tons, equal to nearly eight years' supply for the recent rate of ore consumption. This figure, it is officially stated, does not take credit for important additions disclosed by development work during the past half-year at the North Mount Lyell mine, where only last week, according to a cable advice, a very good discovery of rich ore at the bottom level occurred, a cross-cut disclosing 57 feet of continuously rich ore.

As regards the future, in view of the probable maintenance of a high price of copper during the continuance of the War, it looks as if shareholders can anticipate with some certainty the resumption of bonus payments as in the palmy days of 1906-8. The past year's net profit was sufficient to enable the payment of more than 10% on the capital, though only 5% was actually distributed. At their present price of 24*s*. 6*d*. *cum* 1*s*. 3*d*. dividend, the £1 shares certainly do not appear to be over-valued; the yield on the basis of 6¼% half-yearly dividends being over 10%.

* Including revenue from Railway and Superphosphate Works.
Present price of shares, 24,6.

According to mail advices from Australia, the Mount Lyell has obtained options over the properties of the Tasmanian Copper Company, Hercules Gold and Silver Mining Company, and the Primrose Mining Company. The option is for nine months, and gives the Mount Lyell the right to absorb the three properties by giving 245,000 of its own shares, as to 100,000 shares to the Tasmanian Company, 120,000 shares to the Hercules and 25,000 shares to the Primrose. Under this arrangement the Mount Lyell would have to discharge the liabilities of the Hercules Company, not exceeding £10,000, and of the Tasmanian Copper Company, not exceeding £30,000. Alternatively the Mount Lyell may form a separate company, with a

share capital of £650,000 and £240,000 of Debentures, distributed as follows:—

	New Co.'s Shares.
To Hercules Co.	120,000
To Primrose Co.	25,000
To Tasmanian Copper Co.	100,000
Commission to Vendor Lyell	100,000
In Reserve	305,000
Total	650,000

	Debentures £
To provide working capital	200,000
To discharge liabilities of Hercules and Tasmanian cos.	40,000
Total	240,000

Lonely Reef.—In the report for the year 1914 mention was made that there had been a marked drop in the grade of the ore at the 10th and 11th levels, and a commencement of development at the 12th level was in low grade. It was added that since the end of the year a marked improvement had been shown in the grade at the 12th level, but, consequent on poor showings in levels above, the ore reserves brought into sight had considerably fallen off. During 1915 the quarterly reports show that developments effected at the 12th and 13th levels have shown distinct improvement over the two levels above, and cable advice was received November 1 of the encountering of high-grade ore at the 15th level. No mention having been made of the 14th level appears to indicate that a dash has been made to ascertain the nature of the reef formation in depth, deferring the opening up of the 14th level. The June quarterly statement set out that the 14th and 15th levels would be attacked in the last quarter of the year. Those shareholders who have the last report will be able, by filling in for themselves development work referred to by the quarterly statements, to appreciate the position. To September 30 an aggregate, north and south, of some 400 feet had been driven upon at the 13th level, and to the south, the direction of the pitch of the chute, the ore improved to approximately an ounce to the ton, or nearly double what it was to the north. A cable November 1 reports that 10 feet driven to the south and 5 feet to the north at the 15th level indicated as under: —

At	5 feet south	...	...	1 oz.	3 dwt.	over	53	inches

MEETING EXPENDITURE.

AT HOME AND ABROAD.

THE export of gold this week has not been nearly as heavy as last week, and the gold shipped abroad has been provided by gold received from abroad. Moreover, the American exchange has been firmly maintained, and is now in the neighbourhood of 4.70, or at a discount of only about 3¼%. The strength of the American exchange is the result of the recent Government Loan in the United States, which is now available for the payment of Government purchases in that country, and the creation of a banking credit in New York for account of British bankers for a much larger amount than the figure we stated last week. The Committee in charge of the London end of the transaction consists of Lord Cunliffe, Sir Edward Holden, and Sir Felix Schuster; while the New York Committee comprises Messrs. Frank A. Vanderlip, National City Bank (chairman); James S. Alexander, National Bank of Commerce; Charles H. Sabin, Guaranty Trust Company; Seward Prosser, Bankers' Trust Company; George M. Reynolds, Continental and Commercial Bank of Chicago; Robert Y. Hebden, New York agent for the Bank of Montreal; William H. Porter, J. P. Morgan and Company; John E. Gardin, National City Bank; and Frederick I. Kent, Bankers' Trust Company. This banking credit is to be supplanted by, or rather is in anticipation of, the formation of a much more extensive credit based upon the sale or deposit of a large quantity of American securities. It is hoped that the amount of this latter credit will eventually reach a very large sum.

The preliminary steps to obtain the deposit of the necessary securities have already been taken by the Chancellor of the Exchequer. Conferences are reported to have been held on Friday of last week between the Chancellor of the Exchequer and representatives of British insurance offices, and also with representatives of British trust companies having substantial holdings of American securities. The proposals put before these conferences have not been officially announced, but it is understood that holders of American securities who agree to lend them will receive a certificate of deposit carrying with it interest at the rate of ½% per annum over and above the rate of interest given by the securities deposited. At any time holders would have the right to sell their securities, and the certificates of deposit would also be negotiable. These terms are so very attractive that private investors who own the greater part of the American securities in this country will doubtless take immediate advantage of any such offer that may be made to lend their securities under Government guarantee. Of course, it will be obvious to everyone that the sale of American securities by holders for the purpose of adjusting the exchange is much to be preferred to the deposit of securities with American bankers as collateral for loans. In the latter case the money is obtained for the purpose of meeting the exchange situation at once and without any arrangement with bankers becoming necessary. Moreover, when securities are sold they are, generally speaking, transferred from British investors to American investors, whose power to purchase them is practically unlimited. Roughly speaking, the power of American investors to buy securities, apart altogether from their power to invest in other forms of property, is anything from £600,000,000 to £800,000,000 a year, and were British investors to sell some of their securities this great fund would be tapped. When, however, the securities are used as collateral for banking loans the funds available for such a purpose are limited by the amount of free money that American bankers possess. Banking deposits in the United States grow much more quickly than in this country, but in comparison with the investing fund of the American nation the banking fund is a relatively insignificant sum, and, in carrying out a transaction where perhaps a hundred millions sterling or even more is involved, it would be much better to obtain the money of American investors than the funds of American bankers. Of course whatever method is the more practicable must be adopted, but we would ask British holders of American securities to note that in selling part of their holding at the present time they will render valuable service to their country by providing the means of paying for the great quantities of produce and munitions which this nation and its Allies are buying from the United States.

When the proposals which the Chancellor of the Exchequer has to make to investors, insurance companies, trust companies, and others are matured it is probable they will embrace two methods of procedure: (1) the deposit of securities to be used as collateral for a banking loan from the United States; and (2) the sale of securities for the purpose of adjusting the exchange. We hope that the patriotism of investors will induce them to provide the Chancellor with all the securities he needs, and that they will realise that of the two methods the sale of securities will be of much greater benefit to the nation than the loan of securities.

There has been a great deal of discussion as to how many American securities we still hold in this country, but whether the smaller or the larger estimates are accepted it is evident that we hold sufficient to pay for all the goods we may buy from the United States for two or three years, that is if British investors will consent to lend or to sell their securities for the purpose of meeting the country's payments.

Another matter with indirect bearings upon the exchange situation, but nevertheless one of great fundamental importance, is the attention which the Chancellor of the Exchequer is giving to the matter of national thrift, and the endeavour he is making to induce all classes of the community to curtail their expenditures and to provide the money needed for the War in much larger measure out of income. In announcing that a sum of £5,000,000 has been subscribed for the last War Loan through the sale of scrip vouchers and scrip certificates, which arrangement comes to an end on December 1, the Chancellor of the Exchequer referred to a plan that is now under consideration for the issue of bonds in multiples of £1, carrying interest at 5% cashable on demand at face value at any time. In order, however, to induce holders not to cash the bonds unless absolutely necessary, it was proposed that they should carry no interest for the first six months. This plan is not final, and the Chancellor of the Exchequer merely announced it in order to invite public discussion. Although, as far as we can gather, the plan has not been received with any great amount of warmth, as the absence of interest for the first six months seems likely to make the bonds not sufficiently attractive to the working classes, nevertheless, the important matter is that the question is now under discussion

of discovering a method of inducing the working classes, who are now receiving unusually high wages, to set aside part of their income by subscribing for bonds, and thus to provide a portion of the great sum of money needed for the War. If the present proposal should prove to be not quite generous enough, the discussion which the Chancellor has invited will probably bring other proposals which will be acceptable to the working classes. Therefore we may hope that in future wage-earners will make much greater provision for themselves against the period of depression that will come when the War is over, and the nation has again to live well within its income. By doing this they will contribute a much larger sum to the War expenditures. Moreover, in proportion as wage-earners and others keep down their expenditures, imports will be reduced, exports will increase, and the trade balance will tend to adjustment.

Beyond all these matters, which indicate clearly that the Chancellor of the Exchequer and the Government are devoting themselves earnestly to the question of providing the money needed for the conduct of the War and the adjustment of the exchanges, the announcement has been made that a National Labour Conference on economy will be held next Wednesday between representatives of the Government and the wage-earners of the country, and that at this Conference Mr. Asquith will deal with the general situation, and Mr. McKenna with the purely financial side of economy and will ask the assistance of the Union to forward his War Loan Savings campaign, and that Mr. Runciman will discuss the wage problem as well as the important question of fixing food prices.

We attach a great deal of importance to this Conference, which will give the Government the opportunity not only of addressing labour but the country on matters of crucial importance. It is evident that a great many people realise the nature of the work that has to be done, and are doing their very best to assist the nation to perform that work. It is also evident that vast numbers of persons of all classes and ranks are paying very little attention to the financial and economic problems of the country, and by their heedlessness are not only doing nothing to assist their country to meet its great war expenses, but are diminishing the power to make these expenditures, by unnecessary outlays of all kinds and descriptions, outlays which add to the aggregate consumption of the country and help to bring about our great imports.

The Prime Minister and the Chancellor of the Exchequer have again and again made it clear that not only can the country not be as extravagant as usual, but must be much less extravagant, and the latter, in placing before the House this week his suggestion for inducing the working classes to save, made the following statement, which should be read and digested by every citizen:—

"Extravagant expenditure in any class cannot be tolerated at the present time, and this truth must be appreciated by the public. If the community will save all that part of the national income which need not be spent, such saving will strengthen our national finances during the War, and will benefit the individual after the War and during the possible stress of a return to normal conditions. Economy in expenditure is vitally necessary. The nation must be made to understand this, and a suitable instrument must be devised by means of which we may avail ourselves of the nation's savings."

Thus the course of events throughout the past week—the negotiations for the acquisition of a large amount of American securities for exchange purposes, the proposed plan for the issue of £1 bonds, and the arrangements for a National Labour Conference at which leading Ministers will speak—has been in the direction of assisting the nation to meet its great War expenses, and at the same time to adjust its foreign trade balance.

THE FRENCH LOAN.

A PROSPECTUS has been issued this week of the new French loan for an indefinite amount in the form of 5% Perpetual Rentes. The price of issue is 88, and the loan is made free of all taxation. Inasmuch as the French exchange upon London is now 27.80½, against the normal 25.22½, the net return to English holders is much greater than the nominal return. Roughly speaking, the price in sovereigns is about 80%, and the yield afforded is about 6¼%. Of course this yield is based on the expectation that eventually the French exchange will return to par, and that interest on the new loan will be paid at an exchange rate of about 25.22½. The issue of this loan is another indication of the financial recovery of France since the early days of the War. At the beginning of the War the rapid advance of the German Army on Paris threw the country into confusion, and it was only possible to finance the Governmental expenditures by loans from the Bank of France and the issue of Bank of France Notes. As time went on, however, and the invader was driven back, it became possible to issue short-term obligations, called Obligation de la Défense Nationale and Bons de la Défense Nationale. Now the improvement in financial conditions is so great that the Government is able to make a great loan in 5% Perpetual Rentes. How much money will be raised by the loan cannot, of course, be predicted, but it is evident that the sum will be very large, apart altogether from the amount issued for conversion purposes. Up to the present time the money borrowed by France for the War has been about £850,000,000. The amount of the existing War indebtedness is as follows:—

War Debt of France.

	Francs.
Advances by the Bank of France	7,300,000,000
French Treasury bonds discounted by the Bank of France for advances by the State to foreign Governments	560,000,000
3½% Loan of July 1914	462,263,000
Bons de la Defense Nationale	8,353,000,000
Obligation de la Defense Nationale	3,659,000,000
Treasury Bills placed abroad:	
England	1,028,967,000
United States	135,716,000
Anglo-French Loan in U.S.	1,250,000,000
Total	22,748,955,000

CANADIAN LOAN.

THE prospectus has been issued this week of Canada's first War Loan, the amount of which is for $50,000,000, bearing interest at 5% and issued at 97½%. The subscriptions already received reach a very large total, and it is understood that the loan has been fully subscribed. The issue of this loan indicates the very great change that has come over the financial condition of Canada during the past year, and reflects the wealth accruing to the country from the bumper crops of this year. In our issue of November 6 we showed that in the current season Canada will have a very large sum of money available for purposes other than normal, and pointed out that possibly the country would be able to buy back some of its own securities from this country. If, however, the greater wealth of Canada enables the country to meet a large part, if not the whole, of its War expenses, the work effected in assisting the Empire at the present time will be equally noteworthy as it will mean that Great Britain will not require to lend as much money to its Colonies for War purposes as was expected. There is no doubt whatever that the loan will be a very great success, and probably when the whole of the money has been expended Canada will be in a position to raise a new loan in order to meet further expenditures. No greater object-lesson could be given concerning the possibilities of Canada which is now able to raise a substantial sum of money for War purposes, although a large part of the capital it has spent upon its development in recent years has yet to become productive.

THE BRITISH EMPIRE'S FIGHTING STRENGTH.

Probably every General Staff in Europe, and we may add America, knows to a nicety the existing strength of the British Army. But it is deemed wise by the gentlemen who control our affairs at present to keep concealed from the British public what is known to all foreign Governments. So long as they hold that opinion, of course, it is proper for British journalists to accept the fiction, and to pretend that nobody knows what the actual strength of the British Army is. At all events, we deem ourselves bound not to proclaim what the Government tells us it wishes not to be told. But we may point out certain things which Ministers have occasionally let out. To begin with, it will be recollected that the actual force with the Colours just before hostilities began, including all the garrisons of every kind, did not quite amount to 200,000 men. But in a recent speech Mr. Asquith himself told us that whereas we were able to send to the relief of Belgium when war broke out no more than six divisions of infantry and two of cavalry, we have, or we had when he was speaking, over a million of men in France and Belgium. Furthermore, everybody who walks about and keeps his eyes and his ears open knows that all over the United Kingdom there are immense masses of men actually under training. In addition to this, it is matter of common knowledge that there is a large British as well as French force attempting to force the Dardanelles; that there is a British expedition assisting the French in defending Serbia; that there is a British Army which has just won a brilliant victory near Baghdad; that, in addition, there is a large garrison both in Egypt and in India; and, lastly, that every position of any importance, like Gibraltar and Malta, is well and fully garrisoned. Over and above all this, we are hurrying on further enlistment as if we believed that we were still much short of the Army we desired to put in the field. We are, then, not in any way telling tales to the enemy when we say that our land forces of all kinds at home and abroad at the present time must number something between three and four millions. Practically all these, except the 200,000 Regulars and their reserves which existed in peace time, have been raised within the last 16 months. Furthermore, nearly four millions of men have been enrolled, equipped, and trained in 16 months without the application of force in any form. It is an exploit which none of us would have believed possible two years ago; and it is a feat which, say what they may, our friends and our enemies alike are astounded to see accomplished. Mainly, the vast armed forces now being assembled have been drawn from the white population of the Empire. We are aware of the splendid service that has been rendered by our Indian troops. But India has not been drawn upon to anything like the extent that she might be, nay, more, to anything like the extent she wished to be. The ruling princes, the great nobles, the local governing bodies have all volunteered help in any form that might be desirable. And scarcely any acceptance has followed. Indian troops are doing splendid service in India, in Mesopotamia, in Egypt, and elsewhere. But the little use that has been made of Indian loyalty is one of the amazing things which make us doubt whether our rulers have any real conception of the nature of our Empire or any clear idea of how audacious enemies can, and ought to be, dealt with.

According to the Census of 1911, the population of India amounted to 315 millions. Now, if we were to accept in their literal sense the offers made by the ruling princes and great feudatories of India and call for only 1% of the population, that is to say, one man of proper fighting physical qualities out of every hundred of the total population, we should get an army of 3,150,000. There are military writers of considerable reputation who maintain that Germany has raised 10 millions of men. According to the German Census of the other day, her population was slightly under 65 millions. Therefore, if Germany enrolled 10 millions of men in her Army she took very nearly two men out of every thirteen men, women, and children in the community. Whereas if India furnished only one man in every hundred men, women, and children she would give us 3,150,000, which, added to the armies we have at present, would very nearly raise the whole British land forces to the level of the entire French land forces, though France is fighting for her very life, and we are free even from the fear of an enemy landing on our shores. We do not ourselves believe that Germany ever had 10 millions of men under arms, or that, in fact, she could keep 10 millions of men for any length of time employed in pure soldiering. What is the most striking feature of the present War is that Germany not only had been working as hard as she could ever since 1870 in preparation for this War, but that she has since the War itself began shown that she had scarcely reduced by a single individual the number of men employed in production for the War. She has been able to carry armies from France to Poland and back again as often as she pleased, and in as large numbers as she dared, showing that not only her railway staff was absolutely complete, but that the production of coal was carried on as largely and as fully as in peace time. Furthermore, she has from time to time astonished the world by such new modes of warfare as asphyxiating gas, showing that all her engineering works and chemical works are as fully manned as ever. In short, Germany has surprised careful observers not by her strategy, nor even by the valour of her soldiers, but by the completeness with which she has carried on every kind of productive industry that was required for the most efficient employment of her armies. That is the really striking thing in the German procedure. No doubt the fact that she occupied Belgium and so large a part of France enabled her to compel her conquered enemies to work for her. But even Germany, which the professors used to hold up to the world as a general example of efficiency—even Germany, we say, cannot make unskilled men do the work of skilled men. Germany employed French and Belgians in certain ways, but certainly not in the skilled branches of her Army and those that supply her Army.

In all reasonable probability Germany has never had more than seven millions, or at the outside eight millions, of men in her armies. Yet Mr. Bonar Law told us the other day that France has seven millions at the present time. To all intents and purposes, then, France, England, and Italy have considerably more men under arms than the enemy. We are leaving entirely out of account the Russians, with their 21½ millions of men capable of bearing arms. We are, then, largely superior in numbers to our enemy, and when the time comes that fact will be shown in the most striking way. But hitherto, for reasons which need not be gone into here, we have not been in a position to use these numbers. It is probable that during the winter very little may be done. With common sense and a little strategic ability we ought to be able to crush Bulgaria and to settle definitely the Austro-German armies sent to invade Serbia. Then we ought to be able to induce Roumania and Greece to join with us and to capture both Buda-Pesth and Vienna. In that case, there would remain for Russia and England practically only the reconquest of Poland and the capture of Constantinople. We have shown that one man out of every 100 men, women, and children raised in India would give us an army of 3,150,000 men, which would be far more than would be required. Even half that force would probably dispose of the Turks and all their pretensions. There is a school amongst us which nothing ever yet has taught, and which, apparently is incapable of being taught by any amount of experience. We have had fears of [illegible]

from time out of mind whenever we had an enemy abroad. And now we find Ireland fighting by our side loyally and with enthusiasm. Only about a dozen years ago we were actually fighting the South African Republics, and now South Africa is as proud of her position in the Empire, and as ready to fight the Empire's battles, as even the British themselves. Yet there are people who shake their heads and look scared when you talk of employing over three millions of Indians in fighting the battles of the Empire. As a real matter of fact, there would be no more certain way of convincing the Indians that we have taken them for good and for evil as our partners, and that the Empire and its advantages will be theirs as well as ours.

GREECE AND THE WAR.

Neither the Note addressed by the Entente Allies to Greece nor the reply of the latter has, as we write, been published. Therefore the less said about it the better, since we are bound to take for granted that the Powers have reasons for not making known the whole correspondence. There is less need for comment since we are assured that Greece has conceded all the demands of the Powers. If so, we are bound to presume that she has done everything that is really necessary. For it is hardly conceivable that the Powers would have asked less than is requisite. Whether Greece takes part in the conflict is a matter of comparatively small importance, since our readers are well aware that the Entente Allies are numerically so immensely stronger than their enemies that there can be no difficulty on their part in preparing such an expedition to defend Serbia; or, if that has come too late, for revenging Serbia and clearing the enemy out of her territory as may be needed. On the other hand, it would be vain to deny that the assistance both of Greece and of Roumania would greatly shorten the War. Unfortunately, Bulgaria is practically a bulwark against the attack upon the Turks. A considerable Russian Army, we are told, is assembled to protect Serbia, but Roumania blocks the way. Similarly time has been spent by the Entente Allies in obtaining the concessions demanded from Greece. If, then, Roumania and Greece were to allow the Allies to pass through their territories, and still better if they were to assist the Allies in compelling Bulgaria to lay down her arms and in subduing the Turks, we might hope that the War would very quickly come to an end. Still, as we have said, the matter is of comparatively small importance since it is only now that the British Empire is really prepared for seriously engaging in the War. France is at the very zenith of her fighting strength. Russia is only now obtaining a sufficient supply of munitions. And Italy, until the present moment, has had a very serious task in the Trentino. We are now, therefore, all in a position to tackle our difficulties seriously, and it is really a matter of greater concern for the Balkan Powers themselves than for the Entente Allies whether they join or not.

Notwithstanding the efforts of the German propagandists and the unwise partisanship of certain parties among ourselves, Germany and Austria-Hungary are but very ill-provided for a prolongation of the War. Without entering upon a detailed estimate of the strength of their present armies, it is enough to remind the reader that the two Central European Empires are fighting not only in Belgium and in France, but also in Galicia, in Russian Poland, and now in the Balkans. The enormous extent of front which they are called upon thus to hold against attack is almost unprecedented. They have called up, or are calling up, all their reserves of every kind. They have a serious Russian winter to face, and, in contradistinction to all this, the British Empire and Russia are now for the first time becoming fully prepared. Within sixteen months the British Government has enrolled, armed, and trained something between three and four millions of men to call upon. And Italy, hitherto having confined herself to her own frontiers, is now about to extend her operations. Considering the position in which our enemies stand and the advantages which we, on the other hand, possess, it is clear that the longer the struggle goes on the more absolutely and literally ruinous will it be for our enemies. In saying this, we are indulging in no braggadocio. We do not in the least deny that a protraction of the War is a very serious matter for every belligerent, however strong. But the Entente belligerents, though they will suffer, can bear the strain, whereas the two Central European Empires cannot. They have practically thrown away their really efficient troops. They are now calling out very young boys and old men, and, with the Russian winter to face, the consequences to them will be serious indeed. Even for their sake it would be a great advantage if the War could be rapidly brought to an end. Peace, of course, is out of the question unless we are able to dictate our own terms to the two Central European Empires. That is a foregone conclusion. But it would be better for the two Central European Empires in the long run to have to submit sooner rather than later, because every week now that the War is continued the manhood of Germany and Austria-Hungary is being exterminated. For that reason more than any other it would be desirable if Greece and Roumania were to unite with the Entente Powers to compel Bulgaria to lay down her arms, and then to push as quickly as possible upon Buda-Pesth and Vienna. The taking of Constantinople would, as a matter of course, be accomplished. But we ourselves, as we show elsewhere, have abundance of resources to effect that.

THE BALKAN OUTLOOK.

It is greatly to be feared that the Serbians are being pushed very hard, and that practically they will have to suffer as the Belgians and the Poles have suffered before sufficiently powerful Allied reinforcements are sent up to relieve them. Practically almost all Old Serbia has been occupied by the enemy, and Novi Bazar is in danger of sharing the same fate. How soon the Allied reinforcements will come up we are not told, and it would be futile to guess. It is said that the Greek Government has given all the pledges required from it respecting the treatment of British and French troops should they be compelled to fall back from Serbia into Greek territory. But we had better wait for full official information regarding such matters. Had Greece and Roumania thrown in their lot with the Allies at an earlier date they would not only have greatly served their own interests, but in all probability they would have prevented Bulgaria from joining the enemy; and, therefore, they would have secured Serbia against actual invasion. However, there is no use in bewailing either past mistakes or past misunderstandings. The real question is: How soon will the Allies be able to send sufficient reinforcements to hurl back the enemy from Serbia? It ought not to take a very long time, and yet everything seems to indicate it will not be done in a hurry. Russia, as we pointed out last week, had when hostilities broke out a total male population capable of bearing arms of very nearly 21 millions. Granting that her losses during the recent campaigns have been heavier than is generally supposed, and that even yet she has not been able to provide herself with the requisite munitions of every kind, yet it is simply incredible that she cannot afford an army sufficient to at least equal the Bulgarians. We are told that Russia herself is using every effort to supply herself fully with munitions. We hear from Japan that the Japanese have supplied Russia with immense quantities of munitions, and are promising to continue the same good offices in the future. We know that con-

siderable quantities of munitions have been furnished both by this country and by the United States. Therefore, it seems difficult to believe that Russia cannot get together 300,000 or 400,000 men to save the Serbians from the fate of the Belgians. If Russia could send 300,000 or 400,000 to increase the forces forwarded by the British Empire and by France, and if, in addition, Italy furnished a contingent, it ought to be possible not merely to bring Bulgaria to her senses, but to drive back the Germans and the Austrians, and to march rapidly, first, upon Buda-Pesth, and then upon Vienna. Germany is at the present time occupying nearly the whole of Belgium and a large portion of France. She is also in possession of Russian Poland. And now she is making an attempt to overrun and destroy Serbia. Yet Germany never has had ten millions of men under arms. She has been fighting since the beginning of August of last year; practically for almost sixteen months. She is said to have thrown away life in the most reckless manner, hurling immense masses of men against the enemy so as to force their way by sheer weight of numbers. Her losses are reputed to be enormous, both upon the Eastern front and upon the Western. And yet she is not merely retaining the ground she has taken possession of, but we are asked to believe that not merely is it impossible for the Entente Allies to beat her back, but that to send an expedition to the Balkans is to fly in the face of all good strategy, and to risk the really main points for the sake of only minor points. If Germany had control of as many capable soldiers as Russia we could understand the argument. But when Germany and Austria combined have not as many men capable of bearing arms as Russia alone, the contention seems to us not worth listening to. Unquestionably Germany had three great advantages over her adversaries. She had been preparing for generations, and she thought that she had so completely prepared that she could strike down her nearest adversaries in the course of a few weeks. Secondly, she had provided herself with an admirable system of strategic railways by means of which she was able to transfer any number of troops she thought proper from the West to the East or from the East to the West. Thirdly, by her utter disregard of all obligations of every kind—moral, religious, and legal—she got possession of large territories both in the West and in the East, and she has compelled the male populations left behind to work for her. By these means there is no doubt that she has made her own male population go much farther than it could have gone under ordinary circumstances. But allowing for everything, it is childish to say that the Entente Powers cannot with ordinary common-sense and ordinary organising power provide forces sufficient to crush both Turkey and Bulgaria, and then to smash both Austria and Germany.

"Income Tax Tables, 1915-16." Twenty-nine tables, compiled by A. G. R. Brown and T. Fraser. Price 1*s.* 6*d.* (Edinburgh: Geo. Stewart.)

ROYAL BANK OF SCOTLAND.—The annual general court of proprietors of the Royal Bank of Scotland was held on November 24, Mr. E. A. Davidson, the senior director, in the chair. The Chairman, in moving the approval of the report of the directors for the year ending October 9, 1915, drew attention to the increase of over 2 millions in the deposits on last year's figures—the amount having now reached record at upwards of 19 millions—and, whilst expressing gratification that the year's profits had also shown a highly satisfactory increase, stated that the directors regretted that the usual bonus of 1% was being withheld, owing to the necessity of providing for the depreciation which had taken place in the Bank's investments—an experience common to all banking and financial institutions in these times. A dividend was declared for the half-year at the rate of 10% per annum, subject to deduction of income tax.

Financial Notes.

WE are glad to note that while so much of the Press is writing in a spirit to discourage the public, feeling in the City is decidedly improving. City men fully recognise that Germany has failed. Her chance, since she alone was fully prepared and her adversaries were all unprepared, was in the position in which she could have struck such fatal blows against one or two of her adversaries as would have compelled those who received the blows to make peace on almost any terms. Now Germany's preparations have failed. Her immense strength did not succeed. She is on the downward grade. Her soldiery is decreasing in numbers, while her enemies are greatly increasing. Consequently, though, as Mr. Churchill said the other day, things may become worse before they are better, still Germany has failed, and the success of the Entente Allies is assured.

In the United States there is also a better feeling, and there is a much stronger desire just now than there has been hitherto to make a serious effort for obtaining a larger portion of the world's trade. We make no doubt that American efforts will be attended by a great deal of success. The United States, happily for itself, is at peace with all the world. It has had several exceedingly good seasons. It has not engaged in reckless speculation for a long time now. And, owing to the War, it has been selling to almost all the other Great Powers on an extraordinary scale. The United States, therefore, is in a position in which it ought to be able to increase its own trade materially. Especially it ought to be able to capture much of the trade carried on formerly by Germany and Austria-Hungary. When the War is over their male population will be so ruinously decreased that it will take them a long time before they are able to produce as they did formerly. On the contrary, the United States will continue growing immensely in population. After the War, no doubt, America will attract large numbers, especially of the beaten enemy. There ought to be, therefore, a material increase in the American proportion of the world's trade.

At the same time, there is no reason why this country also should not gain a very large portion of

the world's trade. We are sorry to say that neither the Government nor the commercial classes are making the effort which they ought to make, and which would better enable the country to meet the cost of the War. Nevertheless, we shall increase our trade, and when the War really ends and the efforts made by this country are properly understood, her credit will go up immensely. Moreover, she will be one of a band of Allies who will all be disposed to deal with one another as largely as possible. We are not afraid, therefore, concerning the future of our own country.

The Committee of Investigation of the hypothecary situation of the Argentine Republic has presented its report to the Ministry of Finance. It is certainly reassuring, and shows that the indebtedness of the agricultural community is by no means as great as generally was feared. The total hypothecary indebtedness of the country is stated by the Committee to amount to $2,989,349,216 m/n. The percentage of the mortgages in relation to the value of the properties comprised therein, calculated at $18,000,000,000 m/n, is about 15.55%, and of the total amount the actions before the law courts for executions or foreclosures affecting only 220 millions of the 2,800 millions of mortgages, or 7.86%, involve only 1.22% of the value of the private property.

The report goes on to state that in the amount of the mortgages in force, those held by the National Hypothecary Bank represent about $583,000,000 m/n; the mortgage companies and associations hold securities for $866,000,000 m/n; the banks of loans and discounts possess mortgage documents for $198,000,000 m/n; insurance companies hold them for $32,000,000 m/n; to societies and banks in the provinces and territories property is charged with about 20 millions; and private mortgages amount to about 1,285 millions.

It will be seen that though the amount of indebtedness is, of course, large, yet the position is one which a country so fortunately placed ought to quickly recover from if proper measures are taken. The Committee recommends that the Hypothecary Bank should be authorised to begin lending again. Whether that would or would not be a wise measure can best be judged by persons on the spot. Lending is indispensable where the borrowers are industrious, thrifty, and enterprising. But where they are the reverse, mere lending simply tends to increase the difficulties. If, therefore, a resumption of lending is authorised it ought to be hedged round with precautions.

The agreement regarding the Salvador debt which is to be submitted to a meeting of creditors on December 3 for their approval is as follows: The funding into 7% Sterling bonds of the half-year's interest on the 6% bonds, due on August 15 last, and each subsequent half-year's interest payable down to, and including, August 15, 1919. The payment by the Salvador Government of the income tax on half-yearly interest to be so funded up to, but not exceeding, 2*s.* 6*d.* in the £. And the suspension of the provision contained in the general bond for the annual cumulative amortisation fund or redemption of the 6% bonds until the funding bonds have been redeemed.

MISSOURI PACIFIC RAILWAY.

On another page we publish a further appeal by the Readjustment Managers and the Chairmen of the respective Committees of bond and stock holders for the prompt deposit of securities under the Plan of Readjustment. In our issue of July 31 we dealt fully with the plan, and we referred to the matter again last week. We would, however, counsel all those holders who have not yet participated in the scheme to deposit their securities without delay. Only by so doing can the Company's affairs be quickly rehabilitated to the advantage of all concerned.

BALTIMORE AND OHIO.
EXPANDING PROFITS.

In the current year all the factors are favourable to a very great traffic and earnings for the Baltimore and Ohio, and for a substantial improvement in the net profits of the road. In the first place, the full benefit from the higher rates conceded towards the end of 1914 only became evident in the last four months of 1914-1915, and therefore the greatest benefit from this source is derivable this year. Secondly, with the largest crops ever harvested in the west the shipments of grain traffic to the eastern ports are likely to be of unprecedented amount. Thirdly, with steel mills operating at full capacity and with record demands upon the great manufacturing industries of the country, arising from the heavy purchases of equipment and materials of all kinds, both for export and for home consumption, the heavy traffic —such as coal, coke, ores, and iron and steel manufactures, which form the bulk of the Company's business, are showing great expansion. Lastly, the property is in better condition than ever before, and the additional business now coming forward will probably be handled with great economy. With traffic increasing apace the effect of the large capital outlays of the past few years will become increasingly apparent. For the four months to October gross receipts have expanded as much as $4,056,000; expenses have increased only $862,000, and net earnings show the great expansion of $3,194,000. Moreover, practically

* Deficit.

the whole of the addition to the expenses has been in maintenance, and a greater volume of traffic has been handled at less expense than the smaller traffic of last year. The great increase of traffic and expansions in net earnings in recent months will be evident from the following statement:—

Apart from further improvement that may occur in the remaining months of the year, the net profit at present shown for 1915-1916 is $11,620,000, a sum equal to almost 8% upon the stock. In view of comparison being made in November, December and January with the very poor results of a year ago, and the strong tide of industrial activity now being experienced, these results may be substantially improved upon, and it is probable that the directors may feel warranted in restoring the dividend to a 6% basis in January next.

The Baltimore and Ohio is the most southerly of the great Eastern trunk roads, its lines extending from Philadelphia, Baltimore and Washington on the Atlantic to Chicago and St. Louis. Apart from a considerable "through" traffic the road has access to the great bituminous coalfields of West Virginia, Pennsylvania and Ohio, from whence it derives a very large coal traffic which it conveys east to tidewater, or west to the important manufacturing centres of Pittsburg, Cleveland, Cincinnati, St. Louis and Chicago. From decade to decade in the past the growth of the coal and manufacturing businesses in the districts served has been most remarkable, and the great problem which the undertaking has had to face has been to handle profitably the immense volume of traffic that accrued to it, but for which it receives an extremely low rate. Even with rates as low as they were the Baltimore and Ohio, in common with other great railroads of the United States, could have gone on earning satisfactory profits and been able to raise the capital needed to provide for future traffic requirements had not burdens been imposed upon them.

We refer more particularly to the demands of employees for higher rates of pay which the railways were practically forced to concede, and the introduction by Federal and State authorities of certain legislative enactments which compelled the companies to incur additional expenses in operating the traffic, although no benefit accrued to the lines from their adoption. In order to obtain partial compensation for the increased cost of operating, the railways, on several occasions, appealed to the Interstate Commerce Commission for permission to raise freight rates, but for a considerable period their efforts were fruitless, with the result that expenses increased much more rapidly than gross earnings, and the net return upon capital was diminished. In view of this state of affairs the majority of the companies were averse to making new capital expenditures. Normally the railways of the United States are by far the best customers of the great iron and steel and equipment companies, and when their purchases were so greatly curtailed the volume of business in the large manufacturing centres declined, and the earnings of the lines which served those districts fell off in a marked degree. Beyond this, trade generally, and especially the building trade, had received a set-back, after the great stride forward of recent years. Consequently, for the year to June 1914 the net profit of the Baltimore and Ohio was considerably below that secured in the previous year, and was equal to no more than 4.54% upon the Common stock. The dividend for that year was, however, maintained at 6%, the rate that had been forthcoming regularly since the beginning of 1906, the directors feeling justified in continuing the 6% dividend in view of the expectation that conditions would improve, especially as the railways would be called upon in 1914-1915 to move the great grain crops harvested in 1914.

It was a position such as this which confronted the Baltimore and Ohio at the outbreak of war. Coincidentally with the commencement of hostilities the Interstate Commerce Commission handed down a decision regarding freight rates which, while affording some slight compensation to the Companies for the addition to their expenses, was on the whole unsatisfactory. This factor, combined with the first effects occasioned by the War, caused the operations of the great steel and iron works to fall to a very low ebb, and by the close of the calendar year 1914 the steel industry was operating at only about one-third of its mill capacity. Further, the great wave of immigration which had been so evident in past years suddenly ceased, and the effect upon passenger traffic was considerable, the loss of revenue in the past year from this source alone in the case of the Baltimore and Ohio having been as much as $800,000. As a result of these various circumstances, and the relative poorness of the profits secured for the December half of 1914, it was decided to reduce the dividend to 5%. Even this rate was in excess of the profit earned, but the directors felt justified in making a reduction of no more than 1% in the dividend in consequence of a more favourable decision of the Interstate Commerce Commission in December last as to freight rates. Under this decision the railways, while not granted the full concessions in rates for which they had hoped, secured greater benefits than had been conceded in July 1914. On the basis of the traffic for 1914 the benefit to be derived by the Baltimore and Ohio from the higher freight rates now in force was estimated at between $2,000,000 and $2,500,000 per annum.

Roughly speaking, it may be said that the turn in the tide of gross earnings of the Company came at the end of January last, the loss of revenue for the seven months to January being practically the loss for the whole twelve months to June last amounting to $7,348,000. To offset so severe a shrinkage in gross earnings it was necessary for the officers to put forward every effort to curtail the cost of operation. This they were able to do in part by reducing maintenance outlays, but mainly by greatly reducing the

cost of conducting transportation. When Mr. Willard became president of the road, in 1910, he set himself the task of carrying out a great programme of improvements in order that the traffic might be handled more economically. This work involved the expenditure of approximately $100,000,000 of new capital. For several years prior to the appointment of Mr. Willard little progress had been made with the work of conveying the traffic more economically, but by means of the important improvements to the road and equipment and the increased skill of the officers very substantial reductions in the cost of conducting transportation were effected last year, and operating expenses were reduced as much as $10,477,000. Therefore, notwithstanding a loss of over $7,000,000 in gross receipts, the net earnings for the year showed the satisfactory increase of $3,129,000. Miscellaneous income was $891,000 lower, principally owing to the exclusion of any interest on the Company's holdings of obligations of the Cincinnati, Hamilton and Dayton Railway. After allowing for $647,000 of additional interest and other charges the net profit for the year was $1,531,000 higher at $8,426,000. This sum was equal to 5.54% on the Common stock, and after the payment of the 5% dividend there was a surplus of $829,000. In the previous year the profit equalled only 4.54%, on the stock, and after distributing a 6% dividend there was a deficit of $2,224,000. How the results for last year compared with those for former periods will be evident from the income statement herewith. From this statement it will be evident how urgent was the need for increased rates, for despite a gain of over $14,000,000 in gross earnings between 1909 and 1915 the net profit in the period fell from $11,577,000 to $8,426,000, although some $100,000,000 of additional capital had been expended, mainly with a view to lessening the cost of operating. The fact is that, through arbitrations and settlements, labour cost about $4,500,000 more in 1915 than the same services would have cost under the 1908-9 schedules, while higher taxes and full crew and other enactments raised to about $6,200,000 the burden which has had to be borne, and over which the Company has had no control.

Of the reduction of $10,477,000 in expenses, $3,434,000 was on account of maintenance of way and $1,147,000 on account of maintenance of equipment. Such a large diminution in the outlay upon the road was rendered possible by the non-recurrence of an exceptional outlay of $2,112,000 which had to be made in the previous year in consequence of damage arising from the floods in the Ohio Valley in the spring of 1913, so that the decrease in what may be termed the normal outlay upon maintenance of way amounted to $1,320,000. In the aggregate maintenance outlays last year represented 27.22% of the gross receipts against 27.69% in the previous year, after deducting the special "flood" damage repairs. Undoubtedly one of the most satisfactory features of the past year's operations was the great saving in conducting transportation. In December last the extensive improvement programme that has been carried out in the last few years was brought almost to an end by the opening of the Magnolia cut-off, believed to be one of the largest pieces of railroad work undertaken in mountainous country, and said to be the most costly per mile of road. By means of this cut-off, of about six miles in length, sharp curves and steep gradients have been eliminated, and it has become possible to increase the east-bound slow freight train load between the points served by the cut-off to 6,180 gross tons, or by as much as 36½%. Beyond permitting heavier trains to be run, the serious interference incidental to the movement of traffic when trains require assistance up the grades on a section of the road where traffic is of the greatest density has been avoided. Although the new line was opened for only six months of the last fiscal year, substantial economies in transportation costs were effected and the movement of traffic facilitated. Of course, with the handling of a greater volume of business, the benefits to be derived will become proportionately larger. For the past year the cost of conducting transportation was reduced by more than three points, from 42.49% in 1913-14 to 39.38%. How the expenses of last year compared with those for previous years will be apparent from the appended [illegible]:

Great credit is due to all engaged in the conduct of the traffic last year. By means of the stronger equipment and roadbed substantial additions to the length and weight of the freight trains were made, and for the twelve months the average freight-train load was raised by 7.3% from 617.86 tons to 662.70 tons. The improvement in the loading of the freight trains since Mr. Willard took charge of affairs has been really remarkable, for in the six years since 1909 an addition of 24% to the freight traffic (ton miles) has been accompanied by an actual decrease of over 20% in the freight-train miles run, with the result that the train load has been raised by no less than 55%. In the current year the weight of the freight trains is being still further added to, and for the whole year the officers look for an average load of fully 700 tons. The greater economy now being exercised in operating the freight traffic will be evident from the statement given below:—

Freight-Train Results, Balt. & Ohio RR. System.

The Common stock, after having touched 69 early in the year, has now recovered to a shade over par, at which the yield from the 5% dividend, allowing for exchange and accrued dividend, is about 5⅜%. If the dividend is restored to a 6% basis the yield will be 6⅜%. The return on the 4% Preferred stock, now quoted 83½, is roughly 5⅛%.

CENTRAL ARGENTINE RAILWAY.

CHANGE FOR THE BETTER.

The Central Argentine Railway Company is making rapid recovery, and last year's loss of profit is likely to be quickly regained. Since the beginning of July the traffic receipts of the line have risen by £249,400, or over 12%, which is within £26,000 of the total diminution of the past twelve months. Moreover, since the turn in the tide of traffic decreases set in in February last, rapid strides have been made, and for the 39 weeks, from February 20 to November 20, the growth in earnings amounts to no less than £567,000, or at the rate of over £14,500 per week. This means that practically the whole of the previous decline, amounting at one time last year to as much as £593,000, has now been made good, and all future gains will go to swell the relatively large earnings of the pre-war period. In part the recovery is due to the higher rates and tariffs which came into force on October 1, and in part to the large tonnage of cereals held over from the last harvest. In a cable from the General Manager, dated November 26, it was estimated that no less than 650,000 tons of cereals were then awaiting transport, and this is doubtless helping the Company at the present time. The crop outlook, moreover, is promising, although the appearance of locusts in certain districts may ultimately affect the yield of wheat and linseed. The area sown with cereals is, however, greater than last year, and recent rains are reported to have greatly benefited the growing crops. To show how well the Company has done in the past nine months, and the relatively poor traffics with which comparison has to be made until March next, we set out herewith the course of earnings monthly since July 1912:—

Course of Traffic Receipts since July 1, 1912.

° Estimated.

Both financially and economically Argentina is steadily gaining strength. The big demand for the produce of the country for the belligerent nations, and the high prices ruling, are bringing it enormous wealth, and, although general trade may not fully recover until the War is over, there is no doubt as soon as peace is restored Argentina will be in a better position than ever to enter the markets of the world to obtain all she needs to carry on the development of the country, so seriously retarded by the untoward events of the last few years. In this revival the railway companies will share, and when one reflects on the wonderful strides made by the companies in the years immediately preceding the recent setback, there must come a feeling of confidence as to the future and what may happen when normal conditions again prevail.

A restrospect of the main results of working by the Central Argentine Railway over a series of years is typical of the general position and is certainly instructive. Taking a period of nine years—*i.e.*, 1904-13—the gross earnings of the line advanced from £3,759,000 to £6,489,000, and the net earnings from £1,796,000 to £2,392,000. Thus, despite the fluctuating character of the crops from year to year, and the varying fortunes of farmers and others as a result, the advance in gross receipts was practically continuous throughout the period, and in the nine years amounted in the aggregate to no less than 72%. The growth in net earnings was not so marked owing to the rise in wages and in the price of railway material of all kinds; nevertheless, a growth of 54% in the period cannot be regarded as anything but satisfactory. The advance in profits was equally good, for, whereas in 1904 the sum available for distribution was £1,110,000, and a dividend of 6% was paid on a capital of £16,000,000 in 1913, the divisible surplus was not far short of £2,000,000, and the distribution was still 6% on a capital of £28,600,000. Last year the net profit amounted to £1,456,000, or rather more than sufficient to pay 5% on a capital of £29,000,000, so that, nothwithstanding the severe crisis through which the country has been passing, the setback in the Company's prosperity has been relatively small. The comparison of working results since 1904 is given below:—

Central Argentine Railway.

Year	Average Miles Worked	Gross Earnings	Expenses	Ratio	Net Earnings	Net Profit for Ordinary	Div.
		£	£	%	£	£	%
1914–15	3,286	5,755,000	3,363,000	58·43	2,392,000	1,456,000	5
1913–14	3,151	6,058,000	3,547,000	58·54	2,511,000	1,663,000	5
1912–13	[illegible]	6,489,000	3,719,000	[illegible]	2,770,000	1,996,000	6
1911–12	[illegible]	[illegible]	[illegible]	56·09	2,294,000	1,581,000	6
1910–11	[illegible]	[illegible]	[illegible]	55·51	2,411,000	1,664,000	6
1909–10	2,482	4,748,000	[illegible]	[illegible]	1,985,000	[illegible]	6
1908–09	2,392	4,929,000	2,884,000	58·50	2,045,000	1,354,000	6
1907–08	2,392	4,919,060	[illegible]	59·66	1,985,000	1,326,000	6
1907	[illegible]	4,604,000	2,727,000	[illegible]	1,877,000	1,189,000	6
1906 ...	2,361	4,531,000	2,553,000	56·34	1,978,000	[illegible]	6
1905 ...	2,347	3,995,000	2,060,000	51·56	1,935,060	1,249,000	6
1904 ...	2,347	3,759,000	1,963,000	52·23	1,796,000	1,110,000	6

It will be seen that last year's falling-off in gross earnings of over £300,000 was attended by a further marked saving in working expenses, and that the profit for dividend, despite increased capital charges, shows a diminution compared with the preceding year of £207,000 only. The profit available for distribution was £5,000 in excess of the sum needed to pay the 5% dividend, and after allocating £100,000 to contingencies fund to meet abnormal flood charges, the balance carried forward is only £95,000 smaller at £346,000. The income statement of the Company for the last four years is set out beneath:—

The decrease in earnings last year occurred almost entirely in passenger traffic and general merchandise, two items which are particularly sensitive to trade fluctuations, and reflect the trend towards economy which the events of the year have rendered imperative among the Argentine people. The number of passengers carried was only 20,798,000, as against 23,091,000, and the receipts therefrom declined from £1,851,000 to £1,609,000. With a return to normal times the passenger traffic should quickly recover, especially having regard to the many improvements effected in the passenger service, such as the opening of the new terminal station at Retiro and the electrification of the suburban lines now nearing completion.

The growth in the passenger traffic in recent years and the severity of the setback in 1914-15 will be appreciated by a glance at the accompanying table:—

Passenger Traffic.

Year to June 30	No. of Passengers	Passenger Receipts	Parcels, Luggage, &c.	Total Coaching Receipts
		£	£	£
1915.. ..	20,798,000	1,609,000	230,000	1,839,000
1914.. ...	23,091,000	1,851,000	254,000	2,105,000
1913... .	21,731,000	1,807,000	248,000	2,055,000
1912...	18,605,000	1,611,000	221,000	1,832,000
1911... ..	17,290,000	1,548,000	206,000	1,754,000
1910. ..	15,159,000	1,422,000	188,000	1,610,000
1909. .	13,925,000	1,259,000	158,000	1,417,000
1908	13,010,000	1,165,000	148,000	1,313,000

The crops generally were good and in great demand, with the result that wheat and maize carryings represent additional receipts of about a quarter of a million sterling, whilst the sugar harvest—which was most successful—appreciably exceeded that of the preceding year. These improvements were, however, more than offset by reductions in building materials and general merchandise, with the result that the total goods traffic was somewhat smaller, both as regards tonnage and revenue, than in the preceding year. To show the nature of the freight traffic and the relative importance of individual sources of revenue, we give the following summary:—

Freight Traffic, Central Argentine Railway.

	Quantity			Receipts		
	1914-15	1913-14	1912-13	1914-15	1913-14	1912-13

The most satisfactory feature of the year's operations was the large saving in working expenses. The decrease shown was £183,700, or 5.2%, practically the whole of which was in conducting transportation. A saving of 12.27% was effected in train mileage, mainly as a result of increased loading of the freight trains, the average gross tonnage hauled per goods-train mile being no less than 20.8% more than in the previous year. The course of working expenses over a series of years, and the lower cost of conducting transportation last year as compared with 1913-14, will be seen from the tables appended:—

Working Expenses, Central Argentine Railway.

Year to June 30	Gross Earnings	Maint. of Way	Maint. of Equipment	Cond. Transportation	Other Expenses	Total Expenses
	£	£	£	£	£	£
1915 .. .	5,755,000	525,000	502,000	1,892,000	444,000	3,363,000
1914 ..	6,058,000	491,000	521,000	2,059,000	476,000	3,547,000
1913 ..	6,489,000	617,000	624,000	2,010,000	468,000	3,719,000
1912 ..	5,224,000	382,000	468,000	1,644,000	436,000	2,930,000
1911 .	5,420,000	437,000	588,000	1,540,000	444,000	3,009,000
1910 .	4,748,000	413,000	497,000	1,429,000	393,000	2,762,000
1909 .	4,929,000	593,000	502,000	1,426,000	502,000	2,883,000
1908	4,919,000	719,000	509,000	1,331,000	354,000	2,913,000

Ratio of Expenses to Gross Earnings.

	%	%	%	%	%
1915 .. .	9·11	8·73	32·87	7·72	58·43
1914	8·11	8·60	33·98	7·85	58·54
1913	9·50	9·63	30·96	7·22	57·31
1912	7·31	8·96	31·48	8·34	56·09
1911 .. .	8·07	10·85	28·40	8·19	55·51
1910	9·35	10·48	30·10	8·28	58·19
1909	12·04	10·19	28·94	7·33	58·50
1908	14·68	10·39	27·18	7·22	59·47

It must be borne in mind that included in the above expenses is a sum of no less than £440,000 by way of contributions to the renewal funds, which is some £70,000 larger than in 1913-14, and explains the increase in maintenance of way outlays. Eliminating these special renewal contributions in both years, the decrease in working charges is as much as £254,000, and the ratio to gross receipts is only 50.79%, as compared with 52.45. The ability of the Company to effect economies is therefore great, and, inasmuch as the renewal fund account in the balance sheet now amounts to well over a million sterling, the prospect of increased charges in the current year, as a result of the rise in the price of coal, &c., can be faced with calm and equanimity. Indeed, the position of the Company may be regarded as very sound and the future most encouraging. How soon it will be in a position to again raise the dividend to 6% remains to be seen, but, seeing that the profits last year, excluding betterment outlays, were equal to 6½% on the share capital, no long time is likely to elapse, now that a turn in the tide has set in, before stockholders get back to their old position of receiving at least 6% distributions. The revenue derived from the increase in freights will, of course, be so much additional profit this year and may amount to a considerable profit.

The price of the Ordinary stock has now recovered to 84⅝xd, and on a 5% dividend basis the yield afforded is nearly £6%. The Deferred stock is quoted at 75¾xd, and in this case the yield is as much as £6⅝%. The 4½% Preference stock, with a margin of profit behind it of £1,456,000, can be bought at about 83½xd, to yield the investor £5⅜%. The Debenture issues of the Company are well-secured investments, and at current quotations they give a return of over £5%. The capital of the Company is as follows:—

	Amount.	Interest.	Price.	Yield.
	£	%		£ s. d.
4 % Debenture stock	13,436,764	4	81	5 0 11

* Price July 27, 1914. † Allowing for redemption.

RUBBER.

We notice the advance in the price of rubber this week to considerably over 3*s*. per pound is rather widely interpreted as being due to lack of transport facilities. No doubt this factor has to some extent influenced the market for "spot" rubber, but the fact that the price for delivery as far advanced as June 1916 has risen very considerably also indicates that lack of shipping facilities is not the main reason for the market activity. The spot and forward prices of the commodity at the present time, compared with a year ago, are given below:—

Prices of Plantation Rubber (Standard Crepe).

	Spot Per Lb.	Forward Delivery— Dec.	Jan. to Mar.	Jan. to June
Nov. 26, 1915 ...	**3/3**	**3/2⅛**	**3/0**	**2/11½**
Nov. 26, 1914 ...	**2/1⅛**	**2/1⅛**	**2/0¾**	**2/1**

It will be noted that the price of rubber for delivery more than six months ahead is over 3*s*. per pound.

A correspondent puts forward the suggestion that the low American exchange has something to do with the undoubtedly immense demand for rubber on behalf of America. Taking rubber at 3*s*. per pound, one ton has a value in sterling of £336. At the normal rate of exchange of $4.87 the equivalent in dollars would be $1,636, but with the exchange now at $4.70 this is reduced to $1,579, a difference in favour of the American buyer of $57, or £5 for every ton of rubber purchased on this side.

RUBBER SHARE VALUATION.

We have been asked to make clearer our remarks at pages 549 to 551 of last week on how to ascertain the real value of a rubber share as compared with the market price. The chief point to bear in mind is that the main index to the value of a rubber share is the

market capitalisation per *planted* acre, which is arrived at by multiplying the issued capital by the price of the shares and dividing by the planted acreage. As against the market capitalisation per planted acre there is a *maximum instrinsic valuation* per planted acre for all rubber estates, on the assumption of a given full maturity yield per planted acre, a given profit per pound, and presuming the investor requires a yield of, say, 10%, on his money.

To give an example we will take a well-known rubber company which has an issued capital of £159,762, in 2*s.* shares at present quoted at 7*s.* 3*d.*, which means that the actual market capitalisation is, say, £578,100. As the planted area is 4,156 acres, the market capitalisation per planted acre is £139. Presuming the investor will require a 10% yield on his money when full maturity is reached, and that *then* the yield per planted acre will be 350 lb., with rubber 2*s.* per pound and "all-in costs" at 1*s.* per pound—*i.e.* profit 1*s.* per pound—what will be the maximum intrinsic valuation per planted acre? The sum is as follows:—

$$\text{Planted Area} \times \text{Yield} \times \text{Profit per lb.} \times 10 \div \text{Planted Area}$$

$$\text{i.e.}\quad \frac{4{,}156}{1} \times \frac{350}{1} \times \pounds\frac{1}{20} \times \frac{10}{1} \times \frac{1}{4{,}156} = £175.$$

The figures cancel one another until $\frac{350}{2}$ remains.

The multiplication by 10 capitalises the profit on a 10% basis, and as it is assumed that the whole of the profit is distributed as dividend, the figure of £175 is the *maximum* intrinsic valuation per planted acre on the basis of 350 lb. full maturity yield and 1*s.* per pound profit. As will be seen from the cross-page analysis herewith, the well-known rubber company in question has a present market capitalisation of £139. Its planted area has practically all reached the tapping stage, but is not yet in full bearing. For this year the yield per planted acre will be about 300 lb. Consequently, the investor in the shares at the present market capitalisation of about £140 per planted acre must look upon his purchase as fairly fully valued, unless he anticipates one or more of the following three possibilities:—

(1) A perpetually higher price than 2*s.* per pound for rubber.

(2) Lower "all-in" costs than 1*s.* per pound.

(3) Higher full maturity yield than 350 lb. per planted acre.

It is an easy matter to alter the maximum intrinsic value calculation according to the variations of these three factors.

In the following table we show what the maximum market capitalisation per planted acre must be with a varying price for rubber:—

Assuming Investor requires 10% *yield.*

Price of Rubber Per Lb.	Assumed "All In" Cost Per Lb	Full Maturity Yield 400 Lb. per Acre Maximum Intrinsic Valuation per Planted Acre	Full Maturity Yield 350 Lb. per Acre Maximum Intrinsic Valuation per Planted Acre
s. d.	*s. d.*	£	£
1 6	1 0	100	87½
2 0	1 0	200	175
2 6	1 0	300	262½
3 0	1 0	400	350
3 6	1 0	500	437½
4 0	1 0	600	525

PRESENT PRICE OF RUBBER, 3*s.* 0½*d.* per lb.

NOTE.—The above table shows the maximum market capitalisations per planted acre because it is assumed that the whole of the profit represented by the difference between cost and price of rubber is distributed in dividends, and affords the investor a 10% yield on his capital.

The cross-page tabular analysis we gave last week, showing the positions and valuations of about 80 different rubber companies, has been much appreciated. Next week we hope to deal in a similar manner with a further large number of concerns not included in last week's list.

TEBRAU RUBBER.

THE report of this Company for the year to June 30, 1915, confirms the profit forecast made in our issue of November 6. Of the planted area of 3,917 acres, 2,176 acres were in bearing at June 30, 1915, some 714 acres having been brought in during the twelve months. The average number of acres tapped for the year, however, was only 1,940 acres, or less than half the planted area. The output, which was nearly double that obtained for the previous twelve months, amounted to 646,082 lb., giving a yield per acre tapped of 333 lb., and per total planted acre of 165 lb. A slightly higher price was realised for the product. The cost of production was reduced to 1*s.* 2*d.* per pound, including every known revenue charge—a decline compared with 1914 of about 22%—and the net profit for the year rose to £32,798, or 1*s.* 0.12*d.* per pound, in comparison with £10,671, or 7.67*d.* per pound, in the year ended June 30, 1914. The following table gives a good idea of the progress of the Company:—

	Year to June 30— 1915	1914
	Acres	Acres
Planted area	3,917	3,917
Average acreage tapped	1,940	1,242
	Lb.	Lb.
Rubber output	646,082	334,440
Yield per acre tapped	333	245
Yield per acre planted	165	85
Gross price realised per lb.	2/2·17	2/1·87
"All in" cost per lb.	1/1·95	1/6
Profit per lb.	1/0·12	0/7·67
	£	£
Value of rubber	70,440	35,770
Total revenue (per statement)	37,578	25,098
Net profit	32,798	10,671
Sundry receipts	274	424
Brought forward	11,261	166
Total available	44,333	11,261
Appropriated:		
Capital expenditure written off..	10,661	
Transferred to reserve	16,000	
Dividend paid	12,500 (10%)	
Carry-forward	5,272	11,261
	44,333	11,261
Issued capital	125,000	
Surplus liquid assets	30,745	15,098

Present price of shares, 2½. Market capitalisation per planted acre, £72.

When one comes to consider the allocation of the past year's profit, one is almost startled by the extreme cautiousness of the policy adopted by the directors. Out of the year's net profit of £32,798 a dividend of 10%, absorbing only £12,500, is declared: £16,000, equal to another 12½% on the capital, is transferred to reserve, £10,661 is written off capital expenditure, in addition to £5,407 charged to depreciation in the "all-in" cost, and the carry-forward is superficially reduced to £5,272. We say superficially reduced for the reason that the balance sheet shows that, after allowing for the payment of the 10% dividend, the liquid assets exceeded the current liabilities at June 30, 1915, by no less than £30,745, against £15,098 twelve months previously. It seems an ultra-cautious policy to keep in hand a sum representing 24% on the issued capital of £125,000, especially in view of the bright prospects in regard to further large increase of production in the current financial year. True it has been decided to erect a new factory, to be ready for occupation at the end of June next, but the report expressly states that it is proposed to spread the entire cost of the new installation over the next three years' revenue.

	Par of Shares	Year Ends	Issued Capital £	Market Price of Shares, Nov. 17	Planted Acreage— 5 Yrs. and Over	Under 5 Yrs.	Total	Market Capitalisation per Planted Acre £	Past Year's Results— Rubber Output Past Year Lb.	Current Year Lb.	Output per Planted Acre Lb.	Profit £	Costs "All in" s. d.	Dividends Paid Amount £	%
"A" Company	2 -	Dec. 31	159,762	7/3	4,073	78	4,156	139	1,131,420	1,014,957(710)	272	51,466	1 3	39,940	25

However, while shareholders may feel they are being kept from receiving the much larger immediate dividend that is warranted, it will be apparent to all that the extremely cautious policy now adopted will be of benefit in the future. Moreover, the progress of output in the next few years will be rapid. The output for the current financial year is conservatively estimated at 900,000 lb., of which 285,949 lb. have been obtained in the first four months to November 30. Of the 3,917 planted acres, only an average of 1,940 acres, or less than half the planted acreage, were tapped in the past year. Of the balance of 1,977 acres, a portion has now come into bearing, and the whole of the remainder should have reached the tapping stage by the end of next year. Consequently, very heavy annual increases of output may be expected during the next two years. The current year's estimated output of 900,000 lb. should yield a profit of at least 1*s.* per lb., equal to £45,000. A 20% dividend on the capital would absorb only £25,000.

At the present market price of £2¼ *cum* dividend, representing a market capitalisation of £72 per planted acre, the £1 shares of the Company are distinctly cheap, having regard to the outlook for production and the financial position. When in full bearing the intrinsic valuation per planted acre on the basis of rubber at 2*s.* and "all-in" costs at 1*s.* per pound, should be at least £150, equal to, say, £4½ for the £1 shares, in comparison with the present quotation of 2¼. The insufficient factory accommodation, which is being smartly remedied, is not a vital factor, and the [illegible] guarded by the large reserve fund.

FRASER AND CHALMERS, LIMITED.

Fairly considerable progress has been made by this well-known engineering Company during the twelve months to June 30, 1915, the balance of net profits after providing for depreciation showing an increase of nearly 50% over those for the previous year. It is certainly satisfactory to find that progress has been made during a particularly difficult time. Naturally, trading during the period has been affected by the War, while difficulties have been experienced in obtaining supplies of raw materials and in maintaining a sufficient labour force. As the Chairman points out, these are difficulties which apply practically to all engineering concerns in this country at the present time, but they have been somewhat accentuated in the case of Fraser and Chalmers, Limited. Owing to the close proximity to other works and the Arsenal at Woolwich, there is at present an unprecedented demand for skilled and unskilled labour, and the housing problem in that district adds to the difficulties of the situation. Twelve months ago the Chairman told the shareholders that there was a falling-off in the number of orders and inquiries for Erith manufactures immediately after the outbreak of war, but after some time had elapsed a better tone had been observed, though it was hardly to be expected that the normal volume of business would be secured during the year. This anticipation proved to be largely correct, because, "although the turnover in value was approximately the same as the previous year, in tonnage it was considerably less, the levelling-up in money value being largely the necessary result of increased cost of manufacture in these times." Nevertheless, the Chairman was able to report progress. The advance recorded last year in the manufacture and sale of steam turbines and turbo-blowers has been fully maintained during the year under review, the results from this department showing an improvement; and, equally satisfactory, there is every promise that it will continue to grow in importance. The Company has now an established name in this class of manufacture, as is evidenced by the increasing number of inquiries and orders which are received. The orders taken in the coal-carrying and coal handling department have also been very satisfactory, and at the present moment the Company is in the process of carrying out some substantial orders for the French Government, and also in South Africa and China. The directors anticipate that in the near future this should be one of the principal departments of the Company. Some business has been secured also in Bettington boilers, and further inquiries are at present under consideration, though they may have to be deferred owing to the present regulations which exist for controlled establishments. The works of the Company were declared a controlled establishment under the Munitions of War Act on August 2 last. There are certain disadvantages which partially offset the advantages in dealing with the question of labour. Owing to the requirements of the Government, all orders and instructions from them must receive precedence over any other work, and, consequently, there is found considerable difficulty in maintaining certain branches of the business. Considerable progress is reported in regard to the manufacture of dredges, and much encouragement has been received in the experience of the construction of the last three dredges built. In the early part of this year the Company was offered further orders, but owing to the necessity of providing for Government and other war work these had to be refused. During the year under review the business in South Africa has shown some improvement, accounted for by the increase in the demands which sprung up shortly after the outbreak of war for many stamp mill and other supplies, in view of the danger of a shortage and the cutting-off of supplies from Germany. During the pressure of the demand the Company had to place some of its orders in the United States, but it is hoped that in time this position will adjust itself. The trading in Australia, and also in Canada, shows a falling-off as compared with the previous year. Certain new business has been secured in Australia, and the satisfactory crops in Canada are expected to improve conditions there in the near future.

Originally the business of the Company was confined practically entirely to the manufacture of mining machinery, more especially for export to South Africa. With a comparative stationariness of [illegible] conditions of the South African mining system, and with the mining companies' wants largely satisfied, together with an increase in competition, it is not surprising that the directors of Fraser and Chalmers, Limited, should find that their business was inclined to show a downward tendency. With no great probability of improvement in the future, the board decided on the wise policy of enlarging the basis of the business, and, consequently, at the present time, instead of being engaged purely in the manufacture of mining machinery, additional branches of business have been opened. The Company has specialised in the manufacture of turbines and turbo-blowers. It has also taken up the manufacture of large gas-engines, while other manufactures undertaken are those of oil-engines, coal-handling machinery, and boilers, so that whereas formerly the profits depended on one class of manufactures, a change has occurred, and in the future the broader basis should have an important bearing on the results. As at the present time the Company is naturally passing through a transitional stage, it cannot possibly be expected that the undertaking of establishing practically new businesses could be carried into effect in a successful manner all at once. There has been, for example, the necessity of finding new markets—a very costly proceeding, for, of course, special inducements in the way of low prices have had to be offered in order to obtain a start. During the first few years, therefore, it means a period of going slowly, of meeting exceptional costs, and, consequently, of being content with a comparatively small margin of profit.

For the past twelve months the net trading profits, after deduction of management expenses, have

amounted to £24,640, as compared with £20,711 for the previous year. After allowing for depreciation there is a net balance of £12,059, as compared with £8,377—an increase of nearly 50%. This improvement, however, is not sufficient to permit of a resumption of dividends on the Ordinary shares, the last distribution being in 1912, when 3% was paid. The Preference dividend has, however, been duly paid, and the balance, plus the amount brought forward, less a transfer of £17,904 to reserve "in order to compensate for the amount expended during the year in fixed plant and machinery at the works," is carried forward to the current year.

In the following table we set out the manner of distributing the profits for the past six years:—

Year ended June 30—	1915	1914	[illegible]	1912	1911	1910
	£	£	£	£	£	£

* After [illegible]

The issued share capital amounts to £441,000. A total of £70,000 Debentures have been issued and lodged as security for future loans and personal guarantees. With the most recent transfer from profits the reserve fund is brought up to £80,000. The works stand in the books at £204,967. Patterns and drawings stand at the nominal sum of £1, as do the patents. The total assets are valued at £714,491, as may be seen from the following summary of the liabilities and assets at June 30 last:—

LIABILITIES	£	ASSETS	£
Issued capital	[illegible]	[illegible]	[illegible]

	714,491		714,491

As regards the future, it may be pointed out that during the past year the Company has appointed a representative to look after its interests in Russia. Although there is not much prospect of immediate business the ground is being prepared for future work. The Company has entered into a contract with Vickers, Limited, for the supply of electric power to the Vickers works at Erith. Should this not be continued after the expiration of the contract the power station will supply all the needs of Fraser and Chalmers' own works at a considerably lower cost for power than in the past. The Company is carrying out a large amount of work for the Government or its contractors and for the supply of power units, which is classed as war work; but, naturally, other orders and inquiries for the Company's ordinary manufactures have had to be turned down. The works are fully occupied at the present time, and "there is reason to hope that the results for the current year should be as favourable as, if not more so than," those of the year just ended. Hence at present prices both classes of shares appear worth the attention of investors who desire what must be partially regarded as a lock-up investment.

GENERAL LIFE ASSURANCE COMPANY.

NOTWITHSTANDING the disturbing factor of the War this Company is able to point to some satisfactory features in its annual report for 1914. The new business amounted to £534,395 in sums assured, £28,640 thereof being reassured, the net retention thus being £505,755, which is [illegible] £146,502 [illegible] corresponding [illegible] 1913. It would be wrong, however, to infer that the Company's new business [illegible] by the War. The greater part of the new business in 1913 was effected in the United Kingdom, but the home new business in 1914 was less than a fourth of the total amount reported in that year.

The following comparison of the Company's home and overseas new business in these years is interesting:—

			Annual Value of New Sums Assured.	
			Written in the United Kingdom.	Out of the United Kingdom.
			£	£
1913	..	...	221,883	137,370
1914	..	...	122,420	383,335

Thus in 1914 the new business within the United Kingdom showed a decrease of £99,463, while on the other hand the new business out of the United Kingdom showed an increase of £245,965.

Of the new business out of the United Kingdom effected in 1914, £349,475 related to British colonies and £33,860 to foreign countries. The Company is strongly represented in South Africa.

The total net premium income amounted in 1914 to £1,[illegible] [illegible] decrease of £4,844. The

premiums on business within the United Kingdom, £130,157, are decreased by £6,933; those on business out of the United Kingdom, £46,774, are increased by £2,089. The expense ratio, comparing expenses of all kinds with premium income, was 20.3% in 1914, as compared with 19.7% in 1913. Looking to the amount and geographical distribution of the new business, an increase in the expense ratio was to be looked for, but the expense ratio as it now stands is about 50% above the average shown by British life offices, and a reduction in this respect seems desirable in future.

The mortality experience seems to have been favourable. The death claims amounted to £139,134, of which £18,019 was reassured, and it is reported that £32,646 less was paid out in this way than had been provided for. The number of deaths anticipated by the mortality tables was 527, and the actual number was 431. At the date of the annual meeting it was reported by the Chairman that only two death claims, both being for small sums under old policies, had fallen on the Company owing to war casualties, although such comparative immunity is not again to be expected. The directors are, however, limiting their risks in this direction, as they are not taking any new policies subject to war hazards.

Endowment assurances for £46,163 matured by survivance during 1914. Through the year's operations the life assurance fund was increased by £22,521 to £2,043,319, the investment reserve fund being maintained at £133,531. The interest yield on the life fund seems to have been about £3 15*s*. 9*d*. per cent., after deduction of tax, as compared with the rate of 3% actuarially assumed for valuation purposes. The total assets on December 31, 1914, amounted to £2,281,460, as appearing in the balance sheet, the values of the Stock Exchange securities being taken at or under cost price.

Policyholders have the protection of a subscribed capital amounting to £1,000,000, of which, however, only £50,000 is paid up, in shares of £100 with £5 paid. The proprietors' fund (inclusive of paid-up capital) appears in the balance sheet on December 31, 1914, as £66,156. The dividends to shareholders during the current quinquennium are at the rate of 10% per annum. The next quinquennial valuation falls to be made on December 31, 1917. The reversionary bonuses declared on the last quinquennial occasion on the current series of policies (those effected subsequently to 1897) were at the rate of 20*s*. per cent. per annum, in compound form.

SCOTTISH EQUITABLE ASSURANCE SOCIETY.

The accounts of this mutual life office are made up to March 1 in each year. The last quinquennial valuation, made as at March 1, 1913, led to improved bonus results, although out of the normal profits it was found advisable to apply £85,567 as provision for depreciation in the market value of negotiable securities. The bonuses in reversionary form declared in respect of the quinquennium then ended were at the standard of 30*s*. per cent. per annum, in compound form, as compared with 26*s*. per cent. per annum five years previously. This excellent declaration was no doubt helpful to the Society's agents, and an increased new business was reported for the first year, ending March 1, 1914, of the current quinquennium.

That the new business for the year ending March 1, 1915, showed a reduction is not surprising; indeed, this was a general characteristic during 1914 in the experience of all life offices whose new business is obtained in the United Kingdom, and the accounts of companies made up to December 31 related to five months of war, whereas in the case of the Scottish Equitable seven months of war were included. Nevertheless, the diminution in the Society's new business is only about 15%. The new assurances effected in the year to March 1, 1915, amounted to £697,123, of which £62,194 was reassured, the net retention thus being £634,929, as compared with £751,453 in the previous year.

The Society's total premium income, amounting in the year ended March 1, 1915, to £426,856, shows an increase of £3,026. Thus the new business appears to have been more than sufficient to replace wastage through deaths, survivance, surrenders and other causes. Indeed, this fact is more strikingly brought out if single payments of premium are excluded from the last two years' accounts. Apart from these payments, the premiums in the year ended March 1, 1915, amounted to £415,204, as compared with £406,490 in the previous year, the renewable premium income thus showing an increase of £8,714.

The expense ratio in proportion to the total net premium income shows a diminution of 5*s*. 1*d*. per cent., being £13 4*s*. 9*d*. in 1914-15, as compared with £13 9*s*. 10*d*. per cent. in 1913-14.

The sum of £9,291 was received during the last financial year as consideration for annuities granted, as compared with £12,897 in the preceding year. The Society does not appear much inclined to push this class of business, although the attractions of annuity contracts for life offices are increased by the higher rate of interest which can at present be secured on new investments in good classes of security.

As regards claims, the Society's experience seems to have continued to be favourable. The amount of the death claims in the last financial year, inclusive of bonuses, but deducting reassurances, was £338,045. This is higher by £33,043 than was reported for the previous year, but is stated to have been well within the expectation. Bonus additions to ordinary participating policies which became claims represented 42.7% of the total sums assured, which testifies to the past productiveness of the Society's bonus system. Endowment assurances for £134,330 matured by survivance.

Through the year's operations the Society's funds were increased by £58,110 to £6,285,115. The nominal increase was £102,362, but it is explained that, in view of the prevailing depreciation of securities, the directors thought it advisable to carry £44,252 to the investments suspense account.

The average net rate of interest for the year, after deduction of income tax, is reported as £3 19*s*. per cent., as compared with £4 0*s*. 3*d*. per cent. in the previous year. The diminution in the net yield is more than accounted for by the increase in income tax. Although income tax for the now current financial year will be still higher, the Society will benefit by the relief given in respect of purely life offices, according to the methods of assessment indicated by the late Chancellor of the Exchequer in his last financial statement. In any case the net interest yield reported by this Society from its last financial year shows that a considerable profit must have accrued to members from the investment of the funds, as the rate of interest actuarially assumed for the accumulation is 3%.

CASTNER-KELLNER ALKALI.

The twelve months to September 30, 1915, have proved exceptionally prosperous for this well-known Chemical Company, and the profits made are far and away the highest recorded. Of late years the Company has enjoyed a time of considerable prosperity and dividends have been on a substantial scale. Up to 1907 the profits were fairly substantial, but the dividends, though never falling below 4%, were on a much smaller scale than have prevailed since then. The formation of the Company dates back to 1895, when it was brought out to work the Castner-Kellner patents in the British Empire, except Canada, for the manufacture of caustic alkali and bleaching-powder by means of electrolytic decomposition of salt. In 1900 another business was taken over, the basis being thereby broadened by the addition of other chemical manufactures, the chief portion of the acquired busi-

ness being the manufacture of sodium. The Company ranks among these industrial concerns in this country which are well and scientifically managed and administered, and the board has set itself resolutely to maintain the works in a thoroughly efficient and up-to-date condition. Steps have been taken to bring down the cost of production to the lowest possible figure, and by reason of the foresight and energy consistently forthcoming the dividend since 1907 has never been lower than 12½%, while it has been as high as 22½%. For the past twelve months the rate is at 20%, but in comparing the rate of distribution it should not be forgotten that in 1913 it was decided to capitalise a portion of the reserve fund, and distribute it as a special bonus to the shareholders, and the result of this increase in capital was that the 15% dividend paid for the twelve months to September 1914 was equivalent to the 22½% for the previous year, and it may also be added that the 20% that is paid for the twelve months to September 30, 1915, has called for nearly £45,000 more than the 22½% that was paid in 1913. The profits for the past twelve months have amounted to £267,203, as compared with £179,730 for the previous year. The reason for the substantial increase is to be found in a capital expenditure of £215,000 which was made between 1913 and 1915 on land, buildings, plant, machinery, &c., the new plant only beginning to make itself felt in the early part of the financial year under review, and, as the Chairman pointed out at the meeting this week, the extra profits are due not to increased prices or to any extra profits made out of Government contracts, but to the foresight of the directors, plus a certain amount of good fortune, in very largely increasing the plant at the right time, enabling them to carry out all contracts without inconveniencing any customers. The Chairman also emphasised the fact that such of the products as had been required by the Government had been supplied at prices which left the Company no more, if as much, profit than it would have derived from their sale in the ordinary way of business.

The following affords a bird's-eye view of the profits secured from 1901:—

		Gross Profits	Net Profits	To Reserves	Dividend
		£	£	£	%
Year to Sept. 30,	1915 ...	267,203	252,750	60,000	20
,, ,,	1914 ...	179,730	165,875	52,500	15
,, ,,	1913 ...	177,189	163,977	55,000	22½
,, ,,	1912 ...	181,819	168,380	80,000	20
,, ,,	1911 ...	183,399	170,063	80,000	20

After providing for Debenture interest there is a balance of £252,750. The 20% dividend has absorbed £150,000 of this, leaving a balance of £102,750. Of this, £50,000 is carried to the depreciation reserve, and £10,000 to the general reserve, the surplus of £42,750 being added to the carry-forward, bringing it up to £61,152.

In the following statement we show the manner of distributing the profits for the past six years:—

12 Months to Sept. 30—	1915	1914	1913	1912	1911	1910
	£	£	£	£	£	£

* Less sum voted to directors.

The issued share capital now amounts to £750,000, and there is in addition a Debenture issue now totalling £177,253. This Debenture debt was originally £250,000, but a sum of £5,000 is set aside each year for the purpose of redeeming the issue. With the allocations from the profits of the past twelve months the depreciation reserve is brought up from £387,500 to £437,500, and the general reserve from £69,364 to £79,364. The general reserve is invested entirely outside the business, and in addition to these investments there are others valued at cost at £236,578. Some of these are trade investments upon which no exact value can be placed, but the greater portion consists of thoroughly sound marketable securities quoted on the Stock Exchange. The total assets are valued at £1,725,727, of which land, buildings, plant, machinery, patents, and other assets are valued at £1,186,788. If the depreciation reserve be deducted it will thus be seen that this item is reduced to under £750,000. The cash in hand at September 30 last amounted to £77,917. Herewith we give a summary of the liabilities and assets as shown in the last balance sheet:—

LIABILITIES.	£	ASSETS.	£
Issued share capital ...	750,000	Property, &c. ...	1,187,168
4½% 1st Mort. Deb. stock	177,253	Sundry debtors ...	88,528
Sundry creditors, &c. ...	153,458	Stocks	64,372
Depreciation reserve ...	437,500	Investments ...	305,941
General reserve	69,364	Bills receivable ...	1,201
Profit and loss	211,152	Cash	77,917
	1,725,727		1,725,727

Naturally the large increase in the carry-forward, bringing it up to £61,152, as compared with £18,402, is due to the necessity of providing for the payment of whatever sum that may become due from the Company in respect of the excess profits taxes. The directors are not able to say at present with anything like complete precision what the amount will be, "but whatever it might turn out to be the directors felt certain that the carry-forward will not only cover it but leave a large margin to spare." Altogether it will be seen that the Company occupies a strong position. It has built up a very substantial business, and, as already indicated, by adopting a policy of maintaining the plant in a thoroughly efficient condition, by introducing the most modern methods of manufacture, and by following out a conservative policy thereby giving command of some additional working capital, it is well placed not only to meet competition, but also able to take advantage of any trade expansion. Doubtless Government demands will continue to keep the Company very busy during the current year, and there is, therefore, every reason to assume that the profits will continue on a very substantial scale. The £1 Ordinary share has risen from 2½ to 3 throughout the past twelve months On the basis of the 20% distributed last year the yield afforded is very nearly 7%. The Debenture stock is quoted at 95, thereby giving a yield of 4¾%. This stock is well covered from both capital and interest point of view, and the yield is certainly a good one.

We recapitulate the capital, prices, and yields afforded herewith:—

Amount	Description	Par	Price	Div.	Yield
£		£	£	%	£ s. d
177,235	4½% 1st Mort. Deb. stk....	100	95	4¾	4 15 9
700,000	Ordinary Shares ...	1	3	20	6 18 10

DENNIS BROTHERS (1913), LIMITED.

Last year we drew the attention of investors to the possibilities of the shares of this motor-car manufacturing concern. The report for the year to September 30, 1915, shows that the profits have risen from £68,169 to £122,066. This increase has been secured in spite of serious difficulties. The supply of labour and material has caused considerable anxiety, and the Company has had to cancel most of the orders announced as being in hand in December last owing to the fact that, with the exception of fire-engines for municipal authorities, the War Office has demanded the whole of the Company's output.

The Company is a young one, being brought out in March 1913, when it was formed for the purpose of acquiring and developing the business of Dennis Bros., Limited, of Guildford, manufacturers of motor vans, motor lorries, motor fire-engines, motor-cars, &c. A three-yearly profit period was shown in the prospectus. For the twelve months to September 30, 1910, the profit was £19,378, for the following year it rose to £30,914, and for the year to September 30, 1912, it reached a total of £41,085. The prospectus anticipated a dividend of 10 per cent. per annum on the Ordinary shares, on the capital of £300,000 with which the Company was formed. The first report covered the period to September 30, 1913, and this showed that the prospectus' anticipations of higher profits had been realised, the trading profit amounting to £55,441. After providing for depreciation and payment to the vendors of the profits from September 30, 1912, to March 31, 1913, the balance was sufficient to provide for the 10 per cent. dividend forecasted.

For the twelve months to September 1914 the trading profit rose to £68,169, and the net profit was £61,485, which was more than sufficient to provide for a 20% dividend. The distribution, however, was maintained at 10%, and £10,000 was carried to general reserve, while the whole of the preliminary expenses, amounting to £19,851, were wiped out. As already stated, for the past twelve months the trading profit has amounted to £122,066, and the sum available for distribution has risen to £117,920, this being nearly sufficient to provide for a distribution of 40%. The actual dividend is 15%, and from the balance of £72,920 a sum of £40,000 is carried to general reserve, and £25,000 to a reserve for fluctuations in stock values, the exceptionally large allocations being due to the necessity of providing for excess profits duty and other contingencies. The carry-forward is £11,349, as compared with £4,129 brought in.

We set out herewith the manner of distributing the profits:—

Year ended Sept. 30	1915	1914	1913
	£	£	£
Trading profit	122,066	68,169	55,441
Interest and transfer fees	2,800	675	320
	124,866	68,844	55,761

Carried forward	11,349	4,129	2,495

* Including preliminary expenses written off.
† Six months.

The issued capital is £300,000, and the reserves have been brought up to £75,000, while there is also £11,349 carried forward. The total assets are valued at £476,153, of which cash forms the exceptionally large total of £118,109, this being the largest individual item of the assets. Herewith we summarise the liabilities and assets as at September 30 last:—

LIABILITIES.	£	ASSETS.	£
Issued capital	300,000	Buildings and goodwill	102,597
Sundry creditors	76,804	Land, buildings, &c.	82,641
Reserves	75,000	Stock on hand and work in progress	168,789
Profit and loss	11,349	Debtors	11,017
		Investments	3,000
		Cash	118,109
	476,153		476,153

During the past year the Company's operations have been confined to the manufacture of two types of vehicles only, one being the military type of wagon and the other the Dennis turbine fire-engine. On August 4, 1914, the military authorities commandeered all the vehicles which were made and those nearing completion in the factory, and payment was made as if they had been delivered to the customers for whom they were originally intended, and, as already stated, with the exception of the fire-engines for municipal authorities, the whole of the output has been taken by the War Office. This naturally has necessitated a loss of connection with private clients, and has depreciated the goodwill. Doubtless on the termination of war competition among commercial-vehicle manufacturers will be very acute, but there is no doubt that a considerable wastage will have to be made good, and mechanical traction will undoubtedly be called upon to make up for the enormous losses of horses due to the War. Nevertheless, it is certainly desirable in view of possible competition that the financial position of the Company should be strengthened as far as possible, and hence the decision of the directors to set aside sufficient profits not only to meet the excess profits duty, but also to write down the goodwill, will have a beneficial effect on future results, for it goes without saying, of course, that the stronger the Company's financial position the better it will be placed to meet whatever competition is manifested. The £1 share now stands at 29*s.* 6*d.*, and on the basis of the 15% paid for last year, the yield afforded is over 11%. There should be little or no difficulty in maintaining profits at a sufficiently large figure to provide for a continuance of the 15% distribution, and the large yield afforded is undoubtedly attractive.

DICK, KERR AND COMPANY.

A SLIGHT improvement has been shown for the twelve months to June 30, 1915, as compared with the previous year, the profits increasing £2,200. After providing for Debenture interest and Preference dividend the balance is sufficient to provide for a 6% dividend, but in view of the abnormal conditions prevailing it was considered advisable to pass the dividend again and place £25,000 as a reserve against contingencies.

The manner of the distribution of the profits may be seen from the following statement for the past six years:—

Twelve months ended June 30	1915	1914	1913	1912	1911	1910
	£	£	£	£	£	£
Net trading profits	41,539	41,762	30,092	3,275	37,994	22,821
Debenture interest, &c.	10,539	10,961	11,183	11,551	11,760	12,105
Debenture stock redemption	—	—	500	500	500	500
	31,000	30,801	18,409	—8,776	25,734	10,216
Preference dividend (6%)	18,300	18,300	18,300	18,300	18,300	18,300
	12,700	12,501	109	—27,076	7,434	—8,084
Ordinary dividend	—	—	—	—	13,000	13,000
					(5%)	(5%)
	12,700	12,501	109	—27,076	—5,566	—21,084
Special reserve ...	25,000	—	—	—	—	—
	—12,300	12,501	109	—27,076	—5,566	—21,084
Brought forward	5,121	2,625	2,516	29,592	35,158	56,242
Carried forward	—7,179	15,126	2,625	2,516	29,592	35,158

The normal development of the business is, of course, stopped, and the Company is now busy on abnormal work. The profit on last year's trading was principally derived from orders and contracts taken before the War, and these are gradually falling in. The decision of the board to set aside £25,000 to a special reserve is to provide for the transition period following on the end of the War, which will be occupied in re-establishing normal conditions. The directors are hopeful, however, that as a result of the work now being undertaken for the Government "some reasonable profit proportionate to the efforts that have been made will be permitted—sufficient, at all events, to make it unnecessary next year to put aside a large percentage of profit to reserve for contingencies." As the Company is engaged practically entirely on War work, naturally it will be affected by the excess profits duty. The £1 Ordinary share may be obtained at about 8*s.* 9*d.*, and the £1 Preference share at 13*s.* The latter gives a yield of 9%, and as there should be no difficulty in maintaining the Preference dividend the shares have decided speculative attractions.

SAMUEL ALLSOPP AND SONS.

A MEETING of the holders of the 4½% Debenture stock of Samuel Allsopp and Sons, Limited, was held on November 23 for the purpose of considering a scheme of arrangement. The scheme is founded on the fact that on December 31 next the moratorium in respect of interest upon the Debenture stock comes to an end, and unless steps had been taken the Debenture stockholders could then take action to wind up the Company. The scheme extends the period in which the Debenture stockholders can take action, providing that in respect of arrears of interest the Company shall issue certificates of rights, the certificates to be issued in respect of that portion of the interest which the Company may from time to time be unable to pay in cash. On account of the current year it is proposed to pay 2½%, so that the certificates will only be issued for 2%. The scheme was passed by a very large majority. At the meeting Sir William B. Peat afforded some information as to the Company's present position. The directors now responsible for the management of the Company presented their first accounts for the year up to September 1914, showing a surplus profit of £13,048. For the twelve months to September 30 last it is expected the profit will be at least £30,000, and this during a period seriously affected by the War. Increased taxation has tended to reduce the consumption of the Company's output, but a set-off has been secured against that, inasmuch as Allsopps has acquired an interest in Showells Brewery. For the current year, with the further serious restrictions which are in force applicable to other licensed property, and particularly to licensed properties in areas where munitions are being manufactured, the Company's barrelage shows a serious redution as compared with the barrelage of the immediately preceding year. On the other hand, however, in so far as all brewing materials are concerned, the Company is well-bought for the current year's requirements at comparatively cheap prices. On the whole, however, it would appear that the outlook is not particularly brilliant, and it was, therefore, distinctly desirable that some arrangement should be made with the 4½% Debenture stockholders to enable the Company to tide over what may prove to be a difficult period. With the scheme of arrangement carried it seems possible that, given good management, the Company may eventually fairly turn the corner.

HOPE BROTHERS, LIMITED.

TWELVE months ago the Chairman of Hope Brothers, Limited, warned the shareholders that the business must undoubtedly be affected by the withdrawal of thousands of customers from their ordinary occupations, and, he added, "not only may our sales be reduced from this cause, but we must suffer from rising markets and almost certainly from the difficulty of obtaining certain classes of goods." The warning was a timely one; and probably no retail businesses have felt more acutely the effects of the War than those dealing in men's wear, and, as anticipated, the Company has had to contend with the rise in prices of raw materials and the difficulty of obtaining certain classes of goods, while the question of transport has proved a very pressing one. Some slight compensation for the falling off in the regular trade has occurred by contracts which the directors were able to obtain for the supply of clothing to the troops. Altogether it is not surprising that the trading profit for the twelve months to August 31, 1915, is only £43,845, as compared with £53,733 for the previous year. The Ordinary dividend is reduced from 5% to 4%, but in order to pay this it is necessary to reduce the carry-forward by £1,239.

In the following statement we set out the manner of distributing the profits for each year since 1909:—

	£	£	£	£	£	£	£
Ordinary dividend	14,545	16,783	21,199	20,421	20,000	20,000	21,171
Depreciation, &c.	6,001	5,839	9,245	9,274	8,671	8,972	6,579
Appropriation, pref. stock, &c.	—	—	1,609	10,186	9,609	10,728	8,511	8,500
Net profit	21,546	22,622	32,053	39,881	38,280	39,700	36,261	36,250
Pref. dr. 5%	10,000	10,000	10,000	10,000	10,000	10,000	10,000	10,000
	10,761	18,622	25,053	25,204	23,637	20,744	18,772
Ordinary dividend	12,000	15,000	18,000	18,000	18,000	16,500	15,000
	—	—	—	(6%)	(6%)	(5½%)	(5%)
	−1,239	3,622	7,053	7,304	5,637	4,244	3,772
To reserve fund	—	500	5,500	5,000	3,202	3,000	3,000
	−1,239	3,122	1,553	2,304	2,435	1,244	772
Amount brought forward	12,482	11,243	11,015	8,711	6,276	5,032	4,260
Carried forward	11,243	14,365	12,568	11,015	8,711	6,276	5,032

The outlook remains uncertain, and the Company can scarcely expect to do any more than maintain the current year's profits at last year's level, and, on the whole, the Ordinary shareholders would do well not to anticipate a repetition of even the 4% that was paid for last year; and it may be added that the Chairman has indicated the possibility of passing an interim distribution. The £1 Ordinary share may be obtained at about 13*s.*, while the £1 Preference share stands at 15*s.* 6*d.*

HUMBER, LIMITED.

A VERY considerable advance in profit is shown by this cycle and motor-car Company as a result of the trading to August 31, 1915, the profit rising from £36,318 to £80,791. The demand for the Company's ordinary production has been far beyond the available capacity of the works, after allowing for the great reduction in the output of cars and cycles in consequence of the major part of the machinery being devoted to War Office work. As from September 1, 1915, the factory was placed under Government control, and very little work except for the Government is now possible. After providing for depreciation there is a net profit for the past year of £64,146, as compared with £23,513 for the previous year. The Company was thus able to pay off two years' arrears of Preference dividend, leaving a further two years still to be provided for, while £10,000 was placed to a buildings reserve, and the balance of £14,367 was added to the carry-forward, bringing it up to £48,659. Herewith we set out the profits for each of the past three years:—

	1915.	1914	1913
	£	£	£
Profit on trading	80,791	36,318	69,115
Other income	1,037	1,488	1,442
Gross profit	81,828	37,806	70,557
Interest, directors' loans, &c.	8,378	7,622	11,656
Depreciation ...	9,304	6,671	8,809
Net profit	64,146	23,513	50,092
Pref. dividend (5%)	39,779*	19,890	19,890
Reserve	10,000		
Balance	14,367	3,623	30,202
Brought forward	34,292	30,669	467
Carried forward	48,659	34,292	30,669

* Arrears (5%).

The Ordinary shares have received no return since 1907, and, as already indicated, the Company has been for some time past in arrears with its Preference dividend. In the circumstances, therefore, it would appear that the provisions of the excess profits duty will bear rather hardly on the Company, unless the directors are able to satisfy the tribunal that special circumstances must be taken into consideration. Doubtless this will be done. It is probable, however, that as a result of the current year's labours it will be possible to wipe out the whole of the arrears of the Preference dividend, and thereby bring nearer a resumption eventually of Ordinary dividends.

THE KHAKI BOOM.

A SUBJECT that has commanded much attention during this period of war has been the Government requirements of textile products. This matter has been emphasised during recent weeks by the placing of large orders for khaki clothes by the Allies with United States manufacturers. Whether the five million yards have been given out by the Italian or the Russian Government is not really clear, one section of the trade asserting one thing, and another the opposite. But that is of little importance, the great fact being that something like that quantity of khaki has been placed, the annoying thing being that it could have been easily tackled in West Riding manufacturers, and thereby at least a month could have been saved in delivery and fully 6*d.* per yard in price, and it is not yet actually known why the Allies went across the Atlantic to place their orders. Some assert that the officials went abroad under a misconception, believing that if the orders came to the West Riding [illegible] reasonable time, it being generally supposed that all firms alike were overwhelmed with orders. Such is not the case by any means, and we are confident that Huddersfield manufacturers could easily have done full justice to such an order, both from the standpoint of delivery and price. That our own War Trade Department was not consulted has caused both surprise and annoyance in manufacturing circles.

The textile industry to-day is very differently situated from what it was six months ago, particularly in regard to the khaki business. It is now fully four months since the writer remarked in these pages that there were no signs of any further khaki orders being placed for soldiers' uniform serge, owing to there being heavy stocks in the hands of the Government. Succeeding events have fully verified that statement, and according to a recent War Office memorandum it is very unlikely that new contracts for khaki cloth will be given out, except to the regular manufacturers who have made for the War Office for many years. It will be remembered that twelve months ago any manufacturer capable of producing a passable khaki piece could obtain a decent order, but when those contracts were executed they were not favoured with new orders. We are in a position to say that even the present recruiting boom is very unlikely to lead to new orders being placed with what we call outside firms, it being the regular manufacturers, who have made for the War Office for years, who will be called upon to deal with the supplying of the needs of our Army. There is also one more important fact, which should be made known to all manufacturers, namely, that future contracts will be for serge made from worsted warp and woollen weft, all solid worsted serge, such as the troops have been wearing during the recent summer, being largely unsuitable for winter wear. We fully endorse the attitude which the officials of the British Government have taken up in demanding that our soldiers be clothed in something solid and warm, and to get the maximum heat-creating properties in a cloth it must be made either from all woollen yarns or a combination of a worsted warp and a woollen weft, the piece being well milled before being finished.

The recent War Office memorandum sheds wonderful light upon the purchases of cloth and other woollen goods required for military purposes, and below we give figures showing the quantities of khaki, riding cloths, flannel shirtings, &c., which have been purchased by the War Office during the period of the War:

Description	Yards
Tunic cloth (serge drab mixture)	22,222,320
Trousers cloth (tartan drab mixture)	19,039,025
Greatcoat cloth	9,670,662
Bedford cord, barathea, and whipcord	5,856,851
Flannel shirting (silver grey, grey and drab)...	44,692,743
Flannel shirting (hospital, white)	4,592,733
Serge, hospital blue	2,415,000
Highland tartan	640,604
Total	109,129,938

According to the last return it appears that American manufacturers were favoured with orders for four and a half million yards of khaki cloth, these purchases being made in December and January last, at a time when there was a great need for supplying the troops as quickly as possible. It appears that the quantity of khaki cloth, including serge, tartan, greatcoat cloth, Bedford cord, barathea and whipcord rejected upon inspection since the outbreak of the War amounted in the aggregate to one and a half million yards. This represents 2½% of the total quantities ordered, and must be regarded as very slight. We fully endorse the long-adopted methods of the War Office in submitting to a thorough test all cloths tendered before accepting deliveries from any party.

Another very useful table published by the War Trade Department shows the quantities of blankets and rugs, including the principal articles of hosiery, which

have been purchased by the War Office during the period of the War; the particulars are as follows:—

Undervests	3,858,797
Drawers, woollen	11,797,479
Drawers, cotton	3,412,363
Cardigans and jerseys	4,990,123
Cap comforters	6,759,680
Body belts	3,711,320
Gloves, worsted (pairs)	2,604,834
Blankets, general service	11,565,622
Socks, worsted (pairs)	36,033,523
Blankets, saddle	641,928
Horse-rugs	1,144,155

Since the above particulars were furnished other contracts have been placed, particularly for hosiery, fabrics, and the placing recently of a good million yards of 26-oz. cloth by the Russian Government shows that British manufacturers may expect our Allies to look to them first for supplying all future requirements. The granting of licences for the export of crossbred wool and tops has created a very different feeling in the home trade, and no one can now expect to buy as reasonably as they could have done a good month ago. No doubt it was a right move to grant licences for sending these materials to our Allies. Some shipments have been made both to the Netherlands and Scandinavia, and the granting of licences for export has certainly saved the English clip from slumping. Possibly by the time our own Government is prepared to give out further khaki contracts the next New Zealand clip will be on the market, but in the meantime there is little prospect of new khaki contracts of any magnitude being placed.

Since writing the above we hear on unquestioned authority that the Russian Government representative in Bradford has this week again been placing further khaki orders for a 26-oz. cloth at 5s. 9d. per yard. There are also further inquiries among Yorkshire manufacturers for riding-breeches, presumably for our own Government, there being as yet no real surplus of Bedford cords and barathea cloths, which have been found so serviceable by the Royal Field Artillery. There is every prospect of the present khaki boom continuing; in fact mills generally are exceedingly busy throughout the whole of the United Kingdom, with the exception of a few of the high-class worsted manufacturers of Huddersfield. All hosiery firms are also inundated with orders and work.

AMERICAN COTTON.

LIVERPOOL: Thursday.

DURING the past fortnight our market has shown a hardening tendency, and to-night's closing rates show a gain of nearly 20 points for American deliveries, while Egyptian have been relatively easier, and prices for this growth are quoted at a few points decline. To-night's closing quotations (the highest of the fortnight) are January-February delivery, American 7.02*d*., and January Egyptian 7.55*d*.

The hardening tendency was held last week in check by the disposition of Southern holders in America to sell their cotton, and some of our local importers were able to book some very fair lines, with the result that this market was called upon to absorb a considerable quantity of hedges put out against these purchases. The rise in freights, however, put this market and America out of touch again. The rate of freight now demanded for December shipments from Gulf ports to Liverpool—180 cents per 100 pounds—necessitates a further widening in the parity between the two markets before importing can again become practicable. The inability of importers to buy this week has left our market short of "ring" contracts, and the normal daily demand for covers against spot sales and spinners' calls has proved in excess of the supply, and consequently buyers have had to pay advancing rates. The difference between Liverpool and New York for winter months is now running over 200 American points, and if our market [illegible] it would seem that this difference must widen further. The unusual financial facilities now at the disposal of planters to enable them to hold their cotton until they can secure a satisfactory price places them in a very strong position, and removes any necessity for forced sales. InLiverpool a good deal of our surplus from last season has gone into consumption, and unless our supplies are replenished by fresh imports the visible supply figures for this country will become bullish. The world's supply is, we believe, ample for the world's requirements; but if a suitable distribution is to be made among the consuming countries, prices must be relatively readjusted so as to enable this country, and those Continental nations who can still import cotton, to attract sufficient supplies to provide for the requirements of their spindles. When the tussle is between a strong holder and a needy buyer, as a rule the latter has to comply with the demands of the former.

The Census Ginners' Report, issued on Tuesday, gave the amount of cotton ginned up to November 13, exclusive of linters, as 8,778,000 bales, against 7,384,000 last report and 11,671,000 for the same date last year. The decrease, compared with last season, is general throughout all the cotton States. The report confirms crop estimates of 12,000,000 bales, and those who took an extremely pessimistic view of crop prospects, and talked of a yield of only 10,000,000, or even less, have now nearly secured their crop. The report, being in close approximation to market expectations, did not occasion any change in values.

A very fair daily business continues on the spot at steady rates. Medium grades round about middling are worse to buy, the "points on" stiffening against the buyer. Good staples are still in demand, but for low qualities there is considerable irregularity, and here and there parcels are offered at very cheap rates. A large amount of cotton has been forwarded to the trade, railway and canal facilities having improved for

the time being. Quite a considerable proportion of the cotton recently purchased has been returned as being bought for export.

Correspondence.

THE NEW FRENCH LOAN—IS IT FREE FROM TAXATION?

TO THE EDITOR OF "THE STATIST."

SIR,—It appears to be generally believed that the new French Loan will be "exempt from taxation" in the full sense that would ordinarily be attached to the phrase in this country, so that, for example, the new Loan will be free from French income tax. There is, however, reason to believe that the phrase is used with a much more limited meaning, and I would refer your readers to the following extract from *Le Matin* of the 13th instant. (The italics are not in the original.)

"Le 5% sera garanti net pendant quinze ans et sera exempt d'impôts. 'Le question de savoir,' précisa le ministre des finances, 's'il est bon que *la rente* soit soustraite à l'impôt ne se pose pas en ce moment. Nous déclarons que *le titre* est exempt d'impôts, mais cette exemption ne s'applique pas aux impôts qui frappent le porteur ou le revenu. C'est là une déclaration que je demande formellement à la Chambre de confirmer par son vote afin qu'il n'y ait pas d'équivoque.'"

Translation.

The following is the definite statement of the Finance Minister: "The question whether it is desirable that the *Rente* should be subject to taxation does not arise at the moment. We announce that the *bond* is exempt from taxes, but this exemption will not apply to taxes which fall on the *holder* or the *income*. I ask the Chamber formally to confirm this declaration by its vote, in order that there may be no possible misunderstanding."

So far as I am aware the formal announcement in the *Journal Officiel* in no way modifies the Finance Minister's statement, and, if so, it would appear that while the new bonds are not liable to stamp duty, &c., nor to taxation as personal property, there is nothing to prevent the State from taxing the *income*, either by deduction or in the hands of the holder.—I am, Sir, your obedient servant,

G. J. LIDSTONE.

Scottish Widows' Fund Life Assurance Society,
9 St. Andrew Square, Edinburgh,
November 23, 1915.

[The official statement that the loan is free of all taxation is very definite, and as far as foreign holders are concerned the question raised in this letter does not apply.—ED. STATIST.

TO THE HOLDERS OF THE FOLLOWING SECURITIES OF THE

MISSOURI PACIFIC RAILWAY COMPANY:

Convertible Five per Cent. First and Refunding Bonds,

Four per Cent. Gold Loan Bonds,

CAPITAL STOCK,

and Securities of the other issues dealt with in the plan of readjustment.

In order to preserve the Missouri Pacific system from the evils and losses incident to a prolonged receivership the plan of readjustment should be promptly consummated. The property does not require the extensive physical rehabilitation or the elimination of burdensome entanglements and contracts which are the usual causes of long railroad receiverships. What is required is (a) the cash (approximately $41,000,000) for immediate needs; (b) such reduction in fixed charges as will bring them within a proper margin of the demonstrated earning capacity of the property; and (c) the creation of a new security to deal with the obligations maturing during the next five years (approximately $79,000,000) in so far as they do not fall within the cash provisions of the plan, and to provide for future corporate requirements.

Manifestly these results can be accomplished only by an early reorganisation, and to this end the prompt co-operation of the holders of the various classes of securities affected by the readjustment is essential. They are accordingly urged for the protection of their own interests, and in order to insure the early restoration of the, property to the management of a solvent company, to deposit their securities under the plan of readjustment as promptly as possible, and, in any event, on or before December 15, when the time for deposit under the plan expires and after which it is intended to proceed actively to carry the plan into effect.

There can be no doubt that radical changes in the financial structure of the company as called for in the plan of readjustment are essential to secure the needed results. Although the anticipated improvement in business should result in better earnings than those of the last fiscal year, which failed to meet the interest charges by about $1,250,000, the margin between earnings and fixed charges, which is absolutely essential for the restoration of the company's credit, cannot be assured without the reduction in interest payments sought to be accomplished by the conversion of the Convertible Five per cent. Bonds and the Four per cent. Gold Loan Bonds into Preferred Stock (or Income Bonds). Under the plan the stockholders provide the $41,000,000 of cash for immediate requirements without imposing any burden upon the holders of these bonds; for while the stockholders receive a Four per cent. Bond equal in face amount (but not in market value) to the cash which they furnish, the position of the holders of the Convertible Five per cent. Bonds and the Four per cent. Gold Loan Bonds in relation to earnings is not disturbed in any material degree, because upon the consummation of the plan the charges ahead of them upon the system, taken as a whole, are not augmented, while the net earning capacity of the property should be substantially increased.

The attention of holders of the Missouri Pacific Four per cent. Gold Loan Bonds is called to the fact that default has been made in the payment of the interest on the Iron Mountain Company's First and Refunding Mortgage Six per cent. Bonds, and that proceedings have been instituted to foreclose the mortgage by which those bonds are secured. Their attention is also called to the importance of preserving the traffic relations between the Iron Mountain and Missouri Pacific Companies.

Copies of the plan of readjustment and of an analytical statement relating thereto may be obtained from the readjustment managers, any of the depositaries or sub-depositaries, or the secretary of any of the committees.

The certificates of deposit for Convertible Five per cent. First and Refunding Bonds, for Four per cent. Gold Loan Bonds, for Trust Five per cent. Bonds due 1917, for First Collateral Mortgage Five per cent. Bonds due 1920, and for Stock, have been listed up on the New York Stock Exchange. About 40 per cent. of the Convertible Five per cent. Bonds and 40 per cent. of the Four per cent. Gold Loan Bonds have already been deposited under the plan.

New York, November 24, 1915.

KUHN, LOEB AND CO.,
Readjustment Managers.

ALEXANDER J. HEMPHILL,
Chairman, Five per Cent. First and Refunding Mortgage Bondholders' Committee.

FRANK N. B. CLOSE,
Chairman, Forty-year Four per Cent. Gold Loan Bondholders' Committee.

JAMES N. WALLACE,
Chairman, Stockholders' Committee.

MEETINGS
OF PUBLIC COMPANIES.

ANGLO-EGYPTIAN BANK.

PRESIDING at the meeting of the Anglo-Egyptian Bank on November 23, Mr. H. A. Richardson said it was his good fortune to present to the shareholders the strongest balance sheet he had ever put before them. They maintained their dividend, and out of the surplus profits had provided in full for depreciation of securities, for all ascertained war losses, and put aside £20,000 for losses that were pretty sure to arise as the War went on. This result had been largely due to a very gratifying increase in current accounts, the cotton crop having been sold much better than seemed likely, and to the fillip that the large number of soldiers located in Egypt had given to business generally. It was a feather in their cap that they had kept the military accounts in Egypt. In Malta and Gibraltar, where they had the Treasury accounts, they had done very useful work. Under contract they had to supply all the funds required there, and in Malta, owing to the War, the requirements had been very large indeed—double what they were before the War. The Malta branch had met all these demands. The new branch at Khartoum had shown encouraging profits. As regarded Egypt, a year ago it looked very gloomy, with cotton at 5*d.* per pound, and not readily saleable at that, but Egypt had, after all, come through the year much better than might have been expected. The revenue showed a deficit of only £1,700,000, no very serious matter in itself. For the first few months of the War trade was at a complete standstill, and losses faced everyone, yet, so soon as the Government fixed a minimum for cotton values, things began to improve all round, the moratorium was brought gradually to an end, and the settlement of cotton contracts on the local exchange—which promised to be a serious source of danger and difficulty—was ably and satisfactorily arranged. Paper took the place of gold, and readily passed into currency, proving an excellent counter for marketing the cotton crop, while the large arrivals of soldiers put money freely into circulation. Five millions sterling was transferred to Egypt between February and August, to the great advantage of importers and others, and with rising prices for cotton exporters were in most cases able to make good their losses of the earlier months. On the other hand, the cultivators of cotton had suffered severely, though there might be some little compensation in the cereal crop, and sugar cultivators had done exceedingly well. The Bank was fortunate in only having £10,000 locked up in enemy countries.

ARGENTINE GREAT WESTERN RAILWAY COMPANY, LIMITED.

THE ordinary general meeting was held on November 25 at Winchester House, Old Broad Street, E.C., the Hon. Arthur Stanley, M.P., presiding.

The Secretary (Mr. J. T. Dillon) read the notice convening the meeting and the report of the auditors.

The Chairman said he was sorry to have to inform the meeting that Lord St. Davids was not able to be present, owing to an attack of influenza. He had, however, sent a copy of the remarks which he would have made had he been there, and these he (the Chairman) would read : "The total receipts of the railway for the past year showed the large decrease of £244,187—namely, from £1,164,738 in the previous year to £920,551 in the present year, this decrease being equivalent to 20.96%. Taking into account the number of miles open for traffic, these receipts are the lowest for the past 10 years. As stated in the directors' report, the decrease is attributable to the war, and to the consequent disturbance of credit following upon the depression which existed in Argentina prior to the War. At the beginning of the War the banks called in their loans and declined to make further advances. The big wine bodegas, being fully stocked with wine, owing to greater production and reduced consumption, refused to buy more grapes from the small growers. The consequent scarcity of money in circulation caused much increase in the depression of trade already prevailing.

Decrease in Passenger and Goods Traffic.

The receipts from passenger traffic and from general goods are fairly accurate indications of the condition of trade, and it will be seen that the former shows a decrease of £107,354 and the latter a decrease of £53,142. These two items together account for more than 65% of the total reduction in the receipts. The next largest item in reduced receipts is in posts. This is in consequence of the decrease in the plantation of new vineyards, due to trade depression and to the over-production of wine in previous years. The Government of the Province of Mendoza has not only discouraged the plantation of new vineyards, but has taken steps to put out of production some of the existing vineyards in order to reduce the supply of wine to a figure nearer to the probable consumption. One or two of the shareholders have asked questions with regard to the reduction of the dividend. By the arrangement with the Buenos Ayres and Pacific Railway Company, the Ordinary stock of this Company receives a similar dividend to that paid on the Second Preference stock of the Pacific Company. That Preference stock is not cumulative, and is entitled to receive a dividend according to the amount of profits actually earned during each year, and as the profits of that Company are sufficient for the distribution of £2 16*s.* 6*d.* per cent. on the Second Preference stock, we receive the amount required to pay a like dividend on the Ordinary stock of this Company. One shareholder has written assuming that if this Company had been working its own line it would have been able to pay a larger dividend on its Ordinary stock. It is difficult to arrive at an exact calculation of what our line would have earned if working on its own account, but I have had some figures taken out which show that, allowing for the traffic which has been deflected from our old main line to the new route of the Pacific Company *via* La Paz, and allowing for the larger percentage of working expenditure which our line must always show owing to its distance from the coast, the bad water at many parts of the line, and for other reasons, the Ordinary stock of this Company for the year with which we are now dealing would not have received any dividend at all, and there would have been a reduction of the dividend on the Preferred stock. Over the eight years during which the Buenos Ayres and Pacific Company has worked our line, the figures which I have mentioned show that generally the arrangement has proved to be an equitable one between the two companies, as in four out of those eight years the Argentine Great Western Railway would have earned a larger dividend than the amount paid to it by the Pacific Company, and in the other four years it would not have earned an amount equivalent to that which it has received from the Pacific Company and distributed in dividend. Up to the end of 1914 the advantage was slightly in favour of the Pacific Company, but with this year's results added the advantage is distinctly in favour of this Company. The closing of the Transandine line for through traffic for some months is another factor which has helped towards the decrease in receipts. Capital expenditure during the year has been almost entirely suspended, with the result that, owing to the large amount of materials returned to stores from the extensions which were in construction, there is a credit in the capital expenditure account of £72,040. The investments continue to be shown in the balance sheet at cost—namely, £159,923. Valuations have been made of these investments as at June 30 last, so far as it has been possible to make valuations in these times, and I have been asked by the auditors to state that they show a depreciation on the cost price of the investments of 13½%.

Prospects Excellent.

As to the present prospects, the General Manager reports that these continue to be excellent. The financial conditions of Argentina are improving, and with that improvement, which should be general all over the country, it is reasonable to expect an increased demand for the products of those parts of the country which our railway serves. According to late advices, the selling price of wine this year has increased. Experiments are being made in the districts served by our railway to grow cereals and vegetables, and these show a fair promise of success. Some 60,000 hectares of wheat are reported to have been sown in the provinces of Mendoza and San Juan. Up to the date of the latest advices the receipts of our line show an increase this year of more than 13% over the corresponding period last year, while the receipts of the Buenos Ayres and Pacific system show an increase of £311,000, or more than 23% over last year's figures. According to a cablegram lately received from the General Manager, the following is the position : "Cuyo prospects excellent. Vineyards very satisfactory; contracts grapes being made, favourable prices."

The Chairman then moved the following resolution :—"That the directors' report and audited accounts for the year ended June 30, 1915, be received and adopted, and that a balance dividend of 2½% on the Preferred stock and a dividend of £2 16*s.* 6*d.* per cent. on the Ordinary stock of the Company be and the same are hereby declared for the year ended June 30, 1915."

The Hon. Charles N. Lawrence seconded the motion.

The Chairman intimated that he would be pleased to answer any questions that shareholders might wish to put.

The Agreement with the Pacific Company.

Mr. W. H. Skeel: Is the present agreement under which we are working with the Pacific Company a permanent agreement, or is it for a term of years?

The Chairman: The answer to the question is that it is renewable every 20 years.

The motion was then put and carried unanimously.

The Chairman next moved: That the Hon. Charles N. Lawrence be re-elected a director of the Company.

Mr. C. M. Rose seconded the motion, which was unanimously adopted.

The Hon. C. N. Lawrence proposed the re-election of Lord St. Davids as a director, which was seconded by the Chairman and unanimously agreed to.

On the proposition of Mr. T. E. Nalty, seconded by Mr. Cross, Messrs. Deloitte, Plender, Griffiths and Company were appointed auditors of the Company for the ensuing year at a remuneration of 50 guineas.

Mr. Nalty proposed that the best thanks of the meeting be given to the Chairman for presiding, and for the very lucid statement he had made with regard to the affairs of the Company.

Mr. Johnston seconded the vote, which was unanimously accorded.

The Chairman, in acknowledging the compliment, expressed the hope that Lord St. Davids would be in his usual position at the next meeting, and that he would be able to give the stockholders a more cheerful account than has been submitted on the present occasion.

The proceedings then terminated.

CASTNER-KELLNER ALKALI COMPANY, LIMITED.

THE twentieth ordinary general meeting was held on November 24 at the Cannon Street Hotel, E.C., the Right Hon. G. W. Balfour (the Chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that it was with great pleasure that the directors were able to come before the shareholders with figures so favourable. The net profits for the year, after the customary ample allowances for repairs and maintenance, amounted to £260,804, as against £174,150 last year, or an increase of no less than £85,654. Adding the amount carried forward from last year, and deducting the Debenture interest and the interim dividend paid in May, they were left with an available balance of £211,151. The directors recommended the appropriation of this balance as follows: £50,000 to depreciation reserve, increasing that account to £437,500; £10,000 to general reserve, increasing that account to £79,364; £90,000 in payment of a final dividend of 12%, making, with the interim dividend paid in May, 20% for the year, payable on the 30th instant, leaving £61,151 to be carried forward to the next account. As regarded the depreciation reserve, the sum which they proposed to place to that reserve on the present occasion was £50,000, whereas last year and the year before the amount so placed was £32,500. The increase was due to the large extensions which had recently been made to the Company's plant and machinery. They had not thought it necessary to recommend that more than £10,000 should be added to the general reserve this year as compared with £20,000 last year. It would have been quite easy, had they been so minded, to have added the same sum to the general reserve this year as last year without interfering with the appropriation to dividend. In addition to the investments in the general reserve account there were other investments which, taken at cost price, represented a value of over £236,000. Some of these were trade investments, upon which no exact value could be placed, although they were certainly worth more than they cost, but the greater portion consisted of thoroughly sound marketable securities quoted on the Stock Exchange.

Strong Financial Position.

The financial position of the Company was a very strong one. The shareholders might rest assured that if it were less so the directors would have considered it their first duty to go on building up reserves rather than increase the dividend. As things were they were satisfied that the handsome dividend now proposed had been thoroughly earned and could be paid without entrenching in any degree upon those principles of conservative finance to which the board had consistently adhered throughout the history of the Company. The object of the large carry-forward of £61,151, as compared with £18,402 last year, was to provide for the payment of whatever sum might become due from the Company in respect of the tax on excess profits under the provisions of the Finance Bill now before Parliament. What the amount would be they could not yet say with anything like complete precision, but whatever it might turn out to be the directors felt certain that the carry-forward would not only cover it, but leave a large margin to spare. The real reason for the increased profits was to be found in the capital expenditure of £215,000 which had been made between 1913 and 1915 on land, buildings, plant, machinery, &c. The new plant only began to make itself felt in the beginning of the financial year under review. The extra profits were due not to increased prices or to any extra profits made out of Government contracts, but to the foresight of the directors—and, he might say, a certain amount of good fortune—in very largely increasing the plant at the right time. This had enabled them to carry out all their contracts without inconveniencing any of their customers, and he wished the shareholders to understand that such of their products as had been required by the Government had been supplied at prices which left them no more profit, if as much, than they would have derived from their sale in the ordinary course of business. He congratulated the shareholders on the favourable results, and stated that he saw no reason why the coming year should not be as prosperous as the past one.

Sir Henry R[illegible] seconded the motion, which was carried unanimously.

MESSINA (TRANSVAAL) DEVELOPMENT CO., LTD.

THE annual ordinary general meeting was held on November 25 at Salisbury House, E.C., Mr. H. C. Hoover presiding.

The Chairman stated that Mr. Leslie, the Chairman of the Company, was unable to be present owing to indisposition, but had prepared the speech which he would have delivered had he been present. In the course of his speech Mr. Leslie said that the shareholders were meeting under far more favourable circumstances than the most optimistic of them could have anticipated when they met a year ago. On June 30, 1914, the current liabilities of the Company exceeded the liquid assets by about £75,000, whereas on June 30, 1915, the liquid assets exceeded the current liabilities by about £31,000. They had been able to clean up the balance sheet by writing down dead assets, and there was not much now left to do in this respect. With regard to the various security assets, they had to face the fact that present conditions were unfavourable to the realisation of such assets and also to their value. As to the present position of the Messina Company, the overdraft at their London bankers, which at the end of 1914 amounted to about £85,000, had been reduced to £27,000 at the date of the present balance sheet. It had since been paid off, and they now had a credit balance there of about £49,000. They had also a quite considerable credit balance in South Africa on current account, the only money now owing in South Africa being the advances made from time to time on products in transit, which was repaid out of the first realisations of this metal as it came forward.

The Mining Position.

As to the position of the mine itself, there was some difference of opinion as to the position and value of the ore reserves, and Mr. Kuehn was sent out to check the matter. Mr. Leslie said that he was somewhat disappointed with Mr Kuehn's estimates, and that, in his view, was the weak point of an otherwise magnificent position. They were taking energetic steps, now that the financial position admitted of this policy, to develop the mine itself and some adjacent prospects on the property. It was too early to speak of results at present, but the prospects were quite promising, and they had great hopes of improving the position of the ore reserves by these means, because Mr. Kuehn had not in his estimate of the reserves included any tonnage for increase in depth or laterally, or for surface prospects. They knew of no reason why the mine should not go down to much greater depths than they had yet reached. In fact, it was all in favour of continuity in depth that the quality of the ore in the ninth and tenth levels had not changed, and that the same rich bands of bornite and chalcopyrite appeared to make up the ore in the pay shoots. It was true that the two principal ore bodies, the bonanza hanging wall and foot-wall, showed a noticeable decrease in size, but this phenomena of decreased width had happened in some of the higher levels and might happen again; and they did not attach great importance to it for the next 200 feet or 300 feet. It led them, however, to suppose that the present rate of output might not be indefinitely maintained, but, as they were deliberately pressing the mine output in view of the present price of copper, they must not complain or be disappointed if they had, say, in about twelve months' time, to be content with a lower output than they were now getting.

Improved Metallurgical Methods.

Mr. Emery went out to Messina in August and formally took up the position as General Manager in December of last year, and he had succeeded in effecting the following improvements; he had increased the sorting and milling capacity of the plant from 20% to 25%, so that it could now handle 10,000 tons a month. This enabled them to press the mine output at a time when copper prices were favourable. He was, they believed, well on the way towards getting an extraction of 90% of copper from that ore, as compared with an extraction of 74% obtained in December last. This increased extraction, moreover, had been obtained from a lower-grade ore than was available in December last, and, calculated on an annual output of 5,000 tons of copper, was equivalent to an additional profit for the Company, at present prices, of something approaching £60,000 per annum, as compared with their former milling practice. It would be gathered that the perspective of the whole proposition had changed since last year. Owing to improved metallurgical methods, they were obtaining more copper from the [illegible] owing to decreased ore reserves, additional capital expenditure must be curtailed to its smallest possible dimensions. The question, therefore, of erecting a smelter had vanished. There were some points about the future which they had to keep steadily in mind, such as the taxation question, the contingent liability under the railway guarantee to the South African Government, the redemption of Debentures, which commenced next year, and the current financial requirements of the Company under present uncertain conditions. The question of dividend must be subservient to all these considerations. They were hopeful, however, that in the early part of next year it would be possible to declare an interim dividend, should no unforeseen change in the position take place. The Chairman added that the remarks of Mr. Leslie expressed the views of the entire board, and he concluded by moving the adoption of the report and accounts.

Mr. R. J. Frecheville seconded the motion, which was carried unanimously.

CONSOLIDATED SIGNAL COMPANY, LIMITED.

The fourteenth ordinary annual general meeting was held on November 25 at the Westminster Palace Hotel, S.W., Mr. S. P. Wood, the Chairman, presiding.

The Chairman, in moving the adoption of the report presented with the accounts, said: Signalling is one of the first things on which railway companies economise in times of financial disturbance, and about the last on which they commence expenditure, and present times are not an exception with regard to home, Colonial, and foreign railways. We have turned our efforts towards the production of war materials, but as only a portion of our subsidiary companies' plant and machinery was suitable for such new work we have had to adapt and add to it as far as possible, and also to adopt new methods of manufacture. Notwithstanding the assistance of war-work orders, the general turnover has been very largely reduced, and that turnover being of a varied and different class from our standard manufactures normal results could not be attained. The gross profits of the subsidiary companies in respect of the year ended June 30 amounted to £36,329. After deducting Debenture and loan interest and the usual depreciations, there remains a net profit of £7,162, which, togther with £17,578 of their unappropriated profits—a total of £24,741—is being distributed by the subsidary companies, of which this Company receives £18,000.

This amount is credited in the Company's profit and loss account, and, after payment of the expenses of the Company, there remains a profit for the year of £18,298, which, added to the amount of £4,529 brought forward from last year, makes a sum of £22,827 available for distribution. The interim dividend on the Preference shares absorbed £5,890, and we have placed a further £6,000 to our reserve account, making that reserve £28,500. We now propose to pay the balance of the Preference dividend, absorbing £5,461, leaving £5,475, which it is proposed to carry forward. Doubtless the first thing which may strike some shareholder is that there are ample undivided profits which could be used to pay an Ordinary dividend, and that is so, and might have been proposed with safety in other than war times. Your directors have given this point very careful and weighty consideration, and, following the policy laid down of assuring as far as possible that our factories shall be kept going concerns, they unanimously came to the conclusion that it would not be in the best interests of the shareholders as a body that the accumulated profits should be further drawn upon. A large part of the undivided profits is used in the businesses of the subsidiary companies and is, therefore, not liquid.

Mr. Walter Holland seconded the motion, which was unanimously adopted.

AUSTRALIAN MERCANTILE, LAND AND FINANCE COMPANY, LIMITED.

The fifty-first annual ordinary general meeting was held on November 25 at Cannon Street Hotel, E.C., Mr. Robert Henryson Caird (managing director) presiding.

The Chairman said the year they had passed through had been one of grave anxiety. When war broke out no one knew when bills would be met, and no one could tell how prices for wool would go, or even whether wool, which was their chief product, could be got to market at all. Until January of the current year it had looked as though the gloomiest forebodings would not be too black. Then, however, things began to mend. Prices were now on a satisfactory level, and, though there were still many difficulties to contend with, among them congestion at the docks, and possible interference with shipping by the Government, on the whole the realisation of the wool clip was being successfully accomplished. He would like to say a word or two as to the adverse legislation in Australia, but he did not want to risk being misunderstood. What he wanted to protest against was the imposition of taxation of a penal character, in which category he included the Federal land tax, imposed when revenue was not required, and with the avowed intention of forcing large holdings to be sold. It was of so burdensome a character that it had forced them to realise a large part of their freehold properties, on which they had expended great sums in development, and where their continuance as owners would have been of direct benefit to the country, as they would have gone on increasing its productivity. Recently there had been the Federal land tax on leaseholds, not levied on income, but on the capital value. There were also land and income taxes in the various States, and recently there had come the Federal progressive income tax, running up to 5s. in the pound, and nominally a war tax. The inequity of that tax was that they would have to pay on the interest on their Debenture debt, which was not a profit at all. The general financial position in Australia also gave ground for anxiety. The continuance of lavish expenditure on public works, some not of immediate utility, necessitated continual Government borrowing, so that by June 1916 the total indebtedness, for a population of under five millions, promised to be well over £400,000,000. Dealing with the items in the balance sheet, the Chairman claimed that the figures showed that safety was their first consideration, while, subject to that, they had kept their funds well employed. With their monetary resources and their tried and trusted staff of officers, they did not fear the forces of Nature. Droughts would always have to be combated in their fight to get returns from a country that, without capital, would still be desert. They did not fear financial crises, nor did they greatly fear the effect of the War. The unknown quantity was the extent to which adverse legislation in Australia would continue. He concluded by moving the adoption of the report and accounts, which was seconded by Mr. F. A. White and carried unanimously.

Belsize Motors.—Final dividend on Ordinary at the rate of 12% per annum, less tax, making a total distribution of 10% for the year.

Cardigan Steamship Co.—Dividend of 2s. per share, less tax.

Hovis-Bread Flour.—Interim dividend at rate of 6% per annum on Ordinary.

Kellner Partington Paper Pulp Co.—Ordinary dividend for past year 17½%, tax free.

P.P.K. (Ceylon) Rubber.—Interim dividend of 5%, less tax.

NEW ZEALAND.

A Wealthy Country, Splendid Climate, Fertile Soil, Plenty of Water.

An Ideal country for the farmer, the percentage of grain and lambs being phenomenally high.

New Zealand, a country as large as the United Kingdom, with but a million population, has an annual export of raw products exceeding Twenty Million Pounds sterling.

NEW ZEALAND is rich in COAL, IRON, TIMBER, GUM, GOLD and SILVER.

Total yield of Minerals, over One Hundred and Twenty Million Pounds.

Over Eighteen Million Pounds have been advanced by Government to Farmers and Workers for Improvements and Buildings at a low rate of Interest.

The Railways, 3,000 miles, Telegraphs and Telephones, 124,000 miles, are owned and operated by the State.

New Zealand has the highest wealth-rate and the lowest death-rate in the World.

To those desirous of making a home in a new country New Zealand offers solid advantages.

Excellent Steamship Services are run direct to New Zealand by the Shaw Savill and Albion Company, Limited, New Zealand Shipping Company, Limited, and the Federal and Shire Lines.

Full information is supplied free by
THE HIGH COMMISSIONER FOR NEW ZEALAND,
13 Victoria Street, Westminster, London, S.W.

TRADE PROTECTION OFFICES

(Established 1776),
Bush Lane House, Bush Lane, Cannon St., LONDON.

Status Inquiries made as to the position of Merchants and Traders and others.

PERRY'S GAZETTE & LIST OF CREDITORS
are published Weekly, and are valuable to everyone in business.

Debts recovered and paid over promptly.

Particular attention is called to the fact that this is the only Trade Protection Society that possesses at its offices in London Registers containing full Bankruptcy and other Registered Information, together with Status information FOR THE WHOLE OF THE THREE KINGDOMS.

TERMS from £1 1s. upwards, according to requirements. PROSPECTUS and further particulars on application.

REPORT BY THE COURT OF DIRECTORS OF THE

ROYAL BANK OF SCOTLAND,

To the Annual General Court of Proprietors,

On Wednesday, 24th November, 1915.

The Directors now submit to the Proprietors the annexed Abstract Statement of the Affairs of the Bank at the Second Saturday of October, 1915, with relative Profit and Loss Account, certified by the Auditors.

The Balance of Rest at 10th October, 1914, was		£960,629 12 11
The Net Profits of the year, after providing for all bad and doubtful debts, amounted to		293,731 15 5
		£1,254,361 8 4
The Midsummer Dividend, at the rate of 10 per cent. per annum, *less* Income-tax, required	£89,479 3 4	
It is now proposed to pay a similar Dividend at Christmas, also *less* Income-tax	87,395 16 8	
There has been written off expenditure on Bank Buildings and Heritable Property ...	6,500 0 0	
And applied towards Depreciation on Stocks	270,000 0 0	
From Profits of the Year £110,356 15 5		
From Rest 159,643 4 7		
£270,000 0 0		
		453,375 0 0
Leaving undivided profits at credit of Rest		£800,986 8 4

The number of Stocks and Securities are still subject to the minimum prices fixed by the Government consequent on the War, and the market values of these cannot meantime be accurately ascertained. In addition to the sum reserved from the Profits of the previous year, the Directors consider it advisable to apply £270,000 in writing down the value of the Investments.

In common with other Banks, the Directors subscribed for substantial amounts of the War Loans, which is shown in the increase in British Government Securities held.

The Governor, the Deputy-Governor, the Extraordinary Directors, and the Senior Ordinary Director (Mr. Davidson) all retire at this time, but are eligible for re-election.

Auditors also fall to be appointed for the ensuing year, and Mr. John M. Howden, C.A., and Mr. J. Maxtone Graham, C.A., offer themselves for re-election.

By Order of the Court of Directors,
ADAM TAIT, *Cashier.*

D. S. LUNAN, *Accountant.*

AUDITORS' REPORT.

As Auditors appointed by the Proprietors of The Royal Bank of Scotland, we have checked the Cash on hand at Head Office, Glasgow, and London, verified the cash with London Bankers, the Securities for money at call and short notice, the Government Securities and other Investments, and examined the details of the other Liabilities and Assets set forth in the foregoing Abstract State of Affairs, and we now certify that in our opinion said Abstract State is a full and fair Balance Sheet, properly drawn up, and exhibits a true and correct view of the state of the Bank's Affairs, as shown by the books, at 9th October, 1915.

JOHN M. HOWDEN, C.A., *Auditor.*
J. MAXTONE GRAHAM, C.A., *Auditor.*

["LONDON ISSUE."]

NATIONAL DEFENCE LOAN

OF THE

GOVERNMENT OF THE FRENCH REPUBLIC.

ISSUE OF FIVE PER CENT. RENTES.

Both Capital and Interest will be exempt from all taxes, present and future, of the Government of the French Republic.

Interest payable Quarterly on the 16th February, 16th May, 16th August, and 16th November, the first Coupon (for a full quarter's interest) being payable on the 16th February, 1916.

PRICE OF ISSUE—£3 4s. per Fcs. 100 NOMINAL CAPITAL

(Being the equivalent, at the exchange of 27.50, of Fcs. 88, the price at which the Loan is being issued in Paris.)

Applications, which must be accompanied by a deposit of Seven Shillings per Fcs. 100 applied for, will be received at the Bank of England, Theadneedle Street, London, E.C. Applications must be for multiples of Fcs. 100 nominal Capital (*i.e.*, Fcs. 5 of Rente).

The amount payable in respect of each Fcs. 100 will be required as follows, viz. :—

	£	s.	d.
On application ...		7	—
On, or before, Monday, the 31st January, 1916 ...		19	—
On, or before, Tuesday, the 29th February, 1916 ...		19	—
On, or before, Friday, the 31st March, 1916 ...		19	—
Total	£3	4	— @ Fcs. 27.50 per £ = Fcs. 88

or the whole of any amount applied for may be paid up in full at the time of application by a single payment of £3 : 3*s.* 6*d.* in respect of each Fcs. 100 applied for.

THE GOVERNOR AND COMPANY OF THE BANK OF ENGLAND,

with the consent and approval of His Majesty's Government, are authorised by the Government of the French Republic to receive applications for this issue.

The French Government undertake that the issue shall not be redeemed prior to the 1st January, 1931; but they reserve to themselves the right to redeem the issue, in whole or in part, at any time on or after that date.

Both Capital and Interest, which will be exempt from all French taxes, present or future, will be a charge upon the general revenues of the Government of the French Republic.

The issue will be made in the form of Bonds to Bearer, which may, if desired, be registered or inscribed in the "Grand Livre de la Dette Publique" at the Ministry of Finance in Paris, without payment of any fee.

CONVERSION OF

1. French Government Sterling Treasury Bills due 16th January, 1916.

2. French Government 3½ per cent. Rentes (Redeemable).

3. French Government 3 per cent. Rentes (Irredeemable).

1. French Government Sterling Treasury Bills, due 16th January, 1916, may be tendered in lieu of cash where payment in full for an allotment of this issue is made at the time of application. For the purpose of such payments the Bills will be accepted at the rate of £99 : 3*s.* 3*d.* cash for each £100 nominal of Bills surrendered, being the equivalent of par less interest at 5% from the 16th November, 1915 (the date from which interest accrues in respect of the new issue), to the 16th January, 1916.

2. French Government 3½% Rentes (Redeemable) may be tendered in lieu of cash where payment in full for an allotment of this issue is made at the time of application. For the purpose of such payments the Bonds will be accepted at the rate of £3 : 6*s.* 4*d.* cash for each Fcs. 100 nominal capital (*i.e.*, Fcs. 3.50 of Rente) surrendered.

3. French Government 3% Rentes (Irredeemable) may be tendered in lieu of cash, to the extent of not more than one-third of the total amount payable in respect of any allotment of this issue, where payment in full for such allotment is made at the time of application. For the purpose of such payments the Bonds will be accepted at the rate of £2 : 8*s.* cash for each Fcs. 100 Nominal Capital (*i.e.*, Fcs. 3 of Rente) surrendered. The Coupon due 1st January, 1916, must be detached before Bonds are lodged for Conversion.

A declaration, which is embodied in the Form of Application, will be required in the case of all securities lodged for Conversion, to the effect that they have not been in enemy ownership and have remained in physical possession in the United Kingdom since the outbreak of War, or, where issued subsequently, since the date of issue.

Applications for the Loan may be paid up

1. Entirely in cash;

2. Partly in cash and partly by the exercise of one or more of the above Conversion Options; or

3. Entirely by the exercise of one or more of the above Conversion Options;

provided always that in no case may the sterling value of 3% Rentes surrendered exceed one-third of the whole sterling amount payable in respect of any allotment. In any case in which the sterling equivalent of Securities to be converted does not represent the exact amount required to secure an allotment which is a multiple of Fcs. 100 nominal capital, the additional sum necessary to secure such an allotment must be provided in cash.

In case of default in the payment of any instalment by its proper date, the deposit and any instalments previously paid will be liable to forfeiture.

A commission at the rate of twopence per Fcs. 100 nominal capital will be allowed to Bankers and to Members of the London and Provincial Stock Exchanges on allotments in respect of Cash applications, and applications for the Conversion of French Government Sterling Treasury Bills, made on forms bearing their Stamp. No commission will be paid in respect of allotments resulting from the Conversion of French Government 3½% and 3% Rentes.

Application will be made in due course for the admission to a Quotation in the London Stock Exchange of Bonds of the "London Issue." Such Bonds will not be negotiable in France until after the conclusion of Peace.

The necesasry Forms of Application, viz. :—

1. For Subscriptions by Single Payment, whether in Cash, Securities, or both;

2. For Cash Subscriptions payable in Instalments.

may be obtained at the Bank of England, London, E.C., and at the Branches of that Bank; and at any Stock Exchange in the United Kingdom.

The List of Applications will be Closed on or before Wednesday, the 15th day of December, 1915.

BANK OF ENGLAND, E.C.

By Order,
H. H. NORMAN,
Secretary.

Dashwood House,
9 New Broad Street, London, E.C.,
3rd December, 1915.

THE CHAMPION REEF GOLD MINING COMPANY OF INDIA, LIMITED.

Capital £260,000, in 2,080,000 Shares of 2*s.* 6*d.* each.

At a meeting of the Directors of the Company held to-day, it was resolved to recommend to the Shareholders at the forthcoming General Meeting on the 16th December, that a reliance dividend for the year ending 30th September last of Eightpence per Share (less income tax at the rate of 2*s.* 8*d.* in the £), be declared, payable on the 4th day of January, 1916, to the Shareholders on the books of the Company on this 2nd day of December.

By Order of the Board,
F. H. WILLIAMS,
Secretary.

5 & 6 Queen Street Place,
London, E.C.,
2nd December, 1915.

N.B.—The above Dividend will make a total distribution for the year of 1*s.* 5*d.* per Share, or 50% per cent. upon the Capital of the Company.

Notice of the General Meeting to be held on the 16th December will be given in due course.

The Income Tax of 2*s.* 8*d.* in the £ is arrived at by taking the average rate for the Company's year, viz., 2*s.* 4*d.*, and effecting the necessary adjustment in regard to the tax on the interim dividends paid on the 6th May and 1st September, 1915, consequent upon the increased tax.

LAKE SUPERIOR CORPORATION FIRST MORTGAGE COLLATERAL TRUST FIVE PER CENT. GOLD BONDS.

The Interest Coupons of the above-mentioned Bonds maturing 1st December, 1915, may be presented for payment at the rate of 4·86⅔ at the Bank of Montreal, 47 Threadneedle Street, London, E.C., or at its Branches in Montreal or New York.

Three clear days required for examination.

For Bank of Montreal,
G. C. CASSELS, Manager.

47 Threadneedle Street, E.C.,
1st December, 1915.

MONEY.

THE process of financing the Government until the next War Loan is issued early in the New Year still governs the Money market, and is, of course, responsible for the steady export of gold that goes on from day to day and from week to week notwithstanding the American credit. At the present time practically no money is being collected from the nation for the war, and almost the whole expense is being covered by bankers' loans or by issues of currency. Consequently the expenditure of the nation is being maintained at a very high level, and in spite of the large credits in the United States foreign balances are accumulating here, and gold continues to be exported.

The market is, of course, aware of the steps which the Government is now taking to curtail the expenditure and consumption of the nation by inducing it to become more thrifty, and by requesting the wage-earning classes to seek for no further increases in wages. But these measures, whatever may be their ultimate value, have so far had no effect upon consumption, upon imports, or upon the foreign trade balance. The only really effective measure so far taken has been to provide for the American trade balance by the loan in the United States, by the creation of banking credits, to which we referred last week, and by the sale of moderate amounts of our American investments in New York. The measures will provide for the bulk of our payments to the United States for some time to come. As long as our imports are maintained at their present great total whilst our exports remain relatively small, and we have to provide such great sums for our Allies, it is evident that the market will continue in its present condition.

Early in the New Year, however, a great change may be effected if the Government succeeds in inducing the country to become much more thrifty and so provide a larger part of the War expenses out of income. Furthermore, there is the possibility that the Government will recognise the need to provide securities suitable for sale in other countries than the United States, more especially in Canada and South America, and the adverse balance which is now causing gold to go out in such substantial sums from week to week may be settled largely in securities of one kind or another, as well as by a reduction in the amount of foreign goods purchased. As matters now stand, however, the situation is that the supply of bills is extraordinarily small; in fact, the great joint stock banks have practically no international bills in their portfolios; that the Indian and similar banks are full of money and able to carry their own bills; that the money of the joint stock banks thus set free is going into Treasury bills at 5%; that the amount of foreign money in the market is substantial; that the supply of floating money available is large, although the rate for short money is maintained at somewhat over 4%; and that, notwithstanding the paucity of bills, open market rates of discount are as high as 5¼% for three, four, and six months' bills.

It is evident that rates of discount are likely to be firmly maintained at this level owing to the need of the Government to sell a large amount of Treasury Bills each week at 5% in order to finance the War expenses until the new loan is raised, and the desirability of retaining here as much foreign money as possible.

DEPOSIT RATES.

THE discount houses this week have raised the rates allowed by them on deposits at call and at short notice from 3½% and 3¾% to 4% and 4¼% respectively.

FINANCING THE GOVERNMENT.

LAST week the Governmental expenditures amounted to just over £34,000,000, almost the whole of which was needed for supply. To provide for this great sum the revenue received was only £3,364,000, and the balance of £30,000,000 was provided as to over £16,000,000 by the issue of new Treasury bills and by the receipt of £12,748,000 on account of the American loan. The Bank of England return this week shows that the Bank has increased its holding of Government securities by nearly £11,000,000, and further the Currency statement shows that an additional £10,000,000 of the balances to the credit of this account have been placed in Government securities, so that the Bank and the Currency Department between them have this week provided the Government with about £20,000,000 of new money. The cash balance of the Treasury last week was £23,965,000, or not quite £2,000,000 lower than in the previous week. The amount of Treasury bills outstanding on Saturday last was £293,812,000, and apparently the total will reach something like £400,000,000 by the beginning of January.

BANK OF ENGLAND.

GOLD continues to go abroad with persistent regularity, and in the aggregate the withdrawal of the metal from the Bank of England in the week ended Wednesday was £2,504,000. Rather less than £1,000,000 of this went to the United States, while substantial sums went to Spain, Egypt, South America, and some to Canada. Since Wednesday the movement has continued, although against the gold lost sovereigns have been received. On balance for the week ended Wednesday the net loss of gold on foreign account was £1,815,000. Against this loss £597,000 in gold was received from the country, and the final loss was £1,218,000, reducing the sum held to £51,239,000. The note circulation increased £973,000, and the reserve declined £2,192,000 to £35,413,000. There was an addition of £10,945,000 to the Government securities owned by the Bank, and by means of this money the Government was able to meet its disbursements, the reduction in the public deposits being no more than £1,789,000. The "other" deposits increased £8,876,000, while the "other" securities were reduced £1,635,000. The amount of the "other" securities is now £96,481,000, and the total of the "other" deposits is £93,525,000. The proportion of reserve to liabilities has fallen from 27.48% to 24.61%.

MONEY IN NEW YORK.

LAST week the reserves of the Associated Banks showed a reduction of £3,000,000 notwithstanding the continued import of gold. Presumably the money was transferred to the Treasury and to the interior. On the other hand the loans increased £4,000,000, and the gain in deposits was £900,000. The surplus reserve was consequently down £3,000,000 to just under £36,000,000. A statement issued by the Federal Reserve Board says that gold imports between January 1 and November 19 amounted to no less than $377,348,000, equal to about £78,000,000. With the sight exchange at 4.70⅞, and with our enormous purchases from the United States to pay for as well as a large part of the purchases of our Allies, it is evident that substantial amounts of gold will continue to be withdrawn from London for New York notwithstanding the credit facilities that have been created. Of course, we shall be able to provide this gold in large part at any rate from the productions of South Africa and of Australia as well as by the import of gold from India. Unless the United States is willing to lend money much more freely, or unless our investors sell their securities on a much bigger scale than hitherto, it is obvious that the stock of gold in the United States will continue to expand. A large part of the gold that has come in has gone into

the Federal Reserve banks and into the banks of the interior, but the reserves of the New York banks since the beginning of the year have increased £55,000,000.

The Irving National Bank of New York notify us by cable that the following rates of exchange are current in New York:—

POSITION IN INDIA.

Exchange has recovered this week to 1*s.* 4 3/32*d.*, and beyond selling the 50 lacs of drafts offered the Council has disposed of a substantial amount of "specials." The demand for money in India all the time is increasing, and the cash balances of the banks are falling steadily.

The following are the minimum Rates of Discount current in India:—

Bombay ... 6 per cent. (Nov. 4, '15) | Bengal ... 6 per cent. (Sept. 24, '15)

Particulars of the Tenders received and the Allotments made by the India Council on Wednesday last, December 1, are:—

Bills.				Telegraphic Transfers

* Deferred.

The following Special Sales have since been made:—

	Rs.	At
Bills on Madras	2,76,374	1/4 1/32
Transfers on Madras (Deferred)	2,00,000	1/4 3/32
Transfers on Bombay (Immediate)	2,50,000	1/4 1/8
Transfers on Bombay (Deferred)	5,00,000	1/4 5/32

From April 1 to **November 30** inclusive the Council granted remittance for **Rs. 9,40,86,061**, realising **£6,274,684.** Up to **December 1** of last financial year the total Bills and Transfers sold was **Rs.6,34.26.861, realising £4,230,816.** The total sales for the week ended **November 30** amounted to **Rs. 50,00,000,** realising **£333,560.** The amount to be offered for tender next Wednesday will again be **50** lacs.

SILVER.

After advancing to 27¼*d.* the price of silver has fallen to 26 7/16*d.* in consequence of re-sales of the metal by India and China, and also owing to a diminution in the demand for the Continent. Doubtless the reports that have been current as to peace negotiations have not been without effect, but it is evident that these reports should be accepted with great reserve. When they prove to be without foundation a sharp recovery in the price of the metal will probably be experienced.

	Nov. 26	27	29	30	Dec. 1	2	3

Stock Exchange.

Settlement of pre-War open position deferred to a year after peace declaration.—*Vide* Emergency Rules as to conditions.

	Ticket Day.	Pay Day.	Consols.
Settlement Days	Tues., Dec. 14 / Wed., Dec. 29	Wed., Dec. 15 / Thurs., Dec. 30	Wed., Jan. 5 / —

Some sharp fluctuations in general Stock Exchange securities have occurred since modification of minimum prices procedure. The competition, too, of the new French War Loan has been noticeable. The rush up in price of our own 4½% War Loan was followed by a sharp set-back from the best price of nearly 100 *cum* dividend for "scrip" to about 97¼xd, the present price for inscribed stock.

There has been a noticeable activity, especially during the last day or two, in American railway bonds, which has been shown by the numerous markings in descriptions that in normal times are scarcely mentioned.

In the industrial department there has been activity, accompanied by rises in the prices of shipping shares. Amongst the munition group a feature of the week has been the Thornycroft profit announcement, which has taken everybody by surprise. The features of the report are elsewhere dealt with.

Business has been quieter in the rubber section. The price of rubber receded early in the week, Standard crêpe being down to very near 3*s.* per lb., but during the last few days the quotation has again risen to 3*s.* 6*d.* These fluctuations must be regarded with reserve. In case there be any idea of operating for the rise or of accumulating supplies in view of future eventualities it would not be politic on the part of those who may have such action in view to pursue an unvarying course of buying. They would like to shake off any following which sought to tack itself on to their skirts. Having already bought to a considerable extent at low prices, when a rise is being pushed by outsiders, the originators of the move would effect some sales, and then a reaction would frighten the small plungers who had followed the lead. Down would go the price and the initial operators would again come into the market and buy. Hence a see-saw might go on for some time. Should, however, there be any serious endeavour to bring about a "rig" the position in these days is very different from what it used to be five or six years ago, when the quantity that had to be financed was comparatively small. The main output was then wild grown rubber, now it is plantation grown, and plantation rubber producers are altogether a different body of men to deal with than were those who had control of the supplies of Brazilian, &c., rubber. In these days any combination would be met with resolute action on the part of the big producers, and withal it is to be recollected that the proper aim of plantation producers is to keep a stable market and not one where the price alternately rockets and falls back in spasms. We call attention to the editorial remarks and schedule of companies that appear in subsequent pages.

"The New Empire Partnership. Defence—Commerce—Policy." By Messrs. Percy and Archibald Hurd. (London: John Murray. Price 6*s.*) The Messrs. Hurd show how, under pressure of war, the Empire is being welded into a virile working partnership which must profoundly affect the future of the race, and greatly modify its relations with the outside world.

CUBAN CENTRAL RAILWAYS.

THE Cuban Central Railways Company has raised its dividend from 2% to 4% in respect of the past year and at the same time has added largely to its reserves. The amount available for distribution, apart from the balance brought forward, is £97,484, a sum equal to nearly 10% on the shares. The dividend of 4% requires only £36,000, and out of the balance of £61,484 the directors have transferred £25,000 to reserve account, £25,000 to general renewals reserve, £5,000 to insurance account, and £5,000 to pension account, leaving £1,484 to be added to the balance carried forward, which is thereby raised from £13,054 to £14,538. Twelve months ago, in addition to paying the dividend of 2%, the sum of £15,000 only was placed to reserve. In other words, the gain in profit for the year has been nearly £65,000, which, having regard to the fact that traffic receipts were up only £55,000 and that interest charges were heavier, is a very satisfactory achievement. The actual increase in gross receipts was £61,000, and as this was accompanied by a reduction of £25,000 in working expenses the net earnings have gained no less than £86,000, or nearly 40%. The year is, indeed, the most profitable experienced by the Company. A comparison of the net results of the last five years is given below:—

Cuban Central Railways.

	1914–15	1913–14	1912–13	1911–12	1910–11
	£	£	£	£	£
Net profit	164,584	99,588	142,875	109,545	97,976
5½% Preference dividend ...	67,100	66,917	66,000	66,000	66,000
Profit for Ordinary	97,484	32,671	76,875	43,545	31,976
Ordinary dividend	36,000	18,000	27,000	18,000	18,000
Rate per cent.	(4%)	(2%)	(3%)	(2%)	(2%)
Surplus	61,484	14,671	49,875	25,545	13,976
Special renewals, &c.	35,000	—	37,000	21,000	9,000
Reserve	25,000	15,000	10,000	5,000	5,000
Total funds	60,000	15,000	47,000	26,000	14,000
Balance	Cr.1,484	Dr.329	Cr.2,875	Dr.455	Dr.24
Brought forward	13,054	13,383	10,508	10,963	10,987
Carried forward	14,538	13,054	13,383	10,508	10,963

Since the beginning of July the traffic receipts of the line have risen by about £25,914, and inasmuch as comparison will continue to be made for several months with poor takings a year ago, whilst business in Cuba is on the up grade the position of the Company twelve months hence should be still more satisfactory. Referring to the future the General Manager in his report states that "the prospects for the coming year are good. So far weather conditions have been ideal, and the cane throughout our district is in excellent condition. The area under cultivation has been extended, and some of the mills have increased their capacity. Others have made improvements with a view to obtaining a better extraction from the cane, so that altogether I think we may look forward to a substantial increase in our earnings from this source. At a very conservative estimate I think this increase will be 12%." The tobacco crop is expected to be less than in the previous year, but all other classes of traffic promise to keep pace with the sugar business, and an all-round increase in traffic may be anticipated. The price of the £10 shares is 5⅛xd., and on a 4% dividend basis the yield afforded is as much as £7¾ per cent.

Mining Topics.

MORE public interest has been given to the mining department during the past week than for some while, and a feature of the week has been the receipt of considerable buying orders from the Cape, being chiefly in connection with the shares of Eastern Rand undertakings. Special inquiries have been for Springs, Daggafonteins, City Deep, Modder B., and Modder Deeps, and in each case the inquiries have been contributed to from the Cape. Springs shares and also the options have shown a very considerable advance in price; there have been dealings in Modder B's at over 6, Modder Deeps at slightly above 5¾, and City Deeps have advanced to 3½. So far indifference has been displayed toward New Modderfontein shares in their present form. It is considered certain that the meeting to be held in January next will agree to the splitting of the shares from their present denomination of £4 into four shares of £1 each. The demand for Daggafontein shares has been on well-grounded rumours of a pending scheme for the financing of this company, and in subsequent columns will be found an article upon the subejct. Prices for both Mining and Finance Companies ceased at the best points.

A little while back there was what is termed a

"chicken boom" in Mexican shares, but the speculative interest has not continued.

Some attention has been given to the shares of mining companies whose affairs are dominated by the state of the market for silver, which continues to rise in price. Broken Hill descriptions have been especially strong. The further dividend announced by North Broken Hills has led to an appreciation in the price to about 43*s.* 6*d.* Sulphide Corporation shares have been in request, though the Ordinary shares have reacted somewhat, due to the fact that final dividends of 10% on the Preference and 15% on the Ordinary have been announced, making 20% in each case for the year to June 30 last. For the year 1914 10% only was paid on both classes of shares.

As a result of the upward movement in the silver market, and also indirectly as a result of the excitement in Canada over the prospects for gold mining, a few English operators have sought to have a finger in the Canadian pie. This has chiefly expressed itself in the demand during the past week for the shares of the Canadian Mining Corporation, upon whose position and prospects some remarks will subsequently be found. As we mentioned last week, Associated Gold Mines of West Australia shares have been in request, and this week shares of the kindred company, the Associated Northern Blocks, have been inquired for, in both cases consequent on their Canadian interests.

The disposition evinced a few weeks ago to take an interest in diamond shares has simmered down. It is not believed that there will be any resumption of the industry on a large scale, but only partial recommencement.

The copper department has been erratic, and uncertain at that. Fresh statements have been put forward as to long-rumoured American combines. On this occasion the Guggenheim group of companies is mentioned, including the Kennecott, a concern little known on this side, the Braden, a Chilian undertaking, and the Guggenheim Exploration itself. The Kennecott Company, though a fresh name to this side, was formed as long ago as 1906 to deal with an Alaskan high-grade copper mine. Apparently the Braden Copper Company, whose property is in Chile, is to be amalgamated with the Kennecott, which also is to take in the Guggenheim Exploration. The Utah Copper Company is also mentioned as in some way figuring in this scheme, while there have also been indirect references to the inclusion of the Inspiration Consolidated. Statements have appeared in the American Press which seem to indicate that as regards the Kennecott combine arrangements have been largely made, though it is interesting to recall that the rumours regarding American combinations but a little while ago were quite different. It is all very vague at present, but it is to be hoped that something really definite will be made known at an early date.

Tin shares have been somewhat weak in tendency in sympathy with the lower price of the metal.

The Champion Reef has declared a final dividend of 8*d.* per share for the year ending September 30 last, making a total of 1*s.* 5*d.* per 2*s.* 6*d.* share, or 56⅔%, compared with 1*s.* 4*d.*, or 53⅓%, for the previous year.

The Oroville Dredging Company announces its usual quarterly dividend of 2½%, though this time, for purposes of adjustment, income tax has to be deducted at the rate of 4*s.* in the £. The Plymouth Consolidated has declared another dividend of 1*s.* per share, making 15% for the current financial year.

The recent rise in the price of silver to over 29¼*d.* per fine ounce will, if maintained, considerably benefit a number of mining undertakings. The average price for the first 10 months of 1915 has been only 25¾*d.* per fine ounce. The Broken Hill Companies, and particularly the Proprietary and Sulphide Corporation, the Santa Gertrudis of Mexico, and the Canadian Mining Corporation, are among the large producers of the metal.

MASHONALAND AGENCY.

At the end of August, 1914, a reconstruction project was mooted, but was dropped. Last month a new scheme was put forward to be considered at a meeting held on Friday this week. The new project was a scaling down of the capital from £400,000 to £150,000, by reducing the par value of the Ordinary shares from £1 to 7*s.* 6*d.* per share. The holding of the Company in Wankie Colliery shares was to be distributed among shareholders, and the proposal was that 6*d.* cash per Agency share should also be distributed. There has been a contention that the cash distribution should be larger. At the time of writing we have no knowledge of how the meeting went, but whether it was decided that sixpence or a shilling per share be distributed, the principle seems to us utterly adverse to the interests of the Company, and shareholders who voted for any cash distribution whatever voted against their own interests. It is not a case of a bird in the hand being worth two in the bush, but the necessity of having resources in hand for carrying out the policy of conserving and developing the remaining assets of the Company. The bulk of the income of the Company has been derived from its holding of Wankie shares which it now distributes. Almost the whole of the Company's income-bearing assets will be gone, and yet denudation of cash resources is proposed.

SHEBA.

For the year to June 30, 1915, this Company did poorly in contrast with the previous year; with an augmentation of some 10,000 tons it secured a profit of approximately £11,000 less than in 1913-14. Three dividends of 5% were distributed for 1913-14, while for 1914-15 only two similar distributions were made. A comparison of results is set out below:—

Year to June 30	—1915—	—1914—
	£	£
Gross revenue	[illegible]	[illegible]
Expenses	104,686	11[illegible]
Gross profit	[illegible]	[illegible]
Writings off	£5,148	£5,104
Taxes	5,374	6,110
Dividends	(10%) 26,974	(15%) 40,461
	[illegible]	[illegible]
Surplus or Deficit	Surp. 665	[illegible]
Balance brought forward	[illegible]	11,490
Balance carried forward	[illegible]	[illegible]

The tone of the report is not a hopeful one as to the immediate future. The ore reserves are almost identical as to quantity at June 30 each year, but the assay value of 1915 was appreciably under what it was in 1914, being an average of slightly under 9 dwt., against approximately 11 dwt.

Burma Corporation.—Cable advice reports the lead bullion production for November as 896 tons, of which 858 tons were refined, indicating that the refinery capacity is catching up the lead bullion output. This is important as bearing on the official hope that next year a lead bullion output of about 1,500 tons per month will be reached, and all refined, for the production of 1,500 tons of soft lead and 140,000 ounces of silver per month.

Development indications continue very satisfactory at the 300-foot and 430-foot levels, and this week it is advised that the internal shaft, now very close to the horizon of the Tiger tunnel (670 feet from surface), for 10 feet of sinking showed values averaging 14 ounces silver, 16% lead, and 19% zinc. If this is in the footwall of the lode the values are highly encouraging.

Sub-Nigel.—Recent development returns have shown as under:—

Period 1914.	Distance Exposed Feet	Sampled Feet	Width Inches	Assay oz.	dwt.

DAGGAFONTEIN.

PROJECTED RECONSTRUCTION.

INITIALLY the freehold of farm Daggafontein in the Eastern Rand was owned by what now is the Henderson's Transvaal Estates, Limited. The farm comprises 4,363 morgen, which is equal to 9,238 acres, and again equivalent to 6,285 mining claims.

In June 1899 the Daggafontein Prospecting Syndicate, Limited, was formed with an authorised capital of £60,000 to prospect by bores the potentialities of the property, and the right was given the Syndicate to form a mining proposition with a capital of £600,000. A commencement of boring by the Syndicate was made, but, owing to the Boer War, for a long period nothing could be effected. After that war boring was recommenced and conducted by the Syndicate up to the time of the formation of the Daggafontein Gold Mining Company, Limited, in October 1902, and from September 1903 the Mining Company conducted its own operations.

Having given this brief retrospect, we revert to a description of the area. The farm, of approximately four miles east to west, and averaging a little over two and a half miles from north to south, all reef-bearing, is situated to the south-east of Geduld, to the east of Springs Mines, and to the south of Grootvlei. Ground immediately south of the farm has been recently taken up by the Consolidated Gold Fields Company and the Central Mining and Investment Company, such area being on the dip of the Nigel field, and there the dip is towards the north-west.

The experience derived from boring at various points in Daggafontein proved the existence not only of the Main Reef (Van Ryn) series, common to the whole of this region, but also, about 1,300 feet nearer to surface, parallel reef formation, termed the Kimberley Reef, and in two of the bores that were sunk in farm Daggafontein assays of Kimberley Reef were found of payable character. Though accompanying these remarks we give a general plan to show the location of the property and the relative position of neighbouring properties, it is desirable here to give another small plan showing the location of the various bores that were sunk, either by the Syndicate or the Daggafontein Gold Mining Company, prior to the initiation of the sinking of the No. 1 shaft, which was really commenced in earnest in November 1910. The plan below gives the location of the shaft and of the different bores referred to in the table given after the small plan.

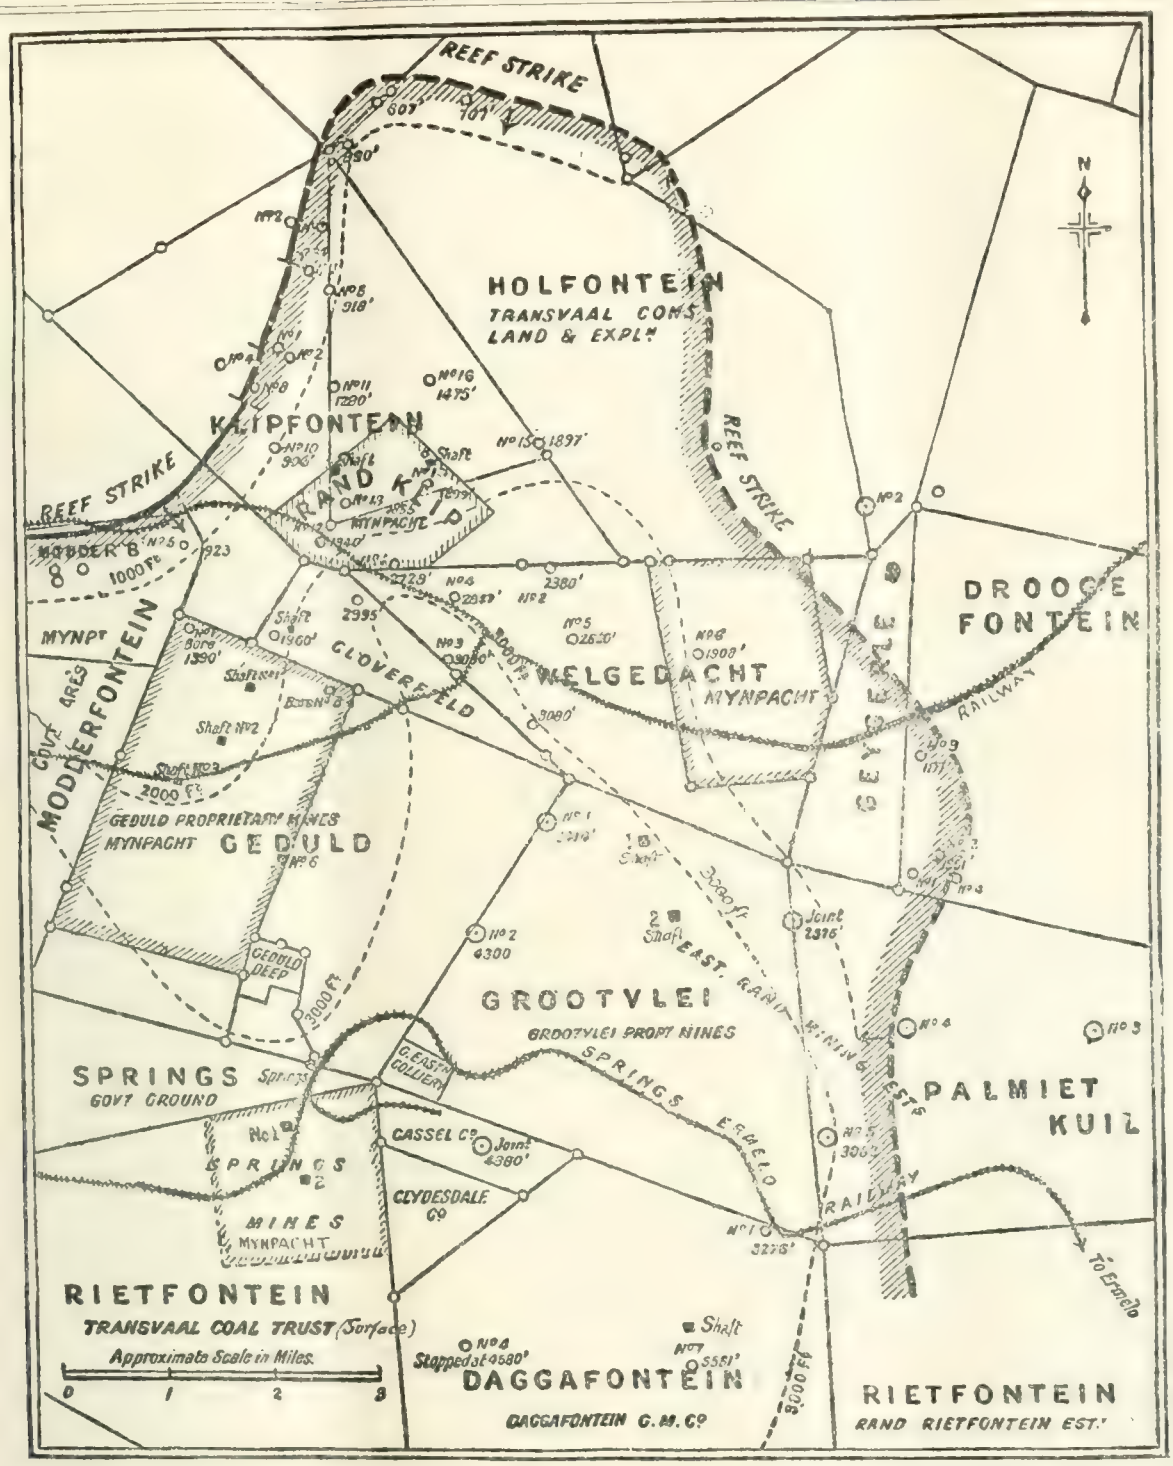
Borehole	Ft.	Main Reef — Assay Value and Width	Ft.	Kimberley Reef — Assay Value and Width
No. 1	3,276	1oz. over 5·5in.		
1905.—No. 2 (joint with Grootvlei, &c.)	4,880	11·5dwt. over 7·8in.		
No. 3. S.E. (stopped at 2,627ft.) ...	—	—	2,118	19dwt. over 8.5in.
No. 4. W. not proceeded with deeper than about 1,500ft.				
No. 5. S.E. (stopped at 3,887ft., and No. 7 bore started to locate Van Ryn reef position)	—	—	1,946	31·2dwt. over 2·5in.
Nov. 1905. S.E. No. 6 ...	3,125	Av. 11·36dwt. over 23½in.		
Feb. 1908. Central, No. 7	3,561	24·58dwt. over 6in.	2,102	18dwt. over 7in.

Bore 6 is just to the north of bore 3, at south-east corner of the farm.

Bore 7 is midway between bores 1 and 6. The No. 1 shaft is near this bore.

In the middle of September 1914 the shaft met reef at about 3,580 feet depth, reported to show an assay value of 7.85 dwt., say 33*s.* 4*d.*, over a width of 40.36 inches.

If reference is made to the larger plan accompanying these remarks it will be noted that a contour line shows where reef exists at a depth of 3,000 feet. Such has been ascertained through the many boreholes sunk in the district. Then it will be noted that the shafts of the Springs Mines penetrated the reef where it dips *from* the north, while the shaft of the Daggafontein encountered the reef on the dip *from* the east. The matter is a technical one and might escape notice unless attention were called to it. It may be asked: What does it matter which way the dip goes? The answer to this is, that consequent on the curving of the reef outcrop, the shaft of the Daggafontein penetrated reef at a slightly less depth than either of the Springs shafts, although the Springs Mines shafts are distant approximately four miles west of the Daggafontein shaft.



The Henderson's Transvaal Estates, Limited, as vendor, on the formation of the Daggafontein Gold Mining Company with £600,000 capital, received as its consideration 300,000 £1 shares, and the Daggafontein Prospecting Syndicate had the right to take at par the balance of the £600,000 capital. On the formation of the Daggafontein Gold Mining Company in October 1902, the Syndicate subscribed at par for 100,000 shares, and, under option rights which it is unnecessary to detail here, in 1904 it took up a further 10,000 shares at par. The detail of issues of capital by the Daggafontein Gold Mining Company are given below:—

October 1902. Capital £600,000 in £1 shares.

	Shares
To vendors (Henderson's Transvaal Estates, Ltd.)...	300,000
Oct. 1902: Purchased by Daggafontein Prospecting Syndicate	100,000
Further issue to directors, &c....	1,507
April 1904: Taken under option by the Daggafontein Prospecting Syndicate at par ...	10,000
April 1909: Purchased by Henderson's Transvaal Estates at par	125,000
Total issue to present date	536,507

The majority of the Prospecting Syndicate's £60,000 capital, we believe, is held by Henderson's.

The reimbursement of the Syndicate of the costs of sinking bores, and the cost of the Company's own boring operations, later loss on investments, the Company having temporarily invested working-capital resources in Consols and lost money thereby, and finally the expenditure of about £250,000 for cost of shaft-sinking and its equipment left the Company in the position at June 30, 1914, of having expended all its working capital resources, and incurred a floating debt of some £107,000. At the present time, we understand, the floating debt is approximately £130,000. Throughout its recent history the Company has been financed by the Henderson's Transvaal Estates, Limited. When the War broke out in

August 1914, all operations were suspended and the mine put in charge of a caretaker.

Any idea of raising further capital during the War period has been hitherto deferred, but for some months past there have been rumours of negotiations with design to lift the Daggafontein out of its present impecunious and uncomfortable position. These rumours have taken a more definite shape during the last few days; and, indeed, it is now no secret that arrangements have been made between the Consolidated Mines Selection, the Central Mining and Investment, and the Henderson's Transvaal Estates, Limited. Heretofore the last-named Company alone has provided the financial resources required, The Daggafontein mine has been somewhat of the nature of a millstone about the neck of the Henderson's, and it may be fairly said the proposition is too big a one for it to undertake single-handed. But it is quite a different matter when the co-operation is secured of the Consolidated Mines Selection and the Central Mining, two strong companies. A reconstruction and putting up of additional capital does not mean the Daggafontein will then and there enter a state of prosperity. There will have to be a long period of waiting—to effect developments, the sinking of a second shaft, and later, if the nature of developments permit, the erection of a reduction plant. This will take two or three years. The conclusion of the arrangements being entered into, however, appears near at hand.

Although the main details of the contemplated Daggafontein reconstruction have been agreed upon by the Henderson's Transvaal Estates, Limited, who are by far the largest shareholders and practically control the concern, the matter has yet to be placed before the directors of the Daggafontein Company itself.

Meanwhile the idea entertained is to form a *new* Daggafontein Company to take over the property against the issue of approximately 308,000 £1 shares,

To the PANAMA PACIFIC EXPOSITION, Feb.-Dec., 1915.

GRAND TRUNK
The Business Man's Route through Industrial and Commercial centres
CANADA'S GRAND TRUNK RAILWAY
Phone Gerrard 6762

130,000 of which will be issued to Henderson's Transvaal Estates, Limited, in discharge of the Daggafontein Company's debt to that Corporation, being at the rate of one share for every £1 owing. The balance will allow of a distribution of one new share for every three of the 536,507 existing old £1 shares. Then, beyond, 100,000 shares will be subscribed at par by the Consolidated Mines Selection Company, Limited, the Central Mining and Investment Corporation, Limited, and Henderson's Transvaal Estates, Limited. This money to be employed in the immediate prosecution of development operations. The position would then be:—

	New £1 Shares
To old shareholders, say	178,000
To retire floating debt	130 000
Subscribed at par	100,000
Total	408,000

It is contemplated that at a later date convertible Debentures to the tune of £400,000 will be created, and will be offered to the shareholders of the Daggafontein Company under a guarantee of the above Corporations, who, as a consideration for such guarantee, will receive further options and a cash commission.

It is understood that the management and engineering control of the reconstructed concern will be vested in the Consolidated Mines Selection Company, Limited.

It may be advanced that to attempt to estimate what the ore contents of the Daggafontein mynpacht, wherever it is situated, is impossible. Although there is not on the Daggafontein, as with the Springs, development done so as to bring ore into sight, ascertainment has been made of the existence of reef by boring, and the reef has been come upon in the shaft. It is true it is not practicable to form any opinion as to the grade that will be disclosed by de velopments, but it seems to us it will not be unreasonable to sum up the position as to pay ore contents in the same way as has been done by us in the case of Brakpan and Springs. With both these properties we conjectured it would be wise not to estimate more than half the area as containing payable grade, and if we apply this moiety principle to the total 1,436 mynpacht, &c., claims of the Daggafontein, assuming a 6 degrees dip and 4½ feet of stoping, this would mean an aggregate of 24,165 mine tons per claim. From the mine tons we will deduct 15% for underground and overhead sorting, and after allowance of this we will assume a quantity of 20,000 mill tons per claim. The total mynpacht, when it is marked out, will contain 1,436 claims, and if we allow only half these claims as being payable, the result may be expressed as under: —

	Mill Tons
718 net claims × 20,000 mill tons per claim ...	14,360,000

The Springs Mines is being equipped with a plant to deal with 360,000 tons per annum, and the application of a plant of similar capacity for the Daggafontein would mean a life for that property of almost exactly 40 years.

As the Company's own mynpacht, &c. mining area will aggregate an area of 1,436 claims, the remaining portion—equal to 4,847 claims—of the farm, on proclamation, will be opened to prospectors, and the mining Company will be entitled to receive half the licence fees, the other half going to the Government; or some other arrangement may be come to in case, as is probable, a Government lease like that of the Government Areas (Modderfontein) is fixed up.

Arizona Copper Company.—The directors announce that owing to the continuance of the strike no copper was produced during November. On November 5 a fire occurred at No. 3 mill at Clifton. The exact amount of damage has not yet been ascertains, but it may be stated that the figures which have been put into circulation are greatly exaggerated.

CANADIAN MINING CORPORATION.

THE recent rise in the price of silver to about 29*d.* per fine ounce, which compares with an average price of only about 25⅜*d.* for the first 10 months of the year, has caused attention to be given to the shares of silver-producing companies, and particularly to the Canadian Mining Corporation—a 1914 amalgamation of four separate Cobalt silver mines—the £1 shares of which have risen during the past week to 11*s.*, in comparison with 7*s.* 6*d.* a few months ago. In the circumstances information as to the progress of the undertaking will be timely. Unfortunately, it is impossible to give the full amount of information necessary to the proper appreciation of the Company's position, because of the slackness of the administration in the matter of issuing reports. Four-weekly statements of earnings are supposed to be published, but they appear spasmodically, and even then are always belated. Official information in regard to current development results is altogether lacking; and this is a serious matter for individual shareholders and the Stock Exchange, having regard to the fact that the holders of large numbers of shares have the controlling of the undertaking, and, therefore, know the development disclosures not officially published. In making these remarks we have in mind the fact that in recent months rumours in Canada and newspaper paragraphs have appeared stating that rich development disclosures have been made, especially in the City section of the properties, and also beneath the Cobalt Lake, now drained of its water. But we have seen no official confirmation or denial, and we are informed by the London office that current development results are not published. However, with such information as is available in regard to the progress of the undertaking we deal below.

The five properties now belonging to the Company are the Cobalt Townsite, City of Cobalt, Cobalt Lake, Townsite Extension, and Little Nipissing, together covering 183½ acres in the centre of the Cobalt Camp. These properties are vested in a Canadian-registered undertaking, the Mining Corporation of Canada, which at December 31, 1914, had an issued capital of 2,075,000 $1 shares. The English-registered Company, the Canadian Mining Corporation, Limited, holds 1,911,319 of these shares. The Canadian Company's financial year ends December 31 and the English Company's on March 31. Why this should be, having regard to the fact that the amalgamation dated from April 1, 1914, it is difficult to see; but one thing is certain—the practice of having one financial year for the subsidiary and another for the parent adds obscurity to a position already fogged by lack of interim information. The first reports of the amalgamated concern were made up for the nine months to December 31, 1914, in the case of the Canadian Company, and for the twelve months to December 31, 1915, in the case of the English Company. For the nine months covered by the Canadian Company's report 664½ tons of high-grade ore, containing 1,267,547 oz. of silver, equal to 1,907 oz. per ton, were shipped. The mill of the Cobalt Reduction Company, in which the Corporation holds a large share interest, treated 106,719½ tons of low-grade ore for the Corporation for a yield of 1,917,577 oz. of silver, equal to 18 oz. silver per ton. The total silver produced was thus 3,185,124 oz., of which about 40% was obtained from a very small quantity of extremely high-grade ore, as follows:—

Canadian Company's Results.

[9 Months to December 31, 1915]

High Grade Ore Output	High Grade Silver Produced Output	High Grade Yield Per Ton	Low Grade Ore Output	Low Grade Silver Produced Output	Low Grade Yield Per Ton	Total Ore Output	Silver Produced Output	Yield Per Ton
Tons	Oz.		Tons	Oz.		Tons	Oz.	
664½	1,267,547	1,907	106,719½	1,917,577	18·0	107,384	3,185,124	29·6

The gross price realised for the silver produced in the nine months to December 31, 1914, was 51.2 cents per ounce, equal to, say, 2*s*. 1½*d*. in sterling. The gross value of the silver output per ton of total ore shipped and treated amounted to about 60*s*. 9*d*. Working costs totalled about 36*s*. 6*d*. per ton, but, deducting the revenue received from dividends paid by the Reduction Company, the actual working expenditure amounted to about 31*s*. 6*d*. per ton, equivalent to 15 oz. of silver per ton on the basis of the average price realised for the period. Including dividend receipts from the Reduction Company and sundry revenue, the profit at the mines for the nine months to December 31, 1914, amounted to £181,400, of which head office expenses, royalties, taxes, and Manager's commission absorbed £30,979, leaving a net profit of £150,421. Of this only £51,875 was paid in dividends during the period, the balance of £98,546 being carried forward, and resulting in the balance sheet of the Canadian Company at December 31, 1914, showing the very strong position of £112,760 surplus liquid assets.

As regards the operations of the current year, we can only judge the progress of the undertaking from the monthly advices, and the information given in these is, as we have said, very deficient. The quantity of ore milled is given, but not the tonnage of the high-grade ore shipped, a very vital factor having regard to the fact that this class of ore in 1914 supplied 40% of the total silver output. Moreover, the monthly advices do not state the silver output, but merely give the value of production *plus* dividend receipts from the Reduction Company. The price obtained for silver is not mentioned, and it is also impossible to tell how much of the revenue is derived from silver production and how much from dividends on Reduction Company's shares. However, in contrast with the financial period of nine months to December 31, 1914, covered by the last annual report, we are able to give in the following table the gross income, the expenditure at the mines, and the profit at the mines for the 40 weeks—nine months and one week—of the current year. The table also shows the English Company's receipts from dividends on its shareholding in the Canadian Corporation for the year to March 31, 1915, and the dividends paid out. The English Company's issued capital at March 31, 1915, was £1,529,130. Its net income for the last financial year was £90,323, equal to not quite 6% on the capital, and the distribution actually paid was 5%. It is to be noted, however, that the English Company's revenue would have been much larger but for the conservative distribution of the Canadian Company's profits.

It will be seen from the above that the quantity of ore milled shows some reduction, and also that, whereas the profit at mines for the nine months to December 31, 1914, was £181,400, the figure for the first 9¼ months of the current year, according to the monthly advices, is £179,763. It is impossible, in view of the lack of information, to say for certain whether the reduction of profit is due to the smaller quantity of ore milled, but it looks as if this is the proper explanation. The rise in the price of silver has been too recent to favourably affect the earnings shown in the table, but if the enhanced value of the metal is maintained the profits of the Corporation should show considerable increase, provided, of course, there is no material reduction in the silver values of the ore produced by the mines. In this connection it is particularly important that high-grade ore should continue to be found, and consequently, if very rich discoveries have been effected since the last annual reports, official silence in the matter is inexcusable. With 40% of the silver production coming from a few tons of high-grade ore, it is manifest that lack of high-grade ore and ability to produce silver from low-grade ore alone would result in the present comparatively large profits being cut down to very small dimensions. The ore reserves at December 31, 1914, were estimated to be as follows:—

Ore Reserves.

	High-Grade Ore		Low-Grade Ore		Total Ore	
	Tons	Silver Contents Oz.	Tons	Silver Contents Oz.	Tons	Silver Contents Oz.
Town Re .	2[illegible]	473,000	76,113	1,522,260	76,322	1,995,260*
City ...	454[illegible]	869,200	17,249	344,980	17,7[illegible]	1,2[illegible],180†
Total ...	6[illegible]	1,342,200	[illegible]	1,867,240	[illegible]	[illegible],440

* Ounces, 26·1 per ton.
† Ounces, 2,500,000 on Dec. 31st, 1914.

It will be seen that the position at the end of last year was not a strong one, the silver contents of the high and low grade ore combined representing only about a year's production, which makes it all the more evident that development progress is the crucial factor in the Company's position. Provided development results are good—as they are rumoured to be—and if they continue to be so, the £1 shares of the English Company at their present price of 11*s*., in view of the recent upward movement in the price of silver, should yield larger dividends than recently paid; but it is to be borne in mind that the inherently speculative character of the shares is greatly increased by the lack of official information on which to base an opinion, and the future is especially dependent upon the capacity of the management, which, in regard to the mines, appears to be good.

LONDON, SATURDAY, DECEMBER 4, 1915.

MOBILISING OUR FINANCIAL RESOURCES.

This week the Government has made further progress with the task of financing the War. It is true that the step is of a negative rather than of a positive character, but it is none the less effective for the purpose in view—to keep the nation's total expenditures within the limits of safety and to provide the great funds needed to finance the War. To understand the importance of the step taken this week, one finds it desirable to review briefly the events that have governed expenditure, both national and Government, since the War started. The most important of these was the decision of the Government to create a great Army. This decision involved a heavy reduction in the supply of labour on the one hand, and a greatly increased demand for it for manufacturing and distributing purposes on the other. Next in importance was the haste with which the Army was assembled and the need to provide it, in the shortest space of time possible, with everything it required. This in turn compelled manufacturers, traders, and railway companies to offer special inducements to labour, both in the matter of wages and in overtime allowances, to put forth strenuous efforts to produce and to transport the goods. Moreover, this haste, and the greatness of the need, caused both the War Office and the Admiralty to pay abnormally high prices for the things they required, in order to induce manufacturers to meet their demands by extending their works and by giving special bonuses to their workmen. These two factors have brought about a great rise in the profits of manufacturers and traders, not only in the War trades, but in many other industries, a remarkable expansion in the average earnings of workmen, and have contributed to the rise of over 40% in prices. Moreover, the great war orders placed abroad, and the unprecedented consumption of the Allied nations, have caused world prices to show an appreciable advance, and have brought all the neutral and other nations out of the extreme depression into which they fell at the beginning of the War, into a relatively high state of prosperity, thereby causing their consumption also to show marked expansion.

With prices still advancing both at home and abroad, it is of the greatest moment that everything possible should be done to check any further rise in consumption in this country, as such rise will accentuate the advance in prices, and will make the task of paying for our great foreign purchases yet more burdensome. Indeed, to prevent a further rise in prices it is not only necessary to check the growth of consumption in this country, but to reduce the present level of consumption.

In considering this matter account should be had of the fact that the country is now buying abroad directly and indirectly nearly £1,000,000,000 worth of goods in the course of a year, and that it is selling goods abroad at the rate of less than £400,000,000 per annum. Hence, an all-round advance of 10 per cent. in prices means a loss of £60,000,000 a year to this country. The advance in prices according to our index number has been over 40 per cent. since the War began; and although the advance in the prices we have paid on the average for goods from abroad is less than this, it has still been very large. Unless consumption in this country is now checked, and substantial reduction effected in order to neutralise the expansion in consumption in the countries from which the Allies have bought so freely, a further great advance in prices will become inevitable. And such advance in world prices would not only increase our already serious problem of making payment for our imports, but would reduce the quantity of goods and produce which other nations would otherwise be able to supply to the Allied Powers.

And with this situation there were signs that fresh requests for higher pay were about to be made by the wage-earners of this country, and that these requests would be used by manufacturers to demand still higher prices from the British Government and from consumers.

It was this situation that called for the Joint Conference this week between the Prime Minister, the Chancellor of the Exchequer, the President of the Board of Trade, and a great body of Labour delegates and caused Ministers to make an eloquent appeal to the working classes in their own interests not to ask for further increases in wages, and not to squander the large incomes they are now receiving, but to lend to their country, to meet the war expenses, as large a portion of their earnings as possible.

The Labour delegates listened to these requests with very great attention and with much sympathy, and again displayed the patriotism which animates all classes in this country by passing the following resolution:—

"That, having heard the very important statements presented to the conference by the Prime Minister, the Chancellor of the Exchequer, and the President of the Board of Trade, we hereby resolve to arrange for an adequate number of copies of the official report of their speeches to be supplied to the members of all trade unions, and to commend to their

earnest and favourable consideration the appeals contained therein."

And, just as the men's delegates wished to do the right thing, we have no doubt that the men will be equally patriotic, and that one of the most important steps in the work of checking the rise in prices and adjusting our foreign exchange will be taken by the working classes of this country in refraining from demanding a fresh advance in wages, in voluntarily reducing their consumption of non-essentials, and in providing a substantial sum of money for the War.

If the working men of this country act in this patriotic manner, would it not be possible to induce manufacturers and others to examine into the profits they are making, and, if they find the prices they are charging for goods are exorbitant, to reduce them substantially? It is true that Parliament has imposed an income tax of 3*s*. 6*d*. in the pound, a super-tax on large incomes rising to 3*s*. 6*d*. in the pound, and a 50% profits tax; nevertheless, it is evident that in some cases—possibly a few cases—great profits are being made after the payment of these taxes. The workmen know the firms that are making these profits, and it will be difficult to induce them to refrain from demanding a still greater share of these profits. The difficulty would, however, be met if these few firms would voluntarily reduce their prices, and thus forgo any profit beyond an amount that gives liberal compensation both to capital and management. From the criticisms by the delegates of the speeches of both Mr. McKenna and Mr. Runciman it is evident that this matter was very much in their minds, and it is possible that the assent of the labour unions to the proposals of the Government will be made conditional upon the limitation of manufacturers' profits. In other words, they may demand that both capital and labour shall be required to consider not merely their own but the country's interest. In considering the profits accruing to capital, however, it will be essential to take into account the present heavy taxes—income, super and excess profits taxes—which in the vast majority of cases have already reduced the return to capital to very modest proportions.

But whatever stipulations the workmen may make to the proposals now before them, we regard the step taken by the Government this week as a highly important one, and as assisting not only to check the further rise in prices, but to bring to the Exchequer substantial contributions to the next War Loan.

THE FRENCH LOAN.

The prospectus of the National French Loan, which is published elsewhere, states quite clearly that both capital and interest will be exempt from all taxes, present and future, of the Government of the French Republic, and anyone subscribing for the loan in this country need have no fear that his income will ever be reduced by the imposition of any French tax upon the loan. The question of taxation as applied to a French citizen is, of course, an entirely different matter. The loan will be free of all taxation, but presumably a French citizen, in returning his income for taxation, would have to include the income derived from the Government loan, and he would be taxed on this income including interest received on Government debt. By making the loan free of taxation the French Government has made it readily saleable in all parts of the world. Securities bearing national taxes, whether owned by an investor at home or abroad, can usually be sold only in the home market, as foreigners have a rooted aversion to paying the taxes of other nations. Therefore, a British investor applying for the French loan now offered for subscription need have no fear of any French tax upon his investment. All he will have to pay is the British income tax to which he is liable according to his income.

The price of issue is £3 4*s*. per 100 francs nominal capital, being the equivalent, at the exchange of f.27.50, of 88 francs, the price at which the loan is being issued in Paris. When the exchange recovers to par, that is 25.22½, the price of issue of £3 4*s*. will be equal to a price in francs of only 80.72, and this is practically the price at which the investor is asked to buy.

On the basis of an exchange of 25.22½, the return at the present issue price is £6 3*s*. 10*d*., and on the basis of an exchange of 27.50 it is £5 13*s*. 8*d*. This yield is a very attractive one, and a buyer will not only get this high return, but will probably see the value of his security recover to well over par before many years are past. The bonds cannot be converted before 1931, so that he will enjoy his high return for at least 15 years, and if the loan is then converted he will get a premium upon his investment of nearly 20%.

THE STOCK EXCHANGE.

On a memorable Wednesday recently a meeting of informal character was held of Stock Exchange members. A resolution was carried at such meeting urging the Stock Exchange Committee to adopt a policy in respect of naturalised members of enemy origin. While we then expressed the view that consideration should be shown, we cannot agree with the procedure, *still existent*, of business on behalf of such naturalised members being conducted for them by English authorised clerks, who in some cases are themselves members of the Stock Exchange. Their principals, wisely in the circumstances, absent themselves, but their representatives of English birth act for them. About the time of the meeting we pointed out that as regards the legal standpoint matters were entirely in the hands of Stock Exchange members themselves, for even if members of alien origin were re-elected it would not be incumbent upon members of patriotic instincts to deal with either them or their authorised representatives. The continuance of English authorised clerks indiscriminately conducting business for naturalised members of enemy origin appears to us to be a matter for inquiry. But certainly it ought to be well weighed whether members who deal with the authorised representatives of naturalised aliens are in all cases behaving in a manner consonant with the patriotic traditions of the Stock Exchange.

Though certain alterations in the times of Stock Exchange procedure have become necessary in consequence of the banks closing an hour earlier than heretofore, the changes on the part of the Stock Exchange do not affect the public. Those clients who have to make transfers of stocks inscribed on the books of the Bank of England, &c., will be notified by their brokers that their attendance will be required at a certain hour, and this is only carrying out the old procedure with an alteration of hours. A client who has to deliver stock registered and transferable by usual transfer forms, if he does not post the executed transfer to his broker, but intends to deliver it personally at the broker's office, will be well-advised not to defer his visit till later than just before midday. In other respects the public is not affected by the internal arrangements.

This week both the War Loan "inscribed" stock and the War Loan "scrip" are quoted ex dividend, and the prices have automatically come together. In future there will be a distinction between inscribed stock and stock to bearer, in the same way as heretofore there has been a distinction between inscribed stock and scrip, but no separate quotation in the Official List is contemplated. With Consols, if a bearer security is to be traded in the purchaser, or seller, has to intimate his special desire, otherwise the bargain is in "inscribed" stock.

ITALY AND THE WAR.

Baron Sonnino, the Italian Minister for Foreign Affairs, stated on Thursday, amidst the applause of the Chamber, that the Government had decided to imitate the example set by the United Kingdom, France, and Russia at the outbreak of hostilities, and to pledge herself to make no separate peace. Furthermore, he added that Italy has decided to contribute to the defence of Serbia. This is in the highest degree satisfactory. It is true, of course, that Italy has been at war for a considerable time now, and that it has been understood that she is preparing to assist Serbia. But it is to be recollected that at first Italy carefully refrained from declaring war against Germany, pointing out, truly enough, that she had no direct grievance against Germany, whereas her relations with Austria-Hungary were such that she must either be an ally or an enemy of that Power. Gradually, as hostilities continued, war between Italy and Germany followed, but the feeling towards Germany was nothing like so strong as that against the Dual Monarchy. Consequently, until this declaration was made, Italy was perfectly free to come to any terms that seemed satisfactory to herself with the two Central European Powers, or any one of them. Furthermore, it is not to be forgotten, as Baron Sonnino very truly remarked, that it is part of the policy of Italy to consider the maintenance of the independence of Serbia as indispensable in the future for a satisfactory state of things in the Balkans. Therefore, Italy now has become, in the full sense of the term, one of the Entente Allies, and, like the rest of them, has pledged herself to see the War fought out to its ultimate and successful conclusion. Nothing could be more satisfactory. We welcome the alliance with Italy, for the feeling between this country and Italy has always been most cordial. When the unification of Italy took place we were always eager and ready to support her, though we did not find it necessary to draw the sword. And ever since the feeling between the two countries has been most friendly. We welcome, then, the adhesion of Italy, not only as a proof that our feeling towards that country is fully reciprocated, but also because we know the constancy of the Italians and the valour of the Italian Army. We entertain little doubt regarding the conflict in the Balkans. All along we have looked upon it as an additional proof that Germany is feeling herself being exhausted, and that she is trying, not merely to stir up fresh enemies against the British Empire, but to divert British energies so as to prepare the way for a peace that will be, to some extent at all events, satisfactory to herself. Now that the condition of things is being cleared up, that Germany and Austria-Hungary have committed themselves to the mad course of attempting to hold their positions, not only in France and Belgium, and in Poland and Galicia, but likewise to open up communications with Constantinople and thereby to make a desperate effort to stir up discontent in Syria and Egypt, we can see what real alarm exists amongst the two Central European Empires, and how very gravely they are concerned as to the rapidly approaching exhaustion of their resources. Furthermore, the act of Italy will not only make their enterprise madly ruinous, but will bring about the exhaustion more quickly than most people anticipated.

ACCUMULATED WEALTH.

[Communicated.]

It may be true that a Cabinet of business men would carry on the War much better than one composed of politicians, but if we are to judge by the speeches of some of them it would be very necessary to muzzle them. Perhaps, however, that would be one of the advantages of the change—that being business men they would muzzle themselves and take off their coats and work. If they were allowed to talk also the nation would soon be in a pretty muddle, if we are to take Sir Alfred Mond's recent effort as a fair specimen. Sir Alfred said himself that if he claimed to be anything, he claimed to be a business man. Everyone will readily grant him the title, and add, moreover, that he is a very able and successful business man to boot. At the same time, he is probably one of the clearest thinkers of to-day in practical economic questions, and yet in the House of Commons recently he uttered some sentences which can only have the effect of confusing folk who are not versed in business matters and misleading them into a state of mind which is highly inopportune and dangerous. In a word, Sir Alfred was trotting out once more that bad old "accumulated wealth" fallacy, which has already had so disastrous an effect in encouraging public and private waste and sending criticism and common-sense to sleep. "The argument," he said, "that we cannot afford this or that in view of the financial situation is extraordinarily exaggerated, and a nation whose capital is 24,000 millions cannot suddenly go bankrupt because it is spending five millions a day. The sum is huge, but the capital also is huge. We must liquidate our assets in order that we may use them to bring the War to a successful conclusion." It would be difficult to pack into a couple of sentences a string of statements more mischievous at the present moment than these. Uttered by a man who is well known to have been extraordinarily successful in business, the mischief that they may do is, of course, immeasurably enhanced. "We are so rich that it does not count" is the argument used, consciously or otherwise, by the spendthrifts of the War Office (who have at least the excuse that their first business is to equip, train and feed the Army); by the civil departments, which make business difficult and tie up our export trade in red-tape; by the luxury tradesmen, who tempt the public with huge advertisments to spend money on frivolities and absurdities which ought to be going into weapons and shells; and by self-indulgent citizens, who cannot see why they should stint themselves of any comforts and pleasures that they can afford. And now it is repeated and endorsed by a great captain of industry. Even if we grant Sir Alfred Mond's figure of 24,000 millions for our capital wealth, which is far above the amount usually estimated, it does not follow that we can look on a daily expenditure of five millions a day as a light matter. That we shall "suddenly go bankrupt" is, of course, not contemplated by any serious critic of our present financial position. There is no question of our going bankrupt suddenly or slowly; but we cannot spend five millions a day on war and continue to "wax fat and kick" in our private expenditure, and Sir Alfred does an ill service to the cause of economy when he calls the attention of the ignorant, in the street and in the departments, to our huge accumulated total of wealth. For by far the greater part of this huge total is of no use whatever for the War, and its existence is entirely irrelevant when we consider the finance of the War. Not only is it irrelevant, but the mention of it is misleading and fallacious. As he proceeds to say, "we must liquidate our assets," in other words, sell them. How many of them can we sell, and to whom? Who will buy our railways and factories and workshops, and docks and houses, and public parks and landed estates, and such other assets? We can pledge them, or their earning power, to a limited extent by borrowing on them in America and elsewhere. For the immediate purposes of the War they are useless, except as part of the machinery of production or for the purposes of income. Some of our assets we can sell, such as our securities, but we cannot sell them nearly fast enough to enable us to regard five millions a day as a matter to be met easily out of resources stored up in the past. We can only liquidate to the extent that neutrals will buy our assets or lend to us on them. For the rest, we have to pay for the War, not out of

accumulated capital, but by producing the stuff that is needed. That we can only do by forgoing stuff that we have hitherto consumed, radically altering our whole mode of life as a nation, so that all the labour and energy that is available can be devoted to making what is wanted for the Army. These things have been for months accepted in theory as a platitude, and ignored in practice by most of the more prosperous classes of the community. Now a great business authority invites us to ignore them by dwelling on our huge wealth as if it were in a form that could be shot out of a gun. "There is an idea," says this mentor, in another passage of the same speech, "that unless we produce wealth we cannot finance our Allies. We do not produce wealth; we produce commodities." What are commodities but wealth, and what is wealth but commodities? If we do not produce commodities we certainly cannot finance our Allies, and we can only produce the commodities required by our Allies if we cease, or check, the production of commodities required for frivolous and self-indulgent consumption. Sir Alfred points out, very truly, that we are no worse off if we make shells instead of motor-cars, and that making cheap pianos for the working classes does not help us to finance our Allies; and yet, almost in the same breath, by emphasising the fact of our huge accumulated wealth, he invites people who want pianos or motor-cars to go on buying them. "What do the Serbians want?" he asks. "They do not want money; they want men to defend them." But what use are men if they are not armed and supplied with munitions enough to cope with the enormous consumption of them that this War involves? Really, Sir Alfred seems to have wandered back into the Middle Ages, when a number of stout fellows with battleaxes in their hands were the deciding force in the great battles that sealed the fate of nations. Nowadays we want artillery and shells, and for them we want money or productive power. If it were only a question of men the Russians would long ago have been in Berlin. But the Russians lacked the productive power to make the necessary weapons and the money to buy them as fast as they were wanted, and so the Germans, who had the productive power, were able to drive them back across their own frontiers. In our case, too, productive power is all-important. We cannot increase it positively, but we can increase it for war purposes if we divert into war production forces that are now employed in production to meet the extravagance of all classes. The checking of this extravagance is one of the most serious financial problems that we have to face. Only by carrying it out can we supply the needs of the Army, reduce imports, increase exports, and check the adverse movement in the exchanges. We are not likely to carry it out if our business leaders talk at large about our 24,000 millions of capital as if those millions were practically available for war purposes.

IMPERIAL ORGANISATION AND THE WAR.

A TIME of war so widespread and so formidable does not appear, at first sight, to be well fitted for seriously dealing with the organisation of the Empire. But we venture to think that if our readers will carefully consider the matter they will change their opinions, and see that it is of the very greatest importance that we should, without delay, give assurance to the self-governing portions of the Empire that their rights are not forgotten, and that their claims are not pushed aside to a more convenient occasion. Nothing could well be more gratifying than the conduct of the self-governing Dominions, Commonwealths and Unions in the present great strugggle. They have with one accord acclaimed the decision of the Home Government to enter into the war to prevent the brutal aggression of Germany. And they have given proof of their real earnestness in so doing by the magnificent manner in which they have supported the Mother Country. Therefore, it is incumbent upon us of the old country to give them assurance that we recognise the splendid spirit in which they have acted, and are most eager to show our appreciation. Just now the Entente Allies are doing what they ought to have done at the very beginning, namely, calling into existence means by which they can continuously discuss, and come to agreement upon, all questions of military, naval and diplomatic action. It has been found—as, indeed, all previous experience ought to have taught us was the fact—that alliances are of comparatively little worth unless the several Allies are willing to subordinate their own individual interests to the common good, and to agree beforehand upon what course of conduct the common good requires. That is most prudent, and we trust that before very long its immense advantages will be made apparent to all the world. But we have not made any approach, at all events so far as the ordinary public is concerned, towards a concert of opinion with our own flesh and blood beyond the seas. Yet surely it never was so important as at the present moment that we should do so. We have already referred to the great services rendered by the self-governing communities of the Empire, and to the generosity with which they have lavished both blood and treasure. We ought to give them unquestionable assurance that we fully appreciate what they have done; and, furthermore, that we reckon as highly as they do themselves the advantages of continuing to the very end advising with them.

At the present time the self-governing communities within the Empire have proof before them, such as never hitherto existed, of the immense advantages of belonging to the greatest Empire in the world. As a broad, general rule, people were rather inclined to think that communities so widely scattered, and so prosperous and progressive as those, say, of Canada and Australia, were almost independent of the Empire. They had small fleets of their own, or they were preparing to construct them. They had a good military organisation. And their credit was excellent. Therefore, it was often argued that the Empire was to them of little importance, except that the Mother Country was always ready to lend to them on terms much lower than she would lend to foreign communities. Now it has been shown by unquestionable experience that the Daughter Countries, as well as the Mother Country, owe their freedom from invasion and internal trouble very largely to the British Navy. Almost from the very outbreak of hostilities the Navy has been able to keep the enemy's fleets locked up in their harbours, to drive their merchant marine from the seas, and, practically, almost to cut off all communication between the enemy and the neutral countries. All this shows what would be the result if care had not been taken to provide for us the greatest Navy the world has ever seen. Merchants in Canada, Australia, South Africa, New Zealand, and so on, are almost as safe in sending their goods across sea as they were while peace continued. And they enjoy that degree of safety because the fleets of the Empire are irresistible. We are not, in saying all this, denying the great services rendered by the fleets of the self-governing communities. On the contrary, we look forward to a time when those fleets will be greatly enlarged, and when practically the British Empire will be able to dictate peace because it will be able to forbid any aggressor to put out to sea. All this, great as is its value, is only part of the advantages which we all share—Mother Country and Daughter Countries alike—by the fact that we have the greatest Navy in the world, and are able to bottle up, in consequence, our enemies. The time will come soon when the populations of the self-governing Dominions, Commonwealths and Unions will grow very large. When that time comes, not only will the

British Empire be able to maintain the greatest Navy the world ever saw, but it will be able to send into the field, the greatest Army any single State has ever done. There are many foolish arguments, both in the daily and weekly Press, and particularly in the monthly and quarterly magazines, respecting the best way of maintaining peace for an indefinite time. There is, in reality, only one way, and that is for the real lovers of peace to combine together for the purpose of punishing every criminal Government that would make war. The British Empire alone, in 20 or 30 years, certainly in 50 years, if it holds together and acts with the same patriotism and the same union as it is acting now, will be able to forbid war. But if it were joined, let us say, by the United States and by Russia, can anybody imagine any coalition of enemies so mad as to defy the three Powers just named? It is impossible, then, to overrate the value of a well-organised, well disciplined and high-spirited British Empire.

Some of the self-governing Governments beyond sea have desired that an Imperial Conference should be held during 1915. Upon the whole, however, opinion has decided against that. We bow to the general opinion of the self-governing portions of the Empire. But we would ask: Is there any reason why a conference of the kind—not necessarily attended by every Prime Minister, but at the same time in continuous communication with each Prime Minister—should not meet in London, not so much to decide as to discuss all the problems in the way of a drawing closer of the relations between the self-governing portions of the British Empire? And when such discussions were completed, would there be any good ground for not publishing the whole of the arguments on all sides, so as to acquaint the public with the difficulties that stand in the way of a satisfactory arrangement? We have spoken so far only of the self-governing communities. But the problem of India is, to say the very least, at the lowest estimate as important as any other portion of the matter. It has been conceded, both by the United Kingdom and by the self-governing Dominions, Commonwealths and Unions, that India is henceforward to be represented at each Imperial meeting. But that will not be enough. We of the Mother Country must be prepared, in the first place, to recognise the loyalty and public spirit shown by India since hostilities began, and to extend the rights she now possesses. Furthermore, we must be prepared to take her into partnership in all matters of foreign politics. Last week we pointed out what a great army India to-day is capable of raising, even on the assumption that she is asked to enrol no more than 1% of her total population. But every year that passes the population and the wealth of India are increasing, and it is incumbent upon us to recognise the fact; to pay homage to the loyalty of the Indian people; and to concede to them at least a portion of the rights to which they are entitled within the Empire.

THE BALKANS.

Baron Sonnino's statement in the Italian Chamber on Thursday is the most satisfactory incident, not only of the week, but of many weeks, and promises to bring the crisis in the Balkans to an early and satisfactory conclusion. King Ferdinand of Bulgaria, it now turns out, has not merely hurried on the catastrophe, but has ensured his own destruction. How long things might have dragged out had he been more patient it is impossible to say. But his plunging into the conflict on the side of the two Central European Empires has brought about a state of things which we cannot doubt will quickly lead to a most favourable conclusion for ourselves. Italy has pledged herself now fully and frankly to the policy professed all along by the Entente Powers. She will make no separate peace; and, therefore, will insist that when peace is made it will put an end to Prussian militarism. Russia, it is also clear, is preparing a very considerable expedition for the Balkans. Russia, indeed, which called Bulgaria into existence and has treated that State ever since as a spoilt child, could not do less, for if she had allowed Bulgaria to help in the ruin of the Balkan Slav States she would have been false to all her traditions. Happily, our readers are aware, Russia herself is making great efforts to turn out an adequate supply of munitions. Japan is helping with the best of goodwill. And our own country, Canada, and the United States are all co-operating. We may be very sure, therefore, that Russia now has a sufficient supply of munitions to deal with Bulgaria; and, consequently, we may reasonably conclude that, whatever may be done with Bulgaria herself, the King, who has played the turncoat, will be got rid of. It is as well not to deal in predictions, for predictions are apt to hold up those who make them to ridicule. But the action of both Italy and Russia is well calculated to impress strongly both Greece and Roumania. It is easy to understand that the several Balkan States should be greatly impressed by the success of Germany in compelling Russia to evacuate Poland; and, therefore, that they should be exceedingly unwilling to risk a conflict with the victor. But while this must be said in fairness, the fact remains that Greece, while permitting British and French troops to land at Salonika, and to use its railroads, yet refuses to concede any of the demands put forward by the Entente Powers. At least, that is the general belief. Nay, more, if some of the statements published are true, King Constantine, in winding up his interview with Lord Kitchener, pointedly remarked that he could not depart from neutrality. Of course, we do not know the real facts; and we must not take newspaper statements for unquestionable truths. Still, it is not pleasant to have it repeated day after day that King Constantine—who is not only the brother-in-law of the Kaiser, and a Field-Marshal of Germany, but entertains strong German sympathies—has dismissed M. Venezelos from his councils, and insists upon retaining the right to maintain neutrality. Does that imply, we should very much like to know, that if British or French troops have to retreat into Greece, neutral Greece will claim the authority to intern them? While, then, we agree that the Prime Minister acted wisely in refusing, for the time being, to make any statement regarding Lord Kitchener's mission, yet we strongly hope that a full explanation will be given as soon as a favourable opportunity offers, and that the nation will be made clearly to understand whether we have not merely the right to land in Greece, but have the right also to withdraw into Greece, without disturbance of any kind from Greece, should we deem it necessary to do so. It is to be recollected that the British Fleet has absolute control of Greece. Therefore, there will be no excuse if we put a British and a French force into a position which is commanded by the British Fleet, and yet allow that force to be dealt with in a manner dishonourable to us. We admit fully the difficulties that confront Greece. We are not in the least inclined to join in the chorus of reprobation which is now addressed to her. We had our opportunity when Russia seemed to be carrying all before her in Poland and Galicia to use our influence for our own purposes in the Balkans. Rightly or wrongly, we refrained from doing so; and under existing conditions, therefore, we are not inclined to condemn the Greeks.

A little while ago, there were many persons amongst us who were opposed to a Balkan expedition, arguing that in war dispersion of force is usually fatal; and that our true course is to select the really decisive position, and to concentrate upon that our main effort. Much less is heard of that since Lord Kitchener started upon his mission, partly, no doubt, because the fault-finders hesitate to condemn a policy

approved of by the Secretary of State for War; and, partly, because full consideration has made it clear, even to those who have given consideration to war-like matters, that things have come to such a pass now that we should neglect our dearest interests if we did not take measures to protect Serbia and to open the Dardanelles. As yet the policy of Roumania is as doubtful as that of Greece. Roumania has favoured us even less than the latter country; for while Greece has permitted us to land our troops in her territory, Roumania has not in any way shown favour to us. Against this, however, it is to be recollected that Roumania is immediately and directly exposed to attack by the two Central European Empires; and as Bulgaria has taken action with those two Empires it is not surprising that Roumania should think first of her own interests. We have no intention, therefore, to scold Roumania, as so many of our contemporaries are doing. But it is plain that Roumania holds the key of the situation, and that the solution will largely depend upon Roumania's action. We have admitted that, as things stand at present, Roumania cannot be expected to face the two Central European Empires. But things would change completely if Russia should send a really strong force against Constantinople. She may do so either by land or by sea. She may, for example, from Sebastopol send what force she considers necessary to attack either Bulgaria or Constantinople itself; or, in alliance with Roumania, she might directly attack either Bulgaria or Turkey. That she is about to do one or other cannot be doubted after Baron Sonnino's statement. We shall refrain, however, from giving an opinion as to which course she ought to take. The Allied Powers, no doubt, will all fully consider the matter, and come to a well-weighed decision. All that is really necessary is that the force should be sufficient for the work intended for it, and we have no doubt now that Russia has the munitions necessary. It is true that Russia is an immense country; and her male population of fighting age amounts to very nearly 21½ millions; and that, therefore, to put forth her whole strength she would require immense supplies. But if Russia herself, Japan, the United Kingdom, the United States, and Canada are all working hard to give her what she needs, her receipts ought to be very large every week. It is not likely that she will enter upon active offensive operations in Poland during the height of winter Probably she will call up vast reserves, arm them, and train them, and so make ready for the spring. But her active operations will probably be restricted to where the climate permits of such operations. It ought to be possible, then, for Russia to send a very large army to deal with the Turks. If Roumania were satisfied that Russia was in a position to second her successfully, Russia might act through Roumania. If, on the other hand, Roumania is afraid of drawing upon herself the attacks of the Germans and the Austrians, Russia may find it most convenient to land an army from the sea in Bulgaria. Such an operation would at once compel the Bulgarians to withdraw from all their attacks upon the Serbians; and if the Russian force was sufficient it would very quickly dispose of the Bulgarians and probably soon compel Constantinople to surrender.

There are many other combinations which might be made. But it is useless to discuss these. When the time comes official information will be given by the Prime Minister, and our wisest course is to wait for that. Yet we consider that it is useful to point out at the present time that our position in the Balkans is by no means as difficult as some of our contemporaries delight in painting it. The British and French expedition, taken alone, may or may not be sufficient to deal with the Bulgarians, the Germans, and the Austrians, and at the same time to inspire respect in the other Balkan States. But it is to be recollected that Italy is one of the Entente Allies, and Italy recognises the desirability of taking part in the opening of the Dardanelles. Still more important is it to bear in mind that Russia has a population of fighting age larger than the two Central European Empires and Bulgaria added together; that the winter months prevent the Germans from undertaking formidable offensive operations in either Poland or Russia; and that, therefore, they are confined to opening the road to Constantinople, in the hope of extending the war zone. Therefore, we have thought it advisable to point out that Russia has the means, as well as the will, to act decisively against Constantinople; and that if she does so with full determination to win, the capture of Constantinople may turn out to be a much less serious affair than many critics are willing to admit. Even if Russia does not quickly use her immense reserves, the other three Entente Allies are quite capable of dealing with the situation. For it must never be forgotten that the British Fleet is supreme in the Mediterranean as elsewhere.

TALTAL RAILWAY.

As foreshadowed by the dividend announcement, the report of the Taltal Railway Company for the past year makes a poor showing. The decrease in gross earnings was as much as £176,700, or 57%, and as the saving in expenses was only £76,500, the decline in net earnings amounts to £100,200, or 65.1%. The volume of traffic passing over the line was very greatly reduced. The aggregate weight of goods carried has been 192,572 tons, as compared with 478,697 tons, a decrease of 59.77%. This large reduction is attributable to the closing of most of the nitrate oficinas soon after the outbreak of war. The quantities of nitrate, coal, and oil fuel have been 264,391 tons less than in the previous year, equal to 92.40% of the total decrease. The number of passengers carried has decreased from 83,954 to 45,974, equal to 45.24%. Although the profit available for dividend is only £30,877, or not much more than sufficient to pay 3½% on the shares, the directors feel justified in maintaining the dividend at 6% in view of the improved outlook for the nitrate industry and the satisfactory position of the Company. The prospects for the current year are certainly much brighter. The price of nitrate has risen very considerably, and there appears to be a fair demand. Freights to Europe and the United States are not so excessive as formerly, and there are more steamers available for the traffic. "We are already," the General Manager states, "bringing to port a considerable portion of the heavy stocks of nitrate which had accumulated in the interior, and at least two of the more important oficinas served by us are about to recommence the elaboration of nitrate. Just now there is considerable difficulty in getting workmen back from the south as quickly as the nitrate producers require them, and this trouble will doubtless delay the opening of other oficinas for some time; but there is every indication that the nitrate industry is recovering from last year's depression, and our railway will naturally benefit by the improvement." This is already apparent in the results secured so far in the current year and in the first four months the gross receipts amount to £65,461, an increase of £2,648, or 4.2% compared with a year ago. The working expenses, on the other hand, total £31,036, and there is thus a profit for the period of £34,425, which, after providing for Debenture service, works out at the rate of over 8% per annum on the £900,000 of capital. This, the Chairman stated at the annual meeting, corresponds with the hopes of the General Manager for the present twelve months, provided, of course, that there are no troubles or set-backs in the nitrate trade. The price of the £5 share has now risen to 5⅛xd., and on a 6% dividend basis the yield afforded is £5 17*s.* 1*d.* per cent.

Financial Notes.

On October 1 the Secretary of the United States Treasury made certain changes in the form of the Treasury statements showing the condition of the Treasury on that day; the principal cause of the objections being that the change has shown a material increase in the available cash balance. The change has excited much comment, for it is objected that where a large increase is shown in the available cash held between the evening of the last day of September and the morning of the first day of October, without any apparent paying in of cash, the public is misled. As a matter of fact, the changes are not open to the suspicion which they have excited. One of them, indeed, was actually directed to be made by an Act of Congress passed some years ago, but not acted upon until now. The increase is due mainly to two alterations. The first is that the item of "Disbursing Officers' Balances" is now for the first time excluded from the liability side of the "General Fund." But, as already observed, that treatment was ordered by Act of Congress some years ago.

The second material change is the excluding of the amount deposited by National Banks for the retirement of National Bank notes not yet paid out for that purpose. This change has not been authorised by Act of Congress, and, therefore, is open to criticism. In actual fact, however, it is not likely to have any evil influence upon United States finance. The National Banks of the United States are authorised to reduce their note circulation by certain amounts within definite times, provided they lodge the money necessary for calling in and paying off the notes in circulation. Heretofore, the money paid in has been treated as a current liability. Under the new arrangement it is treated as part of the debt of the United States. The actual liability, then, is admitted just as it was before. But it is treated now as part of the debt of the United States instead of being a current liability.

Perhaps the old form is more preferable than the new. But that any evil influence can flow from the change does not seem probable. The money is held in the Treasury to repay notes actually in circulation, and it does not seem to matter much under what heading it is entered. It may be added that notes called in often remain in circulation for a very long time after they have been called in. The notes pass from hand to hand throughout the Union. The ordinary holder pays no attention to the notices issued that notes of certain numbers of certain banks have been called in; and it may be many years, therefore, before they are actually paid off. Still, the fact that the change has called forth much criticism is interesting as showing how completely the circulation of the United States consists of paper, and how carefully any tampering with that paper is noted and disliked.

The new banking system of the United States completed its first year of existence on November 16. No statement was issued by the Board reviewing the year's activities of the system. But it is currently reported that the whole of the District Banks earned together for the year 2% on their capital. It will be remembered that there are 12 of these District, or Regional, Banks; that they have derived their capitals from the National Banks; and that each District or Regional Bank presides over all the National Banks in the district. Therefore, the mere statement that the 12 banks in the aggregate have earned 2% for the year tells us very little; for some of those banks may have earned very much more, and others may have earned nothing at all. It is stated, however, that the aggregate paid-up capital amounts to nearly 11 millions sterling; that the total deposits approach 75 millions sterling; and that their cash holdings are not very far short of 66 millions sterling. The re-discounts of the 12 banks are only £8,600,000.

The explanation offered for the smallness of the business done by the Reserve Banks is that even yet, great as is the activity of business in the United States, money is very plentiful and very cheap; that, therefore, the National Banks have not had occasion to apply to the Reserve Banks for the re-discounting of bills, and that probably there will not be very much business of the kind done unless trade improves very much farther. It would seem, in short, that the activity of trade in the United States is very largely confined to dealings with the *Entente* Powers. Putting aside the United States itself, the neutral countries are not very wealthy; and none of them are very eager traders. The *Entente* Powers confine their trade very largely to matters which subserve the War in some way or other. Furthermore, it is to be remembered that trade with the two Central European Empires is practically cut off, since German and Austrian ships are driven completely from the sea.

A meeting under the presidency of the Lord Mayor is to be held in Merchant Taylors' Hall, Threadneedle Street, on Tuesday afternoon, December 7, at 3 o'clock, on behalf of the extensive war work of the Church Army. City men particularly are asked to attend.

UNION PACIFIC RAILROAD.

A STRONG CORPORATION.

It is no exaggeration to say that the Union Pacific is one of the strongest railroad corporations in the United States, whether judged from the point of view of physical strength or financial stability. In recent years practically the whole of its road and bridges have been entirely reconstructed and adjusted as to curvatures and gradients. On the principal section of its main line of nearly 1,000 miles, stretching between Council Bluffs and Ogden, 757 miles have been double tracked. Its equipment is of the latest powerful, capacious type; and financially the Company is equally strong. In the past year, despite the adverse influences, its net profit has been no less than $24,411,000, which was sufficient to have paid a dividend of 11% upon the stock. A very large part of the money expended upon improving and extending the road since the nineties has been provided from surplus profits. After the payment of a 33% bonus in March 1914, calling for $74,000,000, a reserve of $50,000,000 has been created for depreciation of securities, and there is an undivided surplus of $97,000,000. The Company has in hand sufficient funds to provide for all double tracking and extensions needed for a long time to come, its free investments amounting to $193,000,000. These investments are distinct from its interests in affiliated undertakings, which consist of $89,000,000 of stocks and $104,000,000 of bonds, equipment obligations, and short term Notes. Of its total investments about $80,000,000 consists of money derived from the sale of its Southern Pacific stock.

By reason of its strategical position the line must for all time form the main artery of communication between San Francisco and Chicago, with the aid of the Central Pacific in the West and of the Chicago and North-Western in the East. When the separation of the Union Pacific and the Southern Pacific was ordered by the Courts, permission was granted for the Union Pacific to acquire the Central Pacific, which may be regarded as its natural outlet to San Francisco, at a cost of $104,000,000, and all arrangements to that end were made. Owing, however, to difficulties having been placed in the way of carrying out the proposition by the Californian State Railroad Commission, the acquisition was not then made, and the scheme had to be dropped for the time being. The Attorney-General of the United States has, however, now brought a suit against the Southern Pacific to compel that Company to dispose of its interest in the Central Pacific on the ground that the union of the two undertakings violates the Shearman Anti-Trust Law. This suit was instituted as far back as February 1914, and up to the present no decision has been handed down, but it is anticipated that no long delay will occur before judgment is given. The belief generally prevails that the way will then be paved for the acquirement of the Central Pacific by the Union Pacific, to whom it is essential. The means of paying for the Central Pacific if the purchase becomes feasible are amply provided for out of the large realisable investments referred to above.

Very few American railways have a more promising future than the Union Pacific, in view of its access to the Pacific Coast, where population may now be expected to increase very rapidly in consequence not only of the existing railway facilities and relatively cheap railway transport, but of the new Panama Canal, which will enable the Pacific Coast States to compete more effectively with the rest of the country in both the home and foreign trades. Striking evidence of the skill with which the traffic is conveyed is shown by the results for the twelve months to June 30 last. During that period, notwithstanding the abundance of the crops of 1914, there was a diminution in the quantity of freight conveyed in consequence of the general trade depression, and the freight earnings declined $3,271,000, or 5.2%. The depression also had an adverse effect upon the passenger traffic, which declined $1,792,000, or 8.7%. Thus for the year gross receipts declined $4,887,000, or 5.3%. To offset this loss additional efforts were made to reduce the cost of conducting transportation, where a saving of $2,480,000, or 9%, was effected. This economy was secured by increasing the freight-train load from 430 tons to 442 tons notwithstanding the reduction in traffic, by a reduction of about 4% in the price of fuel, and by greater economy in the fuel bill by reason of the saving in train mileage and greater care in avoiding waste.

In the aggregate operating expenses were reduced $3,004,000, and after allowing for the payment of $437,000 less for taxes, the decline in net receipts was no more than $1,446,000, or 4.6%. Miscellaneous income was $4,133,000 lower, due principally to the non-receipt of dividends on Baltimore and Ohio Preferred and Common stocks, and Southern Pacific stock formerly held but now disposed of. On the other hand, interest and other charges were $877,000 lower than in 1913-14, owing mainly to a debit for hire of equipment in the previous year having been converted into a credit and the conversion of bonds into Common stock. Thus on balance the net profit for the Common was $4,701,000 lower at $24,411,000. After the payment of the 8% dividend there remained a surplus of $6,628,000. How the results for last year compared with those for previous periods will be evident from the accompanying Income Statement.

Income Statement of the Union Pacific System.

* Calendar year. † Deficit.

At the outset of the business depression the Company resolved to continue without any modification the policy of maintaining the property fully up to its high standard, and consequently the expenditures upon maintenance of way and structures last year were substantially the same as in the previous year, there being an increase of $28,000 on the year, whilst maintenance of equipment outlays were only $416,000 lower. Expenditures upon the road and equipment combined last year represented 26.46% of the gross receipts, a higher proportion than for any previous year. By reason of economies the ratio of conducting transportation to gross receipts was reduced to 28.76%, which compares with almost 32% as recently as 1911-12. The continued high level of outlays upon maintenance, and the saving effected in conducting transportation last year, will be apparent from the following statements:—

Railway Expenses of the Union Pacific Railroad.

(*a*) New basis. (*b*) Old basis.

The average rate obtained last year was .968c., with an average density of 771,000 ton miles per mile of road.

The outlook for the current year is for results very much better than last year. Farmers in the Western States last year obtained unprecedented income from their great crops, while this year the crops are again abundant and prices are still very remunerative. The increased spending power is likely to result in much larger purchases of general goods. Both in Kansas and Nebraska, the production of corn is considerably in excess even of the unprecedented crop of 1914, and the crop of winter wheat in Kansas is larger than ever before. The crop of Nebraska is smaller than in 1914, but it is still larger than in 1913. The crops of oats, too, compare very favourably with those for former periods. Some idea of the greatness of the crops in these two States in the past season will be evident from the appended statement:—

Principal Crops in Union Pacific's Territory.

	Corn			Winter Wheat			Oats		
	1915	1914	1913	1915	1914	1913	1915	1914	1913

Nebraska	212·2	174·0	114·2	113·5	176·3	86·5	62·6	69·6	59·6

* 000,000's omitted.

Comparison will be made in the coming months with the relatively poor gross receipts obtained last year, and by the end of the year the whole of last year's shrinkage in gross earnings will be regained. Already, in the four months to October, gross receipts have expanded $1,329,000, and inasmuch as there was an increase of only $422,000 in operating expenses and taxes, the addition to the net earnings was $907,000. Apart, therefore, from any further improvement in net receipts in the last eight months of the year, the net profit is equal to as much as 11½% upon the stock. The results for the first four months of the current fiscal year, and the figures with which comparison will be made in the coming months, will be apparent from the following statement of the course of earnings and expenses since July 1914:—

Recent Course of Earnings & Expenses, Union Pacific.

The Company's bonds are exceedingly well secured, for at the present time, in order to meet interest and other charges calling for a little over $15,000,000, there is available a net income of about $44,500,000. The covering of all interest charges practically three times over clearly indicates the ability of the Company to dispose of bonds at any time it may desire to issue them for the purpose of extending or further improving its system.

The 4% Preferred stock is now quoted at 88, at which the return afforded is, roughly, 4⅞%. The Common stock stands at 148¾, and the yield given from the 8% distribution is 5¾%, allowing for accrued dividend and the difference in exchange.

The prices of, together with the yields afforded by, the Company's principal securities are set out below:—

ATCHISON RAILWAY.

NEW PREFERRED STOCK.

The Atchison Railway has applied to the Kansas State Railroad Commission for permission to sell $10,000,000 of its 5% Preferred stock. This is the first occasion during the 20 years the present Atchison Railway has been in existence that the Company has raised money by a direct stock issue. The authorised amount of the Preferred stock is $131,486,000, of which $114,200,000 has previously been issued, the balance of $17,286,000 having been retained in the treasury for the acquisition of auxiliary lines and for improvements, extensions, &c. Subject to the approval of the Kansas Commission, the whole of the new stock has been disposed of to private investors by Messrs. J. P. Morgan and Company at a price understood to be 98½. The net price of the old stock in New York is about 99, the existing quotation of 101½ including about $2 of accrued dividend. Our calculation of existing profits is as follows:—

Estimated Profits of Atchison Railway.

Net profit, year to June 30, 1915	$24,131,000
Additional net receipts, 4 months to October, 1915	787,000
Estimated reduction in interest charges, 1915-16, through conversion of bonds into stock	126,000
Estimated existing profit	25,004,000
5% on $124,174,000 of Pref'd. stock now outstanding	6,208,000
Balance for Common stock	*18,836,000
6% dividend on Common stock	12,029,000
Surplus	6,807,000

* Equal to 9·4% on Common stock.

The Preferred stock is quoted in London at about 107½, at which the yield afforded is £5 1*s*. per cent. The Common stock is at 112¾%, and, allowing for exchange, the yield is about 5⅝%.

BALTIMORE AND OHIO RAILROAD.

NEW BOND ISSUE.

The announcement has been made in the past week that the Baltimore and Ohio Railroad has disposed of $60,000,000 of 5% bonds through its bankers, Messrs. Kuhn, Loeb and Company and Messrs. Speyer and Company. The bonds were underwritten at the price of 98. They were, however, offered to the public at par, and are understood to have been oversubscribed. The issue is made under the new General Refunding and Improvement Mortgage sanctioned by the stockholders twelve months ago. Under this mortgage $600,000,000 of bonds were authorised to be issued in series, as required for refunding purposes and for improvements, extensions, &c. The new money is needed in part to meet maturing obligations, the Company having outstanding $40,000,000 of 4½% Notes, of which $20,000,000 are due June 1917 and the balance a year later. All the Notes of either or both series, but not part of a series, may be redeemed at the option of the Company on any interest date, on six weeks' notice, at a premium equal to one-fourth of 1% of the principal amount thereof for each six months between the date of redemption and the date of maturity, together with accrued interest. In recent years all new financing has been done by means of the issue of short-term Notes, pending the completion of the financial plan under which the broad General Mortgage was authorised, and the return of more favourable conditions to enable long-term financing to be undertaken. Last week we dealt at length with the improved position of the Company. After paying off the floating debt about $20,000,000 of additional capital will be available with which to provide for further improvements and extensions to the property.

"Tables for Calculating Dollars into Sterling" at from $4.60 to $4.79⅛ to the £, in Rates varying by 1/16, with a Table showing Decimals of £1 Sterling. (London: Effingham Wilson, 54 Threadneedle Street, E.C. 2*s*. net.)

ARGENTINE NORTH EASTERN RLY.

In accordance with the scheme of arrangement of July 21 last the half-yearly interest, due January 1, 1916, on the "B" Debentures and "B" Debenture stock of the Argentine North Eastern Railway Company will be satisfied by funding scrip to bearer. This scrip is issued at par, and bears interest at the rate of 5% per annum, and is redeemable at par subsequently either out of revenue or by the issue of new "B" Debenture stock. The earnings of the line are now showing satisfactory recovery, and the outlook is much more promising. The announcement that the directors of the Company, in conjunction with those of the Entre Rios Railways, have decided to adopt a joint administration is all to the good, as it implies a closer union of interest, which is bound to be to their mutual advantage. The two lines form a through trunk system between Paraguay and Buenos Ayres. The one is complementary to the other, and whilst amalgamation in its widest sense, although much to be desired, is not yet considered feasible, the step now taken may possibly lead to a still closer fusion of interests later on. We deal fully with the position and prospects of the Entre Rios Railways in the following columns.

ENTRE RIOS RAILWAYS.

MORE PROMISING OUTLOOK.

The past year has been one of exceptional difficulty for the Entre Rios Railways, and being a young Company, at any rate in its present form, it has felt the crisis much more acutely than the older and more established railway undertakings of the Republic. With the outbreak of war the import trade of Argentina was almost entirely suspended, and in this way the railway companies lost a large and profitable traffic. To this misfortune must be added, so far as the Entre Rios Railways are concerned, the partial failure of the crops in the districts served and ten months of incessant rain. Following as it did on a year of exceptionally bad weather in 1913-14, the conditions of working were extremely unfavourable, and as a consequence heavy losses have been incurred. The decrease in gross earnings was as much as £172,000, or 28.2%, and as this was accompanied by a reduction of only £6,000 in working expenses, the net earnings at £111,000 show a decline of no less than £166,000, or nearly 60%. Indeed, the net results for the year are the poorest since 1906, when, it will be recollected, the system was very much smaller than it is at present, and the extension to Buenos Ayres had not then been completed. Unfortunately, capital charges in the meantime have largely increased, a considerable amount of money having been spent in recent years in reorganising, extending, and improving the system, and whereas nine years ago Debenture issues were non-existent, now interest on Debenture capital calls for a sum of over £158,000. In addition to this, an expense of nearly £11,000 has been incurred in repairing flood damage, which is charged off against revenue. There is also a loss of £6,000 to be made good in respect of working a Government line, whilst £4,000 is reserved for doubtful claims, &c. On the other hand, nearly £11,000 has been received from miscellaneous sources, including a transfer of £8,000, balance of fire-insurance fund, and the net result is a loss, after meeting all revenue charges, of £61,000. Deducting from this the balance of nearly £12,000 brought forward from the previous year, the net deficiency is £49,000, against which the Company holds fully-paid shares of the French Railway Company of the Province of Santa Fé equivalent in nominal amount to £50,000. Thus the exceptional losses of the past twelve months have been fully provided for, and the Company starts the new year with practically a clean sheet. The severity of the crisis and the effect it has had on the Company's prosperity may be

gathered from the fact that in 1913-14 there was a profit in excess of charges of £135,000, a sum equal to the full dividends on the First and Second Preference stocks, with a surplus of over £6,000. The income statement of the Company for the last four years is set out beneath:—

Entre Rios Railways.

* Includes £67,669 received from Argentine Railway Company in respect of guarantee under working agreement, of which £43,894 would have been payable out of future surplus revenue.

† Includes £10,957 for flood damages, £6,325 loss on working National Government Eastern line, and £4,109 reserved for doubtful claims, less £8,321 balance of fire insurance fund transferred.

‡ Against this the Company holds for the credit of revenue account, pending realisation, fully paid shares of the French Railway of the Province of Santa Fé, equivalent in nominal amount to £50,000.

The outlook for the Company is much more promising, and a steady recovery of lost ground is now in progress. The import trade of the country will, it is true, not revive until the War is over, and general business may be restricted as long as hostilities last. But with Argentina rapidly growing in wealth as a result of the great demand for its produce at enhanced prices, the moment peace is restored it will be in a position to enter the world's markets and buy freely all the material it requires to continue the development of the country so seriously retarded by the unprecedented happenings of the last few years. Meanwhile everything depends on the agricultural and stock-raising industries, and here fortunately the position leaves little to be desired. The camps in the Province of Entre Rios are reported to be in good condition, and the wheat and linseed crops now being harvested promise a good yield. The favourable reports received from the General Manager are borne out by the results for the first four months of the current year, which show that the gross receipts have been £165,241, against £124,489, and the net receipts £45,411, as compared with £18,357, the period being that of least traffic. The comparison is as follows:—

Results for Four Months July 1 to Oct. 31.

	1915	1914	—Inc. or Dec.—	
	£	£	£	%
Gross earnings	165,241	124,489	+40,752	+32·7
Expenses	119,830	106,132	+13,698	+12·9
Ratio	(72.53)	(85.24)	−(12.71)	—
Net earnings	45,411	18,357	+27,054	+147·8

The Company is therefore fully earning its interest charges, and future increases will consequently represent profit for dividend on the share capital. The increase of 10% in freights and fares since the beginning of October will help the Company materially, and will assist in neutralising the effects of the difficult circumstances under which the railways have now to be worked. Having regard to the high price of coal and the adverse effect this will have on future working costs, it is satisfactory to note that the Company has reverted to wood-burning as far as practicable, and although the organisation may take time, it will, in the long run, mean considerable economy of coal fuel and a saving in transportation expenses. On the whole, therefore, the immediate outlook is quite satisfactory. Looking to the more distant future, it has to be borne in mind that the line is yet in its infancy as a through trunk system to Buenos Ayres, and that much of the capital recently spent on extensions and improvements has yet to bear fruit. Until last year's set-back considerable progress was in evidence, although as a fact the Company suffered considerably from a series of wet seasons and a succession of disappointing crops. However, the growth of business was appreciable, as is evident from the following comparison of both the passenger and freight traffic since 1905:—

Passenger Traffic.

Year ended June 30	Miles Operated	No. of Passengers	Passenger Mileage	Passenger Miles per Mile of Line	Average Receipts per Passenger per Mile	Passenger Receipts
					d.	£
1915	730	361,378	18,668,914	25,492	1.28	98,926

1905 ...	472	420,161	28,378,664	60,124	1.14	130,613

The freight traffic consists of a variety of produce, general goods forming a not inconsiderable proportion of the total. As the new lines are developed and the virgin lands surrounding them are brought into cultivation, the traffic both in cereals and in general goods will grow correspondingly, and with the prospects of a more marked development of interchange traffic via the Argentine North-Eastern and the Paraguay Central Railways to and from Buenos Ayres, the future appears to be distinctly hopeful. It is satisfactory to note that in the past season the through traffic in oranges over the Company's main line to Buenos Ayres provided a record tonnage.

The nature of the freight traffic and the variety of commodities transported over the system will be seen from the summary appended:—

Freight Traffic, Entre Rios Railways.

Another factor of importance is the probability of much greater economy of operation as traffic improves. Last year cannot, of course, be taken as a criterion owing to the abnormal conditions prevailing, but seeing that in the two preceding years there was a drop from 61.83% to 54.51% in the ratio of expenses to receipts, it is clear that the improvements effected in the road and rolling stock, and the more scientific

methods now adopted in handling the traffic, were beginning to tell in favour of the Company, and are likely to become still more effective as business improves and conditions generally become more normal. Owing to the bad weather last year's outlays upon maintenance of way increased from £49,428 to £71,228; but with this exception practically every other item of expenditure was curtailed compared with the preceding year, although in proportion to the gross receipts an increase is shown. A comparison of the expenditures of the various spending departments and the proportions of such expenditures to the gross receipts in each of the last three years is set out beneath:—

Working Expenses, Entre Rios Railways.

Year ended June 30—	1915		1914		1913	
	Amt.	Per Cent. of Gross Receipts	Amt.	Per Cent. of Gross Receipts	Amt.	Per Cent. of Gross Receipts

The substitution, at any rate partially, of wood fuel for coal will help the Company materially through a period of abnormally high coal prices, and another favourable sign of the times is to be found in the trials about to be made of burning oil fuel on the ferry-boats, which, if successful, should bring about still greater economy of operation.

An event of interest which occurred during the past year is the decision taken by the board, in conjunction with that of the Argentine North-Eastern Railway Company, to adopt a joint administration, which became effective on February 15, the administrations of the two lines being transferred to Concordia. It has long been hoped that an amalgamation of the two systems would sooner or later be brought about, to their mutual advantage, and the step now taken is probably the prelude to a complete fusion of interests in its widest sense.

From all this it will be obvious that the set-back experienced in the past twelve months is likely to prove of quite a temporary character. The losses incurred have undoubtedly been severe, but the conditions prevailing have also been unprecedented, and when normal times again return there is every reason to anticipate a growth in earnings and profits the like of which has not yet been witnessed, and we venture to predict that within a relatively short time not only will the Preference stockholders be in receipt of their full dividends, but that substantial distributions will be forthcoming on the Ordinary capital. To show the progress which the Company was making prior to the outbreak of war we give herewith a retrospect of the main results of working for the past 10 years:—

Entre Rios Railways.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

A RETROGRADE POLICY.

UNDER the regime of Sir Thomas Sutherland the reports and accounts of our premier shipping Company formed a model document, and both shareholders and the investing public were able to form a perfectly clear idea of how the Company stood. The reports were very full and gave ample information as to the working of the Company. The accounts were presented in ample detail, so that it was possible to follow the fortunes of the Company intelligently, and gain such information as is desirable for a shareholder to obtain as regards the concern in which he is a partner. Twelve months ago a change was made condensing somewhat the form of account, thereby ensuring "a certain privacy" in regard to the internal management of the Company's business, but the report added, and we italicise the important clause of the statement, "it will be found at the present time that *all those particulars which the public may be considered entitled to possess*, such as the amount of depreciation, insurance, mail subsidy, &c., are clearly set forth." Since the publication of that statement Sir Thomas Sutherland has resigned the chairmanship of the Company and handed over the management into other hands, his retirement following closely on the absorption of the British India Steam Navigation Company by the P. and O. Company. Lord Inchcape, the Chairman of the absorbed concern, has now become the Chairman and one of the managing directors of the P. and O. Company, and it must be assumed that the new Chairman is responsible for what must be described as a retrograde step in presenting the accounts, and the bad policy pursued by the British India Company has been introduced into the P. and O. Company. Only twelve months ago, as pointed out, it was acknowledged that the public were entitled to certain particulars. Now these particulars are not given, and presumably it is now considered that the public is not entitled to them. Why? The model accounts issued by Sir Thomas Sutherland have given place to a mere travesty of accounts under Lord Inchcape. Formerly shareholders and investors were given information as to the total receipts of the Company, while details were also afforded as to the expenses of running ships, the amount spent on administration, and the sums devoted to insurance, and, even more important, the amounts written off for depreciation were definitely shown. In the present accounts not the slightest information is afforded on any of these points, and the following comparison speaks very loudly as regards the change that has been made:—

	1915	1914	1913
Revenue—	£	£	£
Passage money, freights, charters, interest on investments, &c. ...	No information	4,881,045	4,993,948

We are aware that the directors of certain companies have in the past decided to withhold from their shareholders such information as the directors of the P. and O. Company have hitherto afforded, among the chief offenders being the old Union-Castle Company and the Royal Mail Steam Packet Company. And especially in the case of the latter concern, the plea was made that the information was withheld owing to the undesirability of affording material valuable information to competitors, the chief bogey being "German competition." This particular bogey must now at any rate be laid low. The new Chairman of the P. and O. Company does not even pay his shareholders the compliment of informing them why the change has been made, and the only reference to the matter is the abrupt statement that the form in which the accounts are submitted "has been simplified." To such an extent, indeed, has simplification been carried that for practical purposes the accounts might almost have been withheld altogether. Not only are the figures with regard to the working withheld entirely, and not only is the amount written off for depreciation not stated, but the balance sheet has also been "simplified," and in place of a detailed statement we now have the following items lumped together in one sum, namely, "coal, naval and victualling stores, freehold and other property, workshops and machinery, wharves, moorings, &c., sundry investments, and cash at bankers and in hand"—a veritable hotch-potch.

In the absence of any reasons for the retrograde policy now initiated, it is perhaps but natural to assume that the withholding of information to which shareholders and the investing public are entitled is due to the desire of the board for concealment. And the impression is given that they wish to hide the very large profits that the Company has apparently made.

In so far as it is possible to compare the profits for the twelve months to September 30, 1915, with those of the previous year, it would appear that a net profit of £594,161 has been secured, as against £354,469. This, however, is not an exact figure, inasmuch as an adjustment should be made with regard to the insurance against war risks. For the previous year the charge for this item, covering, of course, only eight weeks, was £31,000. The profits for the twelve months to September 30 last have had to bear a premium of over £250,000, so that, taking this item into account, the more correct comparison would be roughly a profit of about £800,000, as against the actual £354,000 for the previous year. The usual distributions are made, and a sum of £100,000 has been added to the provident good-service fund.

We further compare the manner of distributing the profits for the past six years:—

Year ended Sept. 30—	1915	1914	1913	1912	1911	1910
	£	£	£	£	£	£

* No information.
† Includes £25,000 written off goodwill of Blue Anchor Line.

It is pointed out that, notwithstanding the fact that a large number of the Company's steamers were commandeered by Government for war purposes, and that 31 of the ships are still in Government service, no mail departure has had to be abandoned, and the services have been satisfactorily maintained, though at much extra cost. The freight market ruled high during the last nine months of the year, but the Company did not thereby benefit to any extent, their steamers for the most part being necessarily restricted in cargo capacity owing to the high speed required by the mail contract, and the large space occupied by mails and parcels post. It is also pointed out that the expenditure on working, maintaining, and running the steamers has increased enormously owing to the advances in wages and to higher prices of stores and coal, while delays in loading and discharging at all ports have lengthened the duration of voyages while further adding to the cost. Rates of charter for vessels commandeered by the Government have been very moderate, shipowners "having displayed a patriotic disposition to assist the Government in the present great emergency." The book value of the fleet is shown as £4,507,159, representing a tonnage, excluding the boats building, of 489,644 tons. Twelve months ago the book value of the fleet was shown as £3,299,546, representing a tonnage of 501,167 tons. It will thus be seen that the book value of the fleet is much higher than it was twelve months ago, and the inference would rather be that the allowance for depreciation has been on a smaller scale. We set out herewith in the attenuated form now available the liabilities and assets of the Company as at September 30 last:—

LIABILITIES.	£	ASSETS.	£
Issued share capital ...	4,837,874	Steamers, tugs, &c. ...	4,507,159
3½% Debenture stock ...	1,800,000	New ships...	250,220
Reserve fund	1,374,000	Coal, property, &c. ...	6,453,945
Contingent fund	450,000		
Provident fund	150,000		
Bills payable	2,271,480		
Profit and loss	353,970		
	11,217,324		11,217,324

Naturally there has been no opportunity to lay down new ships in the past twelve months, and the two mail-steamers which are under construction, and which in the ordinary course would have been delivered this autumn, will not be completed for some considerable time, the builders having been obliged to devote their attention to Government work. Instead of investing the amounts set aside for depreciation in new tonnage, as would have been the case in normal circumstances, the directors have placed them, together with the proceeds of certain securities which have been sold, in the Government War Loan and Treasury Bills, and doubtless this step is partly responsible for the fact that the book value of the fleet is now higher than it was twelve months ago. Attention is drawn in the report to the fact that a serious loss has been suffered through the fall in the value of the securities in which the reserves are invested; "it is difficult to say what the depreciation is in the absence of a free market, but it amounts to a very large sum, the greater portion having been caused by the War."

It is needless to recall, we are sure, that the Company has been well and conservatively managed throughout the whole of its career, that it has been placed in a very strong position, and there is no doubt that under the able management of the present managing directors the prestige of the Company will be very fully maintained. The chief blow to that prestige is the policy of concealment that has now been initiated, and we sincerely trust that the board will reconsider the matter and once again afford the public all those particulars which they "may be considered entitled to possess." The very strong position built up by the Company, the great state of prosperity which it has consistently enjoyed, the substantial return afforded the shareholders, and the large premium at which the Deferred stock stands in the market, all afford the most ample evidence that the policy of openness that has previously prevailed has not injured the concern, but has rather aided it, and unless Lord Inchcape is able at the meeting on Wednesday next to give the fullest justification for the

new policy, we trust the shareholders will take matters into their own hands, and insist on the publication of the information which they have previously received.

The yields on the various securities range between £5 1*s.* 5*d.* per cent. on the Debenture stock, and £5 19*s.* 7*d.* per cent. on the Deferred stock. All classes of capital are attractive shipping investments, the three prior securities being, of course, of the nature of gilt-edged investments, while the Deferred stock, in view of the strong position, cannot be considered overvalued.

Herewith we recapitulate the capital in issue, prices and yields afforded:—

Amount £	Description	Par £	Price £	Dividend %	Approx. Yield £ s. d.
800,000	Debenture stock	100	70	3½	5 1 5
1,000,000	2nd Debenture stock ...	100	69½	3½	5 2 2
3,040,000	Preference stock	100	97⅓	5	5 5 3
1,797,874	Deferred stock	100	292	15*	5 19 7

* Free of tax.

THE GOVERNMENT AND THE WHEAT TRADE.

The decision of the Government to establish a wheat reserve is happily not a case of being wise after the event, for the emergency is yet with us, and a stable wheat market will be a distinct asset—one might almost call it an additional road towards victory. Had the decision, however, been come to on the kalends of August 1914 instead of the kalends of December 1915, the nation would have saved 20*s.* per quarter on every quarter now to be purchased. Into what that quantity will or is to be inquiry is not desirable in the national interest, but if public counsel is right it should not be given on the too easy lines of any "wise saw," such as "not to spoil the ship for a halfpennyworth of tar." The world production this new cereal year is abundant, and the natural tendency of wheat prices, as indicated in contracts for 1916 shipment, is towards a somewhat marked decline.

With respect to the cablegrams of Sunday and Monday last we are asked officially not to discuss them, and not only shall we observe that request in the spirit as well as in the letter but would tender our very hearty sympathy to overworked Cabinet Ministers, who seemingly cannot get even the Day of Rest in security against what can only be described as sheer fatuity on the part of officials who have previously been upheld in matters of the most ridiculous over-cautiousness. Yet "wires" which professed to indicate a Government transaction of unprecedented magnitude—those who sent the cables attempted no concealment—were innocently let through to paralyse the corn trade for 48 hours, ample time, probably, for the senders to effect their purpose. The wheat reserve will, as we have said, be a step towards the great desideratum of stability in the wheat trade. We are permitted to state that the Government is already in communication with the recognised magnates of the Baltic and of Mark Lane. If Lord Selborne and Mr. Runciman are guided and guarded by those authorities as to what to buy and how to buy, the public may rest assured that the national purse will be fully and honourably protected. The Cabinet itself must decide what proportion to the national wants from season to season should be acquired; we can only place on record the market opinion that while the thing should be done—and ought to have been done earlier—it should not now be overdone. To lay down corn in store is not like laying down a vintage which will only improve by keeping. Moreover, an oppressive weight of reserves always discourages sowings for the following season.

Happily, the Boards of Agriculture and Trade are in exceedingly competent hands, and we may feel confident that all due points of this and kindred character will be borne in mind.

Insurance Notes.

NORWICH UNION MUTUAL LIFE OFFICE.

This attractive life Office has for many years regularly reported the largest new business amongst British contemporary institutions of its class not possessing an industrial organisation. The business extends to many foreign countries, but the Society takes the lead also in new business effected within the United Kingdom, and a proof of the high esteem in which it is held in our own country is shown by the fact that it is one of very few offices that were able to report an increase in home business in 1914. It may be taken that but for the outbreak of the War the increase would have been greater; but it is really remarkable that there was any increase at all, considering the adverse influences prevailing during the closing months of last year.

The total new life business reported for 1914 in sums assured was £4,968,859, of which £325,334 was reassured, the net amount retained at the Society's sole risk being £4,643,525, of which £2,857,193 was effected within the United Kingdom, as compared with £2,794,738 in 1913. The total net life premium income, amounting to £1,532,330, shows an increase of £85,437. The expenses of management, inclusive of commission, charged to the life assurance account absorbed about 14½% of the relative premium income, which is a very moderate ratio considering the large proportion of new premiums, necessarily bearing

considerable initial charges. The mortality experience was favourable. Claims by death involved payments of £570,773, which amount is reported to be less by £74,196 than the sum expected according to the tables employed in the mortality investigation. In addition, claims under endowment assurances maturing by survivance amounted to £160,820. Through the year's operations the life assurance fund was increased by £865,870 to £10,826,755.

The annuity account for 1914 shows that a sum of £67,385 was received as consideration for new annuities granted, that annuities for £123,787 were paid, and that the annuity fund at the close of the year amounted to £1,020,458. The premiums in connection with capital redemption policies amounted to £116,452, and the relative fund at the close of the year to £1,039,549.

Apart from the additional figures relating to the acquired Scottish Imperial Company (premiums, £32,179; life assurance fund, £669,897; assets £679,021), the assets shown in the Norwich Union life balance sheet on December 31, 1914, amounted to £13,014,318. The gross interest yield on the average amount of the funds during the year was £4 7*s.* 6*d.* per cent., and the net yield, after deduction of income tax, was £4 2*s.* per cent. This indicates a very large profit from the investment of the funds, for the rate of interest at which it is actuarially assumed that the funds will accumulate is only 2½%.

The Society is widely known as one of the best bonus producers. At the last quinquennial valuation the bonuses on the current series of participating policies, comprising those issued since June 30, 1896, were at rates varying from 36*s.* to 68*s.* per cent. per annum, according to age at entry and duration of policies. The next quinquennial valuation falls to be made on June 30, 1916.

Some interesting particulars in regard to the Society's experience and financial position were given by the Chairman in his address at the annual meeting on May 26. From this it appears that the Society's foreign operations had never been extended to either Germany or Austria, and that its interest in enemy countries was limited to an ordinary agency in Constantinople. In France and Belgium the policies issued did not cover war risk. Looking to the Continental principle of compulsory military service, the policy conditions had been framed with special care, and, in cases where the Society assured the risk referred to substantial extra premiums were charged. Reassuring information was given by the Chairman as regards the investment position. The amount of depreciation in assets, comparing book prices with estimated market values, was reported by him as less than 2½% of the whole amount. At the last quinquennial valuation the appropriation of a larger proportion to depreciation did not prevent the maintenance of the Society's high bonus standard, so that no great anxiety need at present be felt as regards the outcome of the investigation next year.

BRITISH EQUITABLE ASSURANCE CO., LTD.

The subscribed capital in this Company amounts to £300,000, of which £34,500 is paid up in shares of £10 with £1 3*s.* paid. The annual dividend to shareholders during the current quinquennium, ending January 31, 1919, has been fixed at 3*s.* per share.

Perhaps the most satisfactory feature of the accounts for the last financial year, which ended on January 31, 1915, is the apparently successful and profitable development of the Company's fire, accident and general department, which was opened in 1905. Premiums in this account, amounting to £27,401 after deduction of reassurances, showed an increase of £8,136 (the increase in gross premiums is greater). As against this the outgo for claims, expenses and costs of all kinds was £20,138. It is normally supposed, presuming the incidence of premiums to be fairly distributed over the year, that 40% of the increase in premiums covers the addition required to provide for unexpired risks, and if this rule were applicable here the profit in the last financial year from the Company's fire trading would appear to have been £4,009, which in itself, had it been used for such a purpose, would nearly have covered the dividend to shareholders. But a sum of only £1,016 has been actually transferred from this account to profit and loss. Thereafter the fire, accident and general funds on January 31, 1915, amounted to £45,212, representing about 165% of the fire, accident and general premium income, which discloses an exceptionally strong departmental position.

The situation as regards the more important life department seems to be less satisfactory. The net new life business reported for the year ended January 31, 1915, is £162,532, as compared with £217,132 in the previous year. A decrease was to be expected in consequence of the War, but even had none been shown the return would have been meagre in comparison with the outlay apparently involved. We have never been able to understand the exceptionally heavy ratio of expenses shown in the accounts relating to this Company's life business. The total net life premiums, amounting to £108,266, showed a decrease of £3,225, yet expenses of management and commission absorbed 22.6% of the premiums. The premium income has diminished for several years in succession. The expense ratio, although slightly lower than in the previous year, is a very high one for a declining business. It practically uses up the whole margin of premiums reserved at the valuation, so that there is no profit at all from economy. The bonus history of the Company has not been satisfactory to policyholders in the past, and, as we have repeatedly urged, a drastic reduction in expenses seems called for in their interests. Claims by death amounted to £92,041. The incidence of mortality appears to have been favourable, for although these claims included payments of £5,746 occasioned by war fatalities, the total amount is stated to have been only 90% of that expected under the valuation tables employed. Policies for £80,838 matured by survivance. Through the year's operations the life assurance fund was reduced by £46,197 to £1,559,544. The net interest yield on the life fund, after deduction of income tax, is reported to have been £3 17*s.* per cent. The rate of interest assumed for the accumulations is 3%, so that there seems to have been a fair average profit from this source.

The small section relating to employers' liability and domestic service insurance shows premiums of £2,849, and a relative fund at the close of the year amounting to £1,738, exclusive of provision for outstanding claims. The balance standing to the credit of profit and loss account at the close of the financial year was £7,741.

The total assets as shown in the balance sheet on January 31, 1915, amounted to £1,705,987. Nearly 70% of the investments take the form of freehold and leasehold ground-rents, mainly in the Metropolitan area, the freehold ground-rents standing in the books at 23¾ years' purchase. The Stock Exchange securities and other assets were taken at the market values, less accrued interest and dividends, as at January 31, 1914, the close of the last quinquennium, in cases where they had been held at that date, subsequent purchases being taken at cost price, less accrued interest.

"English Railways: Their Development and Their Relation to the State." By E. Cleveland-Stevens. Price 6*s.* (London: Geo. Routledge.) This is a detailed historical account of the consolidation of English railways up to the year 1900. Two maps are given, showing the railways existing in 1848 and at the present time.

RUBBER SHARE VALUES.

INVESTORS interested in rubber shares as permanent investments, and not as mere gambling counters, will have welcomed the steadying of the price of rubber in the region of 3*s.* per pound during the past week in place of the previous week's too rapid upward movement in values. Of course it has meant the elimination of a good deal of speculation in the share market, but from the point of view of the genuine investor this is no drawback, as it enables investment purchases to be made at more reasonable prices than is possible in a speculatively active market. Steady investment buying on individual merits, is much preferable to speculative inflation on account of a temporary jump in the price of the commodity, and there is no doubt that during the past few weeks investors on the lookout for securities of real merit in which to place a portion of their surplus funds have been turning their attention to the rubber section. It is becoming increasingly recognised that, apart altogether from a possible rise in capital values engendered by anticipation of the effect of an advance in the price of rubber, the shares of high-class rubber plantations offer considerable attractions to the keen investor, inasmuch as, though they are no more speculative than any ordinary industrial venture, rubber shares can be bought to give the purchaser a high

* Estimated. † Interplanted with coffee. ‡ About half the acreage is in bearing. § Holds 132,023 Chevilot shares
Figures in parentheses ( ) denote months of output of current year. (a) Including estate purchased September 1915, being financed by Company's Debenture.
(b) Excluding 20,944 shares under option at par. (c) Includes £1,409 profit from tin.

return on his money with considerable chances of capital appreciation as the planted areas approach maturity and costs of production are reduced.

At the present time most of the share values are based upon a price of rubber very considerably less than the existing quotation of over 3*s.* per pound, so that share prices are not inflated. Of course some shares are more fully valued than others, for naturally an estate in full bearing, or nearing maturity, commands a higher price than an estate in a less forward stage of production. Therefore it is preferable to purchase the shares of a relatively young—though not too young—rubber estate, showing progressive increase of output, rather than the shares of a fully, or nearly fully, matured plantation with a practically stationary output.

It should be borne in mind that an average rubber estate at full maturity will yield about 350 lb. per planted acre, and the nearer an estate approaches this figure the nearer it is to full maturity. The finest estates will produce 400 lb. per planted acre, or even more, but 350 lb. is a conservative average allowance. In purchasing a rubber share, then, one point to note is the present rubber yield per planted acre in comparison with 350, at the same time taking into account the proportion of the planted estate that is still immature, or, say, less than five years old. With this comparison in mind, turn to the market capitalisation per planted acre, which is the principal index of share valuation. We showed last week that on the basis of a full maturity yield of 350 lb. per planted acre and 1*s.* per lb. profit—*i.e.*, conservatively taking rubber at 2*s.* per lb. and "all-in" costs at 1*s.* per lb.—the maximum intrinsic value of a rubber estate at full maturity, to give the investor a 10% yield, would be £175 per planted acre. But to

allow for contingencies it is better to adopt a figure of £150 as the standard, and, as a general rule, it may be said that the relative merits of rubber shares can be roughly judged by the degree of proximity of their market capitalisations per planted acre to this figure of £150. Care should be taken, however, to see that "all-in" costs are low, *i.e.*, as near as possible to or under 1*s.* per lb., and it should also be noted whether the portion of the estate in bearing is giving a good yield of rubber or not. For instance, Batu Caves shares at their present price of £12 represent a market capitalisation per planted acre as high as £190, but as on the basis of last year's and this year's dividends the yield to the investor is 12½%, the shares are obviously not over-valued. The explanation is as follows:—

(1) The yield per planted acre at full maturity will probably be over 400 lb., as with about 30% of the planted acreage under five years old the yield has already reached over 330 lb. per planted acre.

(2) The "all-in" cost in 1914 was under 1*s.* per lb., viz., 10½*d.* per lb.

(3) The price obtained for rubber in 1914 averaged 2*s.* 2½*d.* per lb.

These reasons explain why Batu Caves market capitalisation of £190 per planted acre, though much higher than the adopted standard of £150, is not unreasonable, and the same remarks apply to Pataling and one or two other shares.

In the accompanying cross-page table we give the vital information necessary to the appraising of about 140 different rubber shares. We have set the three most important columns in conspicuous type. The reader, casting his eyes from left to right, will see what portion of the planted area has reached, or is about to reach, the tapping stage, what portion has still to come into production, and the total planted area. He will then observe the market capitalisation per planted acre, which he must consider in relation to the rubber production, the output per planted acre, and the "all-in" costs shown in the succeeding columns. Also, he will note the profit earned in the last financial year and the dividends paid, indicating the margin between the distribution to shareholders and the profit earned. As regards the very important factor of liquid resources, it is satisfactory to be able to say that the balance sheets of most of the companies given below disclose quite healthy financial positions, profits in the majority of cases having been conservatively distributed. We venture to think a study of the table will open the eyes of many rubber shareholders to the value of their investments in comparison with others offering at present market prices, and will give a good idea of the number of shares that offer distinct attractions to the investor willing to take a comparatively low yield on his money now, with the almost certain prospect of a higher return later on, and the natural corollary of appreciation in capital value.

JOHN I. THORNYCROFT AND CO., LTD.

COMMENTING on the results of this well-known Company for 1914 in May last, we pointed out that it was receiving great benefit from the large demands occasioned by the War. The statement receives ample justification in the accounts that have been issued this week covering the period from January 1 to July 11, 1915, the period thus being nearly 6½ months. For this period a trading profit of £267,333 is shown, which compares with £151,497 for the whole of 1914, the expansion that has occurred being evidently very great. The directors of the Company have shown themselves fully alive to the importance of keeping the works modern, and of the desirability of making sufficient extensions so as to cope with a steadily growing business, and during recent years a considerable capital expenditure has been made for this purpose. The Company has two works, one at Southampton and the other at Basingstoke, and in both places expenditure has been incurred so as to cope with an increasing output. Indeed, since 1906 the Company has expended such sums as to raise the assets from £699,804 to £1,139,874 without either increasing its share or loan capital, that is to say, the expenditure on the business has amounted to £440,070, as may be seen from the following comparison of the liabilities and assets at the dates named:—

LIABILITIES.

	1,139,874	699,804	+440,070

The benefit of this large expenditure is now being reaped.

It may perhaps be desirable to add that the reason for presenting the accounts covering a broken period of 6½ months is that the business was placed under the control of the Ministry of Munitions as from July 12 last, and, accordingly, it was deemed desirable to present accounts to July 11. For 1914 the allowance for depreciation, including a sum written off for special depreciation, was £29,241. For the six months of 1915 the amount set aside is £21,830. Moreover, the capital expenditure incurred during this period has also been charged to profit and loss account, the reason being that the expenditure has been made with a view to increasing the output during the War, and the value of it at the termination of the War "is more than problematical." Practically the whole of the resources of the Company have been employed upon war work, and the total turnover of the business has been about four times the normal average. It is not surprising, therefore, that such a substantial increase has occurred in the profits. After providing for the Preference dividend there is a balance of £231,729, as compared with £95,760 for 1914, a sum which is large enough to provide for a distribution (actual) of over 300%. The amount distributed is £14,850, representing an actual dividend of 10%, or at the approximate rate of 18½ per annum, and of the balance a sum of £49,000 is set aside for the purpose of writing down the goodwill account, reducing the item to £1,000, £10,000 is transferred to the special reserve account, bringing it up to £50,000, while £90,000 is carried to the Ordinary reserve, bringing it up to £100,000. There then remains a balance of £67,879, which is added to the carry-forward, bringing it up to £78,148.

The comparison of the profits since 1910 is as follows:—

Year ended Dec. 31—	1915†	1914	1913	1912	1911	1910

* For 2½ years. † Period ended July 11, 1915.
‡ Actual: at the rate of 18½% per annum approximately.

It is pointed out that no special provision has been made in the accounts for income-tax or excess profits tax, as in the present position of the law it is impossible to arrive at any reliable estimate of this liability.

The market was rather inclined to look for a larger distribution of profits, but it will be generally agreed that the conservative distribution of profits is distinctly wise. Thereby the Company has placed itself in a very strong position, and has eliminated possible weak points. At January 1, 1914, the goodwill, &c., stood at £86,672; this has now been written down to £1,000. The reserve and carry-forward combined amount to £228,148, an item which is very little short of both Debenture issues totalling £260,000. It will be noted that the Company has accumulated a sum of £30,557, representing premiums paid on Debenture redemption policies, by means of which the whole of the £260,000 of Debentures at present in issue will eventually be redeemed. Herewith we summarise the liabilities and assets as at July 11 last:—

LIABILITIES.	£	ASSETS.	£
Issued share capital ...	[illegible]	[illegible]	164,110
5% 1st Mort. Debs. ...	160,000	[illegible]	262,562

	1,139,874		1,139,874

Presumably as the Company is now a controlled institution, no information is given as to the amount of work on hand, but it is, of course, absolutely certain that the Company is not only extremely busy at the present time, but that it has ample work in hand to keep it busily employed for some time to come. It is also certain that, at any rate as long as war lasts, both works—at Southampton and at Basingstoke—will continue to be employed to their fullest extent, and the outlook, therefore, is for a continuance of the substantial profits reported for the first half of 1915. Moreover, by reason of the conservative distribution policy, and of keeping in hand such substantial sums, the Company is laying the foundation for continuance of prosperity after the War is brought to an end, and the abnormal Government requirements now being satisfied will no longer be forthcoming. The directors and the management are certainly to be congratulated on the excellent results now shown, and the shareholders also are to be envied for the substantial dividend they are receiving, and likewise on the probability of equally large dividends in the future.

The yields afforded by the securities are as follows:—

* Approximate.

SUNBEAM MOTOR CAR COMPANY.

The twelve months to August 31, 1915, have proved a very prosperous period for this well-known motor-car company, the net trading profit amounting to £277,223, as compared with £102,300. Since March last the entire energies of the Company have been used on behalf of the War Office, the Admiralty, and the Allied Governments. It has supplied a very large quantity of motor-cars and ambulances to the War Office and large numbers of aviation engines to the Admiralty. Moreover, at the further request of the Admiralty, the Company has taken up the manufacture of waterplanes. As the joint manager pointed out at the meeting, this new industry of the Sunbeam Company had not only been extended beyond all expectations, but had represented a far bigger business than had ever been done in motor-cars. "Even should there be a big slump in the motor-car trade, the Company could still easily maintain its rate of profit on aviation engines alone. Moreover, they had a third string to their bow in the building of complete flying-machines. The first complete waterplane had been delivered and had made a successful flight. The Company had in hand from the Admiralty orders for complete machines worth thousands of pounds, and this in itself would prove a very remunerative adjunct." The result of the improvement in profits during the year is that the dividend on the Ordinary shares is increased from 15% to 25%, and a sum of no less than £120,000, equivalent to a dividend of 50% on the Ordinary capital, is carried to the reserve fund, bringing it up to £220,000, while the carry-forward is increased by £55,556 to £75,667.

The profits for the past six years and the manner of distributing them may be seen from the following statement:—

* Directors' fees deducted.

The Company is now a controlled establishment, and, consequently, the question of excess profits has to be met. By keeping in hand so substantial a proportion of the profits, the Company is well placed to meet any demand that may be made upon it in this direction. There is no doubt, of course, that it will continue to be very busily employed, and the outlook is, consequently, very bright. The £1 Ordinary share is now quoted at 46*s.*, and on the basis of the 25% dividend paid last year the yield afforded is practically 12½%. As already pointed out, last year the Company earned no less than 100% on its Ordinary capital, and, consequently, it may be anticipated that future distributions will be on a large scale.

Commercial.

LANCASHIRE COTTON INDUSTRY.

DURING the past fortnight a rather marked rise has occurred in the price of raw cotton, the advance amounting to about a halfpenny a pound in American qualities. Yarn and cloth quotations have been put up to a corresponding extent, and the higher rates have checked business, especially in piece-goods. The stronger tone in raw-cotton circles has been chiefly due to the abnormal conditions which prevail in the Liverpool market. Importers are meeting with very limited offerings on the part of growers in the States, and there has been competition for the available supplies in Liverpool, which to a large extent are already sold against contracts. American freight charges tend to increase and shipping is scarce. The position of affairs may be described as rather artificial, but there are few indications at the moment of any definite relief, and the general feeling is more "bullish" than a little time ago. The disorganisation of railway traffic throughout Lancashire is very pronounced. Spinners complain of delay in getting raw cotton from Liverpool, and facilities for sending yarn from the spinning mills to the weaving sheds are very restricted. Then piece-goods cannot be moved freely from the ports as vessels are in limited supply. The shortage of labour as a result of the recruiting for the Army is largely responsible for the harassing conditions, and traders at the moment are encountering more difficulties than at any time since the beginning of the War.

Towards the end of last week there was a slight improvement in the demand in cloth for certain outlets, but the higher prices which have since ruled have blocked progress. Some special contracts have been arranged in sheetings and shirtings for China, but general buying does not seem to be any nearer. The advance in silver is a favourable feature. Our customers in India continue to resist the prices ruling on this side, and seem determined to do without replacements rather than operate at the moment at current rates. In the meantime stocks in the bazaars are gradually being reduced, and the recent appreciation in values should assist clearances. Of the minor outlets, South America continues to do fairly well and business has been offering at a price for Egypt. During the last few weeks exports to certain Near Eastern outlets have been entirely stopped. The shortage of dyestuffs continues to hamper business in printing and finishing cloths. Some local home-trade houses are now engaged in stocktaking and fewer orders are being placed with manufacturers, but there is not much to complain about with regard to the way in which deliveries are being taken against old contracts.

All kinds of yarn are distinctly dearer than a fortnight ago. American spinners are in a position to put up their quotations and remain firm thereat. A large business has recently been done, and it is quite evident users have bought in excess of their immediate requirements. The fear has been general of scarcity of certain kinds of yarn, and speculative purchasing has undoubtedly occurred. The finer numbers in wefts are in short supply, and cases have been mentioned this week of fancy prices being paid for prompt delivery. American spinners as a body are enjoying a much healthier margin of profit than a month or two ago, in spite of the increased cost of production as a result of a smaller amount of machinery running. Doublers are very busy and making a lot of money. Trade in bundles for India has tapered off somewhat, the bids being unworkable. A fair amount of buying, however, has continued to take place for the Continent, especially France. Two-fold descriptions are deeply under contract. Further improvement has shown itself in Egyptian yarns, and although stocks can be found in some quarters, these are not so formidable as a little time ago, and this section as a whole is gradually getting into a more profitable condition.

COTTON SPINNING IN 1915. UNPROFITABLE YEAR.

Mr. Frederick W. Tattersall, of Manchester, has prepared an analysis of the stocktaking results of Lancashire cotton spinning companies for the twelve months ending November 30, 1915. Particulars are given of 66 companies, whose total paid-up share capital amounts to £2,326,969, and loan capital is £906,185. At the beginning of the year spinners were very adversely affected by the War, but some producers of coarse yarns were doing well, owing to the active demand in heavy cloths to meet the requirements of the Government. The March stocktakings were therefore irregular, and, on the whole, disappointing. There was some improvement at the end of June, and most concerns were in a position to report small profits at the end of September. Recently the margin of profit for spinners has much improved as a result of the shortage of labour and the lessened supplies of twist and weft upon the market. The American section, on the whole, has done better than the Egyptian spinning department. The total profit for the twelve months of the 66 companies, after paying interest on loans and allowing for depreciation, only amounts to £5,509. This works out at an average profit per company of £89, as compared with £57 in 1914. The percentage of profit on share capital is therefore less than 1%, and, although many companies have paid dividends out of reserve funds, the trading for the year may be described as unremunerative. The total value of plant, including machinery of these mills, is £2,698,958, and the spindles total 5,701,823. The prospects in the market are more encouraging that at any time since the beginning of the War, and the strong position in which many spinners are now situated should result in improved stocktaking reports during the next few months.

OIL AND COAL.

IMMEDIATELY prior to the outbreak of war, the Scottish shale oil industry was in a state of depression. More than one influence caused the depression; but the most important was the keen competition introduced by United States oil producers, and a consequent lowering of prices. The Scottish products were undersold to such an extent that in some cases the abandonment of production was seriously contemplated. The outbreak of war, however, brought about a change in affairs. The Navy made increased demands on the crude products—the best fuel for oil-stoked ships—and higher freights were followed by increased prices.

The result is that the Scottish shale industry is now active. The demand for every product is almost overwhelming, and though the cost of production is increased the ratio of profit is higher. Oils, for example, are 2*d.* to 3*d.* per gallon higher than they were even last year. The price of wax has increased by £7 per ton, and ammonia costs £5 more per ton. In view of these increases in price it is of interest to add that Scotland produces annually about:—

Burning oils...	**20,000,000 gallons**
Naphtha	**5,000,000 „**
Gas and lubricating oils	**25,000 000 „**
Paraffin wax	**25,000 tons**
Sulphate of ammonia	**54,000 „**

There are other less important products from shale, but all are in demand and commanding higher prices. Sufficient statistics have been given to indicate an increase in the selling prices of the total production of, roughly, £1,000,000, of which about half may be regarded as additional profit. The estimate is probably below the mark, but it serves to show that shareholders need not contemplate another year of depressing accounts.

In the Scottish coal trade business is hampered. There continues diminution of transport facilities. In some places miners may not work a full shift owing to the congestion of supplies awaiting waggons at the pit head. The shortage of empty waggons is due as much to a shortage of railway labour as to the importance of other traffic, and, with the best will in the world, the railway companies cannot do more for coalowners than they are doing now. The shortage of waggons, unfortunately, arises at a time when there is really a heavy demand for coal. Exporters, as well as home traders, have a good supply of orders on hand; but they cannot get delivery for the reason mentioned. There is little hope that better railway transport will be available before the end of the year. Shipping tonnage is also scarce, but there is sufficient available to deal with the coal supplies on hand. Indeed, more coal could be dealt with were it forthcoming. Freights are making new records daily. For example, the freight per ton to Genoa before the War was 7*s.* 6*d.*; it is now 60*s.* If carriage costs to Milan, for instance, are added, as well as the demurrage at the congested Genoese docks, and higher landing charges, the customer in Milan must pay at least £5 per ton for his Scottish coal. People in these islands are not so badly off after all.

Prices have been advancing for all classes of fuel within the limits of the Coal Prices Limitation Act. Double these prices could easily be obtained in many cases where the demand is very urgent. The situation generally is, therefore, summed up in the words, "great shortage of coal."

New Issues.

PORT ST. MARY FISHING AND CURING COMPANY, LIMITED.

THIS Company has made an issue this week at par of 25,000 7½% Participating Preference shares of £1 each. The Company is formed with a capital of £50,000, divided into 49,000 Preference shares of £1 each and 20,000 Deferred shares of 1*s.* each, the former being entitled to a 7½% dividend and one-half surplus profits, after carrying to reserve 5% of the balance and such further sums as the board may from time to time determine, the Deferred shares being entitled to the balance. The Company is formed to establish a fishing business at Port St. Mary, Isle of Man, and it is considered that the present forms a satisfactory opportunity for carrying on such a business. It will be recognised that the industry is a speculative one, and doubtless applicants for shares have considered the risk run.

BAHIA BLANCA AND N. W. RAILWAY.

AFTER the disappointing showing made by the Bahia Blanca and North-Western Railway Company in 1913-14, a marked recovery occurred last year. Three years ago the traffic receipts of the line touched the maximum figure of £836,036. In 1913-14 they dropped to £542,780, notwithstanding an addition of 50 miles to the system operated, and last year, with the same mileage open, they rose to £755,753, an increase compared with the preceding year of £212,973, or nearly 40%, and a decrease compared with the maximum of £80,283 only. Passenger earnings were £6,681 better than in 1913-14, but the principal increases occurred in wheat, barley, and oats. The quantity of wheat carried amounted to 842,135 tonnes against 383,776 tonnes, and the receipts therefrom advanced from £105,614 to £245,334. Barley, oats, &c., amounted to 276,691 tonnes against 155,278 tonnes, and produced in revenue £42,579, as compared with £19,358. The total goods and live stock carried amounted to £492,244, an increase of £156,568, or 46.6%. It is interesting to note that Bahia Blanca now holds first place among the ports of the Argentine Republic in the matter of exports of wheat and oats. This will be seen from the table appended, showing the export of these cereals from the various ports between January 1 and September 23 last:—

Port.	Wheat Tonnes	Oats Tonnes
Bahia Blanca	905,628	407,381
Buenos Ayres	521,884	87,027
La Plata	156,345	14,620
Rosario	698,642	1,330
Santa Fe	106,897	
Other ports	5,419	..
	2,392,815	510,358

These figures compare with exports of 928,600 tonnes of wheat and 344,439 of oats in the previous year. The following is a comparison of the traffic receipts of the line since 1905-6:—

Year	Miles Open	Amount £	Year	Miles Open	Amount £
1914–15	874	755,753	1909–10	701	588,255
1913–14	874	542,780	1908–09	665	621,074
1912–13	824	836,036	1907–08	638	494,360
1911–12	782	692,125	1906–07	439	269,789
1910–11	722	520,823	1905–06	239	166,400

The line is worked by the Buenos Ayres and Pacific, which guarantees interest upon the Company's Debenture stock and certain specified dividends on the Ordinary capital, so that the stockholders are not directly affected by the good or bad results of the year's working. Nevertheless, the figures are interesting in the bearing they have upon the position of the Buenos Ayres and Pacific Company. Moreover, the prospects of the division, the General Manager states, are hopeful, and better results should be secured in the current year. The price of the guaranteed stock, which is at present in receipt of 4% dividends, and which in and after the year 1917 will be receiving 4½% distributions, is now 68½, and the yield afforded is 6⅝%. The £2,000,000 5% Guaranteed shares of £10 each, which carry interest at the rate of 5% per annum until March 31, 1916, will, after that date, be converted into 4½% Guaranteed stock, in accordance with the terms of the issue. The price is about 6½, and on a 4½% dividend basis the yield afforded is about £6⅞ per cent.

MEETINGS
OF PUBLIC COMPANIES.

ARAMAYO FRANCKE MINES, LIMITED.

THE tenth ordinary general meeting of this Company was held at the registered office of the Company, 148½ Fenchurch Street, E.C., on December 2, 1915, Mr. F. Avelino Aramayo (the Chairman) presiding.

The Secretary (Mr. L. A. Kensington) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, the report and accounts having been circulated in due course among all the shareholders, I suppose we may take it for granted that you will consider them as read.

In rising to move the adoption of the report and accounts, it is not pleasant to have to review the results of a year overloaded with adverse circumstances, as I had occasion to point out when I last had the pleasure of addressing you.

The Effect of the War.

Our revenue account, as you will have noticed, shows a net profit of £3,504 3*s.* 2*d.* in Bolivia, before deducting charges in England, as against £135,764 17*s.* 9*d.* for the previous year ended May 31, 1914, after the usual careful valuation of stocks and plant. You will remember, however, that the sales of the previous year were enhanced by an unusual accumulation of minerals, while in the year under review we have had to contend with a partial suspension of the mines, during a period of six months, with a considerable reduction of the sales, and with a still worse factor—the prevalence of the lowest price of tin known since our existence as a Company. In addition to this, the cost price of our tin concentrates has been considerably increased by the unavoidable maintenance of preparatory work and general expenses distributed over a small output, by the high rates of sea freight and marine insurance, and by the excessive returning charges for smelting which prevail on account of the War, besides a fall in exchange, which has unfavourably affected our valuation of stocks. The result is that our total sales of black tin amounted to 2,314.16 tons, or £139,319 3*s.*, as against 4,218.16 tons, or £352,048 16*s.* 6*d.*, the year before, the difference of price realised per ton having been, on an average, £23 4*s.* 5*d.* against the year under review.

Production Results.

There were no sales of wolfram, the small output being carried over as stock. The sales of copper matte amounted to 111.5 tons, or £5,167 11*s.* 3*d.*, and the average price per ton obtained was £8 2*s.* 10*d.* less than in the previous year. The sales of bismuth were reduced by 64.07 tons on account of the lock-up of our stocks in Germany, while new refining works were established in England, but the price obtained was 11*d.* better per pound on an average. The total production of black tin amounted to 2,060.3 tons, or 1,382 tons less than in the previous year. The amount of tin ore treated was 35,774 tons, of an average yield of 5.6%, on account of the greater treatment of tailings, as against 43,366 tons, with a yield of 8%, in 1913-14. The production of wolfram was 36 tons, or 15.4 tons more, and the production of crude bismuth 73.76 tons more than in 1913-14. Only a small quantity of silver ore was obtained during development work in Chocaya. The production of copper matte amounted to 39 tons of metallic copper, or 116 tons less than in the previous year.

The Prospects.

Now, referring to the work done during the first five months of the present financial year—namely, from June to October inclusive—and to future prospects, I can only say that we have not been greatly encouraged by the price of tin and by the general conditions of the market. The returning charges for smelting have increased from £9 or £10, at which they were in normal times, to £20 and even £25 per ton of mineral. We have at present in England and afloat an accumulated stock of black tin of not less than 1,181 tons. It is only within the last few weeks that an improvement in the market for tin has been noticed, and the price has gone up about £20 per ton.

Production again Almost Normal.

Notwithstanding these adverse circumstances, we have kept the mines in active work by means of our own workmen, without recurring to tributers as before. The production has become again almost normal, and a good deal of development work has been carried on, especially in our tin and silver mines of Chocaya, where we have opened out an important field of extraction of both metals for several years to come. The lixiviation plant of Asllani in Chocaya, which I mentioned last year, is now approaching completion, and this will enable us to deal satisfactorily with the complex ores of tin and silver found here, which are almost a novelty in nature; at all events, in such conditions of abundance and richness. The tin concentration plant has, at the same time, been improved and extended, so that we may confidently expect good results from this quarter to begin shortly. Of course, the production of this section having been very small during preparatory work, it stands to reason that it has weighed heavily upon the revenue account of the year. In Chorolque we have also made additions and improvements to the general plant, and completed the installation of electric rock-drills, which will facilitate and hasten the investigation work in depth of that big mountain. In Tasna we have made additions to the driving power and improvements in the sintering and smelting plant. We have completed the tin and wolfram concentration plant, and we are approaching completion of the bismuth-fume condensation system, which has already given good results at Quechisla.

Sound Financial Position.

Our financial position is a sound one, notwithstanding the lock-up of a considerable amount of money and mineral stocks beyond our reach, to which I alluded last year, and against which may be placed our reserve account, amounting now to £40,000. As stated, we have in hand most of the stock of black tin produced during the financial year, which we may now expect to realise at a good profit over our valuation, which is at cost price; and, besides, we are having the advantage of disposing of other metals, such as bismuth and wolfram, more freely and at better prices. It is worth considering that, without taking into account the value of buildings, machinery, stores, and merchandise, our stock of minerals at cost alone represents nearly half the capital of the Company.

Dividends Paid.

As stated in the report, three dividends of 6*d.* per share, amounting to £44,781 15*s.*, have been distributed, and £20,000 of Debentures have been redeemed. We have since declared two further interim dividends of 6*d.* per share, amounting to £29,854 10*s.*, and redeemed £10,000 more Debentures on July 1 last. Now, in view of the general situation of the Company, we have every hope that, after providing for the redemption of the remaining £10,000 of Debentures on July 1 next, and for the excessive war income tax, we will be able to continue declaring interim dividends as hitherto. It is perhaps worth pointing out that our dividends, being free of income tax, represent to-day 17½% more than their actual value as compared with general incomes.

Tribute to Staff.

Before finishing, allow me to fulfil an act of justice by stating that during the trying time we have had to go through we have been most loyally and efficiently supported by our General Manager, Mr. Roberts, and by our staff in Bolivia, who deserve all our confidence and thanks. It gives me much pleasure to conclude my remarks by formally moving: "That the report and accounts be adopted, that the interim dividends already paid, amounting to 7½% on the capital for the year, be confirmed, and that the balance of £9,138 12*s.* 7*d.* be carried forward to the next year's account." If any shareholders should desire any further information I shall be pleased to afford it after the motion has been seconded.

Mr. John D. Campbell seconded the resolution.

Shareholders' Views and Questions.

Mr. James Hayes said that, considering the extraordinarily strong position of the Company as disclosed in the accounts, he was prompted to suggest that a bonus should be given to the shareholders out of the reserves. He pointed out that they had reduced the cost account by 56%, the original cost having been £390,000, and that they had with reserve, investments, and cash about £59,000 on which income tax had already been paid. Of course, he would leave his suggestion to the discretion of the capable directors of the Company, but, considering that the heavy reserves and the writing down of cost account had been provided out of the profits of the prosperous times experienced during the previous two years, he thought that in this dark year the shareholders should be considered before placing to reserves such excessive amounts. When he said "excessive" amounts, he did not mean to impute any blame to the directors, because they were taken out of the profits of prosperous times, and were very properly and soundly devoted to reserves. Income tax, which was now very heavy, had been paid on these reserves, which earned very handsome profits for the Company in the shape of interest, and on those profits further income tax would have to be paid.

Mr. Reid asked whether the 1,181 tons of black tin in England and afloat had already been sold.

The Chairman's Reply.

The Chairman, in reply, said that it had not been sold. About 800 tons were in London and 300 tons in transit. They did not try to push the sale at the present time. As he had stated in his speech, the returning charges for smelting

were excessive, and they were waiting for a better time—either for higher prices or for more favourable contracts at a lower returning charge. They had been holding back as much as possible; in fact, there was not much demand in the market for black tin, although there was a good demand for bar tin of well known marks. In reply to Mr. Hayes, of course the directors would be very pleased to be able to do what he had suggested. The question of distribution of profits was always very carefully considered by the directors when the accounts were before them. They had a certain amount of money locked up in ore in Germany which they had not been able to bring over. It figured in the accounts at about £50,000, being the cost price. They could not dispose of it, and as they had a reserve of £40,000, they put it against that, so that there was no risk whatever to be run by the shareholders. At the same time under the prevailing circumstances they could not very well set aside more funds for distribution. As already explained, 1,100 tons of black tin had not been sold, and the profit earned last year was insignificant; in fact, it had been wiped out by the payment of income tax and by the loss on exchange. Income tax accounted for about £8,000, and the loss on exchange for about £9,000. Under the circumstances he thought the directors ought to be as prudent as they had been up to the present, and not rush into paying dividends out of sums of money which they had not at their disposal.

The resolution was carried unanimously.

The Chairman next moved the re-election of Mr. J. D. Campbell as a director.

Mr. Rayner seconded the motion, which was unanimously agreed to.

The Chairman also proposed the election of Mr. Roberto German Ribon as a director of the Company in the place of Mr. V. Manuel Michaelis-Braun, who, he said, was residing in an alien country. Mr. Ribon was thoroughly acquainted with the business of the Company, and the directors felt sure that his co-operation would be of great assistance to them. (Applause.)

Mr. Hayes seconded the motion, which was unanimously adopted.

Messrs. Tribe, Clarke, Painter and Company were re-appointed auditors, on the motion of Colonel Suarez, seconded by Mr. Rayner.

Colonel Suarez proposed a vote of thanks to the Chairman, the directors, and the General Manager and staff.

Mr. Rayner seconded the motion, which was unanimously adopted.

The Chairman briefly acknowledged the compliment, and the proceedings terminated.

THE STRAND HOTEL, LIMITED.

THE eighth ordinary general meeting of the holders of Participating Preferred Ordinary and Deferred Ordinary shares of this Company was held on December 1 at the Trocadero Restaurant, Shaftesbury Avenue, W., Sir Joseph Lyons, D.L. (the Chairman), presiding.

The Secretary (Mr. H. F. Joyner) having read the notice and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, and the declaration of the dividends recommended, said: I am very pleased to be able again to occupy the chair at the annual general meeting of the Company. The accounts presented on this occasion, representing the sixth year of trading, are of special interest. In the first place, the whole of the year under review is a war period, whilst last year's figures covered but two months of the War.

Fortunate Position Despite the War.

At the last annual general meeting we could only look forward with uncertainty to the future. Those of you who were present on that occasion may remember that I then sounded a note of warning as to the increasing cost of living and the heavier burdens of taxation which would fall upon us. Those views have been verified, and the most sanguine of us cannot expect that we shall not have to face still greater burdens to ensure a successful issue to this dreadful war. Your directors, therefore—in common, I suppose, with most others in this particular class of business—have had a time of great anxiety. Difficult problems of supplies and labour have demanded the greatest care and attention. Inevitable changes in the latter will have been apparent to those of you who use the Company's hotels, a much larger proportion of women having now been brought into employment. Notwithstanding these difficulties, there is good reason for congratulation that we are in the most fortunate position of being able to record a result which abundantly surpasses anything that we could have anticipated.

Regent Palace Hotel.

The second interesting feature is the fact that the Regent Palace Hotel has been opened during this financial year. The accounts, therefore, cover from the date of that event—namely, May 26 last—the trading of that hotel, and your directors are exceedingly happy to report that the business done has been eminently satisfactory. Most of you probably know that this Regent Palace Hotel has the largest capacity of any in Europe, and the success it has proved to be cannot be wondered at when one takes into account the fact that for the modest sum of 6*s.* 6*d.* one may obtain a bedroom fitted with hot and cold water supply, provision of full table d'hôte breakfast and all attendance, including bath—and no tips—in a building which is literally a palace, as its name implies. I feel that both the shareholders and directors are justified in congratulating themselves upon the unanimous criticisms of the Press and the guests who patronise the establishment that it is absolutely the last word in popular hotels. The policy of the directors in building popular-priced hotels replete with every luxury and comfort, which has been so justified by the results of the Strand Palace Hotel, has been abundantly confirmed by the achievements of this, our second venture. At the moment we are obliged to accommodate a large number of our staff in the main building. When the staff annexe is completed, as we hope it will be in a few months, we shall transfer such staff thereto, and thereby we shall at once have accommodation for a much larger number of visitors in the hotel proper. This annexe is in Sherwood Street, opposite the main building at Piccadilly Circus. Incidentally, whilst speaking of the staff, the shareholders might be interested to know that the employees at this hotel exceed 1,000, and altogether your Company provides employment for over 1,500 people.

Issue of Balance of Preference Shares.

It is mainly to meet expenditure in completing the hotel and part of the annexe that we are issuing the balance of 25,000 of the 100,000 7% Cumulative Preference shares which were created in April last. I may say that this expenditure is in respect of pre-War commitments

Strand Palace Hotel Business Remarkably Good.

We are glad to report that the business at the Strand Palace Hotel, whilst, of course, not up to the pre-War standard, is still remarkably good. This is very gratifying, having regard to the present abnormal times. As to the Baker Street Hotel, for reasons of national policy the Metropolitan Railway Company are proceeding with the erection at a much slower rate than was originally intended (and this meets with the entire concurrence of your directors). I am not able, therefore, to give you any details of the hotel at this early date.

Profit and Loss Account.

Having dealt with the figures on the balance sheet, the Chairman proceeded: With regard to the profit and loss account, the profit for the year is £56,743, showing an increase of £15,757, and as £1,976 more was brought forward

No. 441.

from last year the amount available is £17,733 higher at £66,468. Out of this sum the following provisions have been made: Debenture stock interest, plus interest on stock cancelled, £6,983. This is £2,373 more than last year, due to the new Debenture stock. The next three items are depreciation, £7,000; redemption, £1,470; and reserve, £3,000; the reserve fund now standing at the very substantial figure of £25,500. Then there is to be provided the 7% dividend on the Cumulative Preference shares from the date of opening the Regent Palace Hotel to September 30, amounting to £6,750. In June last interim payments were made on the Participating Preferred Ordinary and Deferred Ordinary shares amounting to £4,550 in each case, and your directors now propose to make the total dividend on the Participating Preferred Ordinary shares up to 9%—that is, to maintain the same rate of dividend this year as has been paid in previous years. This, of course, will be for the whole year on the original shares and from the date of opening the Regent Palace Hotel on the new shares, which takes £7,150 in the one case and £3,156 in the other. After providing a similar sum for distribution on the Deferred shares there is a balance to be carried forward to the next account of £11,552, being £1,827 in excess of the sum brought into account from last year. That concludes the figures, and I think, as I have already said, that we are fairly entitled to congratulate ourselves upon such an excellent result.

The Future.

Whilst it is impossible to make any forecast or to gauge the future with any degree of accuracy, I can only say that since the close of the financial year under review the business has been generally maintained, and the directors look forward hopefully to still greater success when conditions are, happily, normal again, which time we hope may not be far ahead.

Mr. John Balfour seconded the resolution and expressed warm appreciation of the enterprise and energy which the directors had devoted to the welfare of the Company.

The resolution was unanimously adopted, and Mr. I. Gluckstein was re-elected a director.

Messrs. Deloitte, Plender, Griffiths and Company were reappointed auditors, and, a hearty vote of thanks having been passed to the Chairman and directors, the Chairman announced, in connection with the issue of the remaining 25,000 7% Cumulative Preference shares, that the list was closed on the previous day, and that the applications reached such a large total that the board would be unable to allot more than a very small proportion of the number of shares applied for.

The proceedings then terminated.

LONDON NITRATE COMPANY, LIMITED.

THE twenty-eighth annual meeting of the London Nitrate Company, Limited, was held in the Common Hall, Liverpool, on November 30, Mr. Frank Tobin (Chairman of Directors) presiding.

The Chairman said that the changes in the position of the nitrate industry had been almost kaleidoscopic, and the whole history of the year was full of interest. A year ago they had to report to the shareholders that on the outbreak of war there was possibly no industry harder hit than the nitrate industry. A state of absolute paralysis ensued. The selling price of nitrate fell below the cost of production. As a result the Company, taking immediate action, closed their works both at Transito and Puntunchara; the staff was put on half-pay, workmen were dismissed, and the directors had been kept occupied from August until the end of November 1914 in making things safe.

Resumption of Working.

Some months of waiting for a change in affairs ensued, but there were two factors working to bring about an improvement. One was the enormous diminution in production, and while, perhaps, this would not in itself have been sufficient to bring about the improvement, at the same time there sprang up, not all in a moment, but gradually, a very hugely increased demand for nitrate for the manufacture of explosives. These two factors made the outlook about March of the present year more hopeful. The Company took advantage of labour being very abundant to begin extracting caliche, and began to make preparations for the resumption of manufacture. Gradually the demand for explosives reached a point at which they found they could sell at what, under the circumstances, was a very satisfactory profit, and they reopened their oficinas—Transito at the beginning of May and Puntunchara just before the beginning of June, when they were able to get higher prices. The prices for sales had constantly been advancing, and the result had been that their two oficinas had been in full working ever since. The cost of production had been, and still was, moderate, and the selling prices had been good.

Benefit from the Cancellation of Contracts.

Proceeding to deal with the cancellation, upon the outbreak of war, of contracts the Company then had for forward delivery, Mr. Tobin pointed out that enormous difficulty was involved in taking delivery of nitrate at that time—the impossibility of securing freights and all sorts of difficulties. However, the contracts they had with English firms were all honourably carried out in the end, but with the German firms the process appeared to have been extremely simple. They merely sent telegrams cancelling their contracts. The most difficult problem of all had been with the Chilean firms with whom they had contracts. Their sales to the Chilean people had been considerable and at profitable rates, and the amount of nitrate involved was something like 12,000 tons. These firms pleaded *force majeure*. Eventually, having regard to the delay and other inconveniences which would have been caused by recourse to the Chilean law courts, the Company had come to an arrangement whereby they accepted payment of sums totalling £9,625, in consideration of the cancellation of the contracts, and in view of the subsequent advance in prices the Company had benefited largely by this arrangement, by which they bought back at 6*s.* 8*d.* per quintal the whole of the 12,000 tons of nitrate which they had sold at considerably higher prices, or 7*s.* 4¾*d.* And the £9,000 odd thus obtained had been made without exhausting one single quintal of raw material.

The Accounts.

During the last year they had thought proper to again write £7,500 off the value of their works and property—the same amount as they had written off in the previous year for that twelve months' working While this might be liberal, he was perfectly certain it was the only wise course to follow, and they were glad to see that the depreciation, in spite of the fact that the Company's works had only been in operation for less than four months instead of twelve, had been maintained at its former figure. In their last accounts there appeared a sum of £8,700 at the credit of a stoppage of works account, and while they had never contemplated when establishing that fund that they would ever have a year in which both their oficinas would be stopped for eight months, the fund, fortunately, had been large enough to stand even that test and leave them with a balance.

Increased Demand for Iodine.

Alluding to the Company's connection with the Iodine Combination operated in London, he said arrangements had now been made whereby they had a quota for both their oficinas. The War and the enormous increase of hospital work had brought about a very large extension of the consumption of iodine. He did not want any exaggerated figures to get abroad in the matter, but he was hopeful that their iodine profits, instead of being, as in normal years, £1,000 or £1,200, would be something very near £6,000. The demand was very large at present.

A Wise Policy.

He also mentioned that, pursuing a wise policy, the directors were always on the look-out for fresh nitrate grounds to repair their wasting asset, and, in view of the opportunity of acquiring fresh ground on advantageous terms presenting itself, and not being in possession of sufficient funds to meet the purchase price, they had approached their bankers, who had paid them the compliment of promising to provide whatever cash might be required, and to give them until six months after the termination of the War in which to repay it. (Applause.)

"Prospects more than Hopeful"

With regard to the future, as far as one could judge at present the prosperity of the nitrate industry was very considerable, and it certainly promised to continue. They were making larger profits now than they did before the War, they had made forward sales at very profitable prices for a reasonable period of a proportion of their production, and so they felt very comfortable as regarded the future—he would not say for how long, but for a couple of years at any rate. The prospects seemed absolutely hopeful, and even more than hopeful for a time. (Applause.) He concluded by proposing the adoption of the report and statement of accounts.

Mr. Wm. H. Hasler seconded, and the resolution was unanimously approved.

The meeting decided to continue the policy of paying dividends free of income tax, and also passed a resolution to the effect that the directors' fees and Secretary's salary should enjoy similar relief.

Mr. Tobin was unanimously re-elected a director of the Company, and Messrs. Harmood Banner and Sons, the auditors, were reappointed.

COLOMBIAN NORTHERN RAILWAY COMPANY, LTD.

THE seventeenth ordinary general meeting was held on November 30 at 9 Bishopsgate, E.C., Mr. R. Parga (Chairman of the Company) presiding.

The Chairman said: With regard to the report and balance sheet under consideration, I think you will agree that the figures given are such as give cause for congratulation. The disastrous European war, affecting as it does the economic position of the whole world, acts like a crucible through which all English companies must pass. Thus far your Company has stood the test in a manner for which there is every cause for satisfaction.

The gross receipts are practically equal to those of the preceding year, which, as you will remember, proved a record one for the Company. There [illegible] working expenses, due, as you will see from the Managing Director's report, to the effecting of further improvements in the permanent way, and also to the thorough overhauling of the rolling-stock, but the ratio still remains a very low one. In allocating the net revenue you will see that a further sum of £3,000 has been placed to the reserve account, increasing it to £18,000, and there has been written off preliminary expenses £1,274 13*s.* 10*d.* Under the terms of the trust deed we have to commence this year to annually set aside 10% of the net profits to create a Debenture redemption fund, and in accordance therewith the amount of £3,172 7*s.* 9*d.* has been carried to this new account. After making these provisions there is an available balance of £43,514 11*s.* 1*d.*, and out of this the directors recommend that a dividend of 4% be paid on the share capital, leaving a balance to be carried forward of £31,514 11*s.* 1*d.* I would like to add that this Company, as you are aware, is greatly interested in the extension of the railway from Nemocon to Chiquinquira. The Government of Colombia having decided to take over the Colombian Central Railway, the construction of the extension of that line will be undertaken by the Government, and I understand from a reliable source that the Government is very desirous of carrying this out. It is to be feared, however, that during the continuance of the War it may be difficult, if not impossible, to finance the operation, and, as with similar undertakings, it will be necessary to wait until peace has been restored and a more normal Money market is established. The staff in Colombia has continued to give every satisfaction, and deserves the acknowledgment and best thanks of the Company. I now beg to move: "That the directors' report and statement of accounts to June 30, 1915, now submitted, be and the same are hereby received and adopted, and that a dividend of 4%, payable on Wednesday, December 1, be and is hereby declared on the shares of the Company."

Mr. R. A. Vargas seconded the motion, which was carried unanimously.

TANDJONG RUBBER COMPANY, LIMITED.

The eighth annual general meeting of the shareholders was held on December 3 in the Council Room of the Rubber Growers' Association, 38 Eastcheap, E.C., Mr. Charles Arthur Lampard (Chairman of the Company) presiding.

Mr. J. M. Kemp, on behalf of the Secretaries (Messrs. Harrisons and Crosfield, Limited), having read the notice calling the meeting and the auditors' report,

The Chairman said: Gentlemen,—The report has been circulated for some time, and I will ask you to allow me to take it as read. In regard to the balance sheet, our capital remains the same as it was last year—namely, £150,000—and the premiums are £73,684, which is the same as appeared in the last balance sheet.

Capital Position Quite Satisfactory.

The £10,000 appearing to the credit of the reserve shows an increase, and if you agree to our proposed allocation to-day we shall add another £10,000 to that sum, which will make the total amount at the credit of premiums and reserve £93,684, which means £18 6*s.* 3*d.* per planted acre. After providing for depreciation the capital expenditure for the year has amounted to £15,494 15*s.* 5*d.*, and the total expenditure to the date of the balance sheet amounts to £227,166 11*s.* That for 5,116 acres planted, making no allowance for any reserve land, equals £44 8*s.* per acre. That is the amount of cash expended on it. Taking the premium and reserve of £18 6*s.* 3*d.*, it leaves the net book cost at £26 1*s.* 9*d.* per acre, which is the sum you have to keep in mind. (Hear, hear.) In regard to capital position, we have unexpended on capital account £16,518 to meet an estimated expenditure during the current year of £17,379, or an apparent deficit of £861, but we shall recover under depreciation a far larger amount than that, and, in addition, we have our carry forward of £7,294, so that the capital position is quite satisfactory. (Applause.) The 5,116 acres are divided, as you know, into three estates—the Tandjong Kassau of 1,802 acres planted in 1907-8, the Tandjong Merah, consisting of 1,262 acres, also planted in 1907-8, and the Tandjong Doerian of 2,052 acres planted in 1910-14. And then we have the new clearing of 250 acres which will be part of the Tandjong Merah estate. You will find all this set out clearly in the report, and I do not think that any further remarks are necessary from me with regard to them. The new clearings are a part of a programme of 500 to 600 acres, and they were undertaken with the object of keeping the labour employed until a larger area came into production.

Rubber Output and Yield per Acre.

The rubber harvested in the period under review was 800,958 lb., against 545,267 lb. last year. It realised 2*s.* 1.84*d.*, as against 2*s.* 2.73*d.* in the previous year. It cost all-in 1*s.* 2.28*d.*, as against 1*s.* 4.42*d.*, and left a profit this year of 11.56*d.* per lb., as against 10.31*d.* per lb. last year, so that it showed an increased profit. The average area in bearing, or partial bearing, was 2,622 acres, as against 2,169 acres the previous year. The yield per acre was 312 lb., against 251 lb. The whole of this planted area is absolutely clean, and the weeding cost per acre has amounted this year to 10.9*d.*, as against 1*s.* 5.8*d.* All the stumps and roots have been removed from the planted area, and the condition of the estates is excellent, while the trees show healthy and regular growth. The labour force employed was 2,501, and the European staff, including the General Manager and Doctor, amounted to 22. The health all round has been extremely good, and the visiting agent, when reporting on this subject, says: "This Company's properties rank amongst the healthiest on the East Coast of Sumatra." This is borne out by the average death-rate of the labour force being only 10 per thousand. This is due very largely, I think, to the sanitary arrangements, and to the excellent arrangements which have been made for housing our labour force. It is also due, of course, to the medical staff, the splendid up-to-date hospital, and to the general care that has been bestowed on the welfare of the people we employ. (Hear, hear.)

Profits and Dividends.

The total profits for the year amount to £39,716 15*s.* 11*d.*, against 24,176 0*s.* 7*d.* With our carry-forward of £7,577 13*s.* 2*d.*, the amount available for discussion to-day is £47,294 9*s.* 1*d.* With your consent we propose to transfer to reserve £10,000, to pay a dividend of 20%, which will absorb £30,000, and leave us a carry-forward for the current year of £7,294 9*s.* 1*d.* I hope you will consider this a satisfactory result. It is not so satisfactory possibly as it appears, because while we are distributing 20% on our nominal capital, with our reserves, our premiums, and our carry-forward, our capital instead of £150,000 is £250,000. In addition to that there is another thing which is frequently overlooked. There is the fact that this Company was started now nearly nine years ago, and that for a very long period the money was totally unproductive. To get at a correct idea of what the property has cost, you must allow for the period when the money was earning nothing at all, and on that basis I have, to get an idea of it, added the interest that would have been paid if this had been a railway construction company. They would have raised more capital than they absolutely required to develop the property in order that during its unproductive period they could have had funds out of which they could have distributed dividends. We did not do that; we went to our shareholders, and we really raised this money on the very excellent prospect we believed the industry had before it, and, believing us, the shareholders put up that money and waited during the necessary period. But all that time the interest which they had foregone is in reality a capital charge; it would have been a capital charge if we had raised the money by issuing Debentures. I mention this subject because this has a very distinct bearing on the Chancellor's proposal for taxing excess profits, which would hit the new companies unfairly unless the original scheme is revised, which I hope it will be, and I think it will be.

ALL CITY MEN and others are cordially invited to attend

A MEETING

which, by the kindness of the Master and Wardens of the Worshipful Company of Merchant Taylors, will be held in

MERCHANT TAYLORS' HALL,

Threadneedle Street, on

TUESDAY AFTERNOON, 7th December,

at 3 o'clock,

on Behalf of the Extensive WAR WORK of the

CHURCH ARMY,

including RECREATION HUTS, TENTS, and CLUBS for the Troops overseas in France, Egypt, Salonika, the Front, Malta, and Hospitals and Rest Camps [illegible] War Hospitals, Prisoners of War Camps and Relief Centres for Allied Soldiers and Sailors, Refugees, Internees, Prisoners of war and the Interned and the Destitute and Persecuted Protestants in Germany, &c., &c.

THE RIGHT HON. THE LORD MAYOR

(SIR CHARLES WAKEFIELD, Bart.) will preside, supported by A. C. Carson, Esq., K.C., M.P., the Recorder of London; the Right Hon. the Earl of [illegible]; the Lord Chief Justice; M.P.; the Right Hon. Sir Edward Carson, K.C., M.P.; Major-General Sir [illegible] Lloyd [illegible] Commissioner of Police of the Metropolis; the Rev. Prebendary Carlile, D.D., Rector of St. Mary-at-Hill, Eastcheap, and Founder and Hon. Chief Secretary of the Church Army, and many others.

Collection in Aid of the Funds.

A LARGE ATTENDANCE [illegible] BUSINESS MEN, is [illegible] requested.

RESERVED SEATS [illegible] application to Prebendary Carlile, D.D., Church Army Headquarters, Bryanston Street, Marble Arch, W., who will also [illegible] DONATIONS (crossed Barclays') for announcement at the Meeting.

It will hit the young companies very hardly, while it will allow the older established companies to escape entirely.

Current Year's Output.

Turning to the current year, we estimate to harvest 1,042,000 lb. of rubber, and look for a reduction in costs. The costs cannot come down to the point we hope to get them down to eventually, because there is constantly fresh rubber coming in. While we are tapping the younger areas, this tends to keep the cost up, but we do look for a reduction in costs, and eventually we shall, as we have always told you, in this Company, produce our rubber very economically. The crop harvested up to November amounted to 462,804 lb., against 303,414 lb. harvested during the corresponding period. Of this we have sold 122,891 lb. at an average of 2*s.* 3.33*d.*; and under forward contract we have 483,840 lb. to deliver at 2*s.* 2.70*d.* I think we can rest satisfied that the prospects of the Company are in every way satisfactory. The estates are in first-class order, and, in addition, the new railway is now open, with a station on one of our divisions. Therefore the transport difficulties which we have had in the past will be entirely done away with. A cable that we have received with regard to the condition of the estates is to the effect that everything on the Tandjong Estate is in the best condition throughout.

With regard to the Excess Profits Tax, I think that from what the Chancellor of the Exchequer told the deputation of the Rubber Growers' Association, he is quite prepared to extend consideration to the industry as a whole. A point has been raised with regard to the payment of quarterly interim dividends, and, whilst I have no shadow of doubt that we are getting to a position when interim dividends may be considered by the Board, to go in for any settled policy of quarterly dividends is out of the question at the present time. The Chairman concluded by moving the adoption of the report and accounts.

Mr. C. E. Morrison seconded the motion, which was carried unanimously.

The Chairman moved that a dividend of 20%, less income tax, be paid, and that the sum of £10,000 be placed to reserve account.

The motion was seconded by Mr. Croll and carried.

The retiring director and auditors were re-elected, and a hearty vote of thanks was accorded to the directors, agents, and staff in the East.

A sum of £200 was voted to the Red Cross Society, and the meeting terminated.

RAND DEVELOPMENTS.

East Rand.—Recent development showings (excluding shaft sinking) have been as follows:—

		Total Feet	Footage Sampled	Average Reef Width Inches	Assay Value	Shilling-Inches
1914.	Mar. qr. ...	10,965	8,374	27	43/9	1,181

* Figures taken from annual report.

The September report sets out: "The values disclosed by development operations for the quarter show practically no improvement on the figures for the previous quarter, the percentage of payable ore being still slightly under 50%. The 23rd or bottom level, Driefontein, the 23rd level, East, Cason, the 23rd, 26th, 28th and 30th levels, Hercules Section, are all showing payable values. A winze from the 31st level, Hercules Section, is down 93 feet, and is in ground of high value, the figures being 21.8 dwts. over 28 inches. This working is the deepest in your mines, being 4,752 feet, vertical, below the surface."

VAN RYN GOLD MINES ESTATE, LIMITED.

REPORT OF DIRECTORS to be submitted at the Twentieth Ordinary General Meeting of Shareholders, to be held at Winchester House, London, E.C., on Wednesday, the 15th day of December, 1915, at 12 o'clock noon.

The Directors beg to submit their Twentieth Annual Report, together with the balance sheet as at June 30, 1915, and the profit and loss account for the twelve months ended that date, and accompanied by reports of the managing director and manager on the operations at the mine during the same period.

PROFIT AND LOSS.—The net profit realised during year amounted to ... £262,143 14 7

To this has been added:—

The balance brought forward from the previous year 16,165 2 3

Making a total available profit of ... £278,308 16 10

Which has been appropriated as follows:

For payment of—

Dividend No. 22	£112,500 0 0	
Dividend No. 23	112,500 0 0	
Taxes	23,276 11 6	
Union Government War Levy (first moiety)	5,706 19 0	
Sundries, as per Appropriation Account	8,825 19 6	
		262,809 10 0

Leaving a balance to be carried forward to the current year of ... £15,499 6 10

MINING OPERATIONS.—The mill ran 332.6 days, and with accessory tube mills crushed 462,920 tons of ore, yielding 137,815,576 ounces of fine gold, of the value of £579,996 8*s.* 5*d.*, or at the rate of £1 5*s.* 0.698*d.* per ton. Working expenditure amounted to £344,298 12*s.* 0*d.*, or 14*s.* 10.501*d.* per ton milled, resulting in a profit of £235,697 16*s.* 5*d.* equal to 10*s.* 2.197*d.* per ton.

This result does not differ materially from that of the preceding year. While the ore treated has been greater in quantity by 23,020 tons, it has been of a slightly lower grade (25*s.* per ton as compared with 26*s.* 10*d.* for last year). Working expenditure, on the other hand, has been reduced from approximately 16*s.* for last year to 14*s.* 10*d.* per ton for the current year, thus showing a net reduction of 8*d.* per ton.

ORE RESERVES.—The manager's estimate of the ore reserves at the close of the financial year under review is as follows:—

Fully developed.—1,953,000 tons of an average value of 6.20 dwt. over 54 inches.

Partially developed.—18,000 tons of an average value of 9.9 dwt. over 40 inches.

In compiling the above estimates all ore of a value below 4.3 dwt., of which 1,121,000 tons have been either fully or partially developed, has been excluded and for the time being classified as unpayable. It is quite possible that a substantial portion of this tonnage will eventually prove capable of profitable handling.

The position as regards payable tonnage fully developed remains practically the same as that at the end of last year, a small decrease in quantity and a reduction of .29 dwt. per ton in value being recorded.

In accordance with custom no credit appears in the balance sheet for these reserves, the cost of which has been met out of past profits.

CAPITAL EXPENDITURE.—Except for an outlay of approximately £450, incurred in the fencing of our property, the expenditure on Capital Account has been confined to certain additions to our plant and machinery, of which the more important is the installation, in conformity with Government Regulations, of two new dump spraying plants. The total expenditure, amounting to, roughly, £2,500, has been provided out of current revenue.

WATER SUPPLY.—It is satisfactory to record that the position of our water supply shows a marked improvement compared with that of a year ago. In the meantime copious rains have fallen, with the result that both dams on the Company's property were filled to their utmost capacity, and a full supply of non-potable water is assured for some time to come from the Company's own sources.

DIVIDENDS.—The year's revenue has admitted of the declaration of the following dividends, which were paid on the dates set opposite each respectively, viz.:—

No. 22, of 22½ per cent. (less tax), January 11, 1915.
No. 23, of 22½ per cent. (less tax), July 15, 1915,

making, together, 45 per cent., or 9*s.* per share, for the year.

A detailed list of the dividends, amounting to £2,144,500, paid since the incorporation of the Company, will be found in the usual annexure attached to this Report.

INVESTMENTS (WAR LOAN).—The Directors have participated on behalf of the Company in the subscription of 3½ per Cent. Government War Loan stock to the amount of £100,000.

RETIRING DIRECTORS.—Under the provisions of the Company's Articles of Association, Messrs. Leopold Albu and P. G. Hamilton Carvill retire, and, being eligible, offer themselves for re-election.

AUDITORS.—Messrs. Deloitte, Plender, Griffiths and Company, the Auditors, retire in accordance with Clause 148 of the Articles of Association, and, being eligible, offer themselves for re-election.

GENERAL.—It is a pleasure to the Directors again to record their appreciation of the services rendered by the manager and his staff under the supervision of Sir George Albu, the Managing Director, and of the satisfactory results which continue to attend their efforts on the Company's behalf.

F. A. GILLAM, *Chairman.*
T. FREDK. THORNE, *Secretary.*

"LONDON ISSUE."]

NATIONAL DEFENCE LOAN

OF THE

GOVERNMENT OF THE FRENCH REPUBLIC.

ISSUE OF FIVE PER CENT. RENTES.

Both Capital and Interest will be exempt from all taxes, present and future, of the Government of the French Republic.

Interest payable Quarterly on the 16th February, 16th May, 16th August, and 16th November, the first Coupon (for a full quarter's interest) being payable on the 16th February, 1916.

PRICE OF ISSUE—£3 4s. per Fcs. 100 NOMINAL CAPITAL

(Being the equivalent, at the exchange of 27.50, of Fcs. 88, the price at which the Loan is being issued in Paris.)

Applications, which must be accompanied by a deposit of Seven Shillings per Fcs. 100 applied for, will be received at the Bank of England, Theadneedle Street, London, E.C. Applications must be for multiples of Fcs. 100 nominal Capital (*i.e.*, Fcs. 5 of Rente).

The amount payable in respect of each Fcs. 100 will be required as follows, viz. :—

	s. *d.*
On application	7 : —
On, or before, Monday, the 31st January, 1916	19 : —
On, or before, Tuesday, the 29th February, 1916	19 : —
On, or before, Friday, the 31st March, 1916	19 : —
Total	£3 : 4 : — @ Fcs. 27.50 per £ = Fcs. 88

or the whole of any amount applied for may be paid up in full at the time of application by a single payment of £3 : 3*s.* 6*d.* in respect of each Fcs. 100 applied for.

THE GOVERNOR AND COMPANY OF THE BANK OF ENGLAND,

with the consent and approval of His Majesty's Government, are authorised by the Government of the French Republic to receive applications for this issue.

The French Government undertake that the issue shall not be redeemed prior to the 1st January, 1931; but they reserve to themselves the right to redeem the issue, in whole or in part, at any time on or after that date.

Both Capital and Interest, which will be exempt from all French taxes, present or future, will be a charge upon the general revenues of the Government of the French Republic.

The issue will be made in the form of Bonds to Bearer, which may, if desired, be registered or inscribed in the "Grand Livre de la Dette Publique" at the Ministry of Finance in Paris, without payment of any fee.

CONVERSION OF

1. French Government Sterling Treasury Bills due 16th January, 1916.
2. French Government 3½ per cent. Rentes (Redeemable).
3. French Government 3 per cent. Rentes (Irredeemable).

1. French Government Sterling Treasury Bills, due 16th January, 1916, may be tendered in lieu of cash where payment in full for an allotment of this issue is made at the time of application. For the purpose of such payments the Bills will be accepted at the rate of £99 : 3*s.* 3*d.* cash for each £100 nominal of Bills surrendered, being the equivalent of par less interest at 5% from the 16th November, 1915 (the date from which interest accrues in respect of the new issue), to the 16th January, 1916.

2. French Government 3½% Rentes (Redeemable) may be tendered in lieu of cash where payment in full for an allotment of this issue is made at the time of application. For the purpose of such payments the Bonds will be accepted at the rate of £3 : 6*s.* 4*d.* cash for each Fcs. 100 nominal capital (*i.e.*, Fcs. 3.50 of Rente) surrendered.

3. French Government 3% Rentes (Irredeemable) may be tendered in lieu of cash, to the extent of not more than one-third of the total amount payable in respect of any allotment of this issue, where payment in full for such allotment is made at the time of application. For the purpose of such payments the Bonds will be accepted at the rate of £2 : 8*s.* cash for each Fcs. 100 Nominal Capital (*i.e.*, Fcs. 3 of Rente) surrendered. The Coupon due 1st January, 1916, must be detached before Bonds are lodged for Conversion.

A declaration, which is embodied in the Form of Application, will be required in the case of all securities lodged for Conversion, to the effect that they have not been in enemy ownership and have remained in physical possession in the United Kingdom since the outbreak of War, or, where issued subsequently, since the date of issue.

Applications for the Loan may be paid up

1. Entirely in cash;
2. Partly in cash and partly by the exercise of one or more of the above Conversion Options; or
3. Entirely by the exercise of one or more of the above Conversion Options;

provided always that in no case may the sterling value of 3% Rentes surrendered exceed one-third of the whole sterling amount payable in respect of any allotment. In any case in which the sterling equivalent of Securities to be converted does not represent the exact amount required to secure an allotment which is a multiple of Fcs. 100 nominal capital, the additional sum necessary to secure such an allotment must be provided in cash.

In case of default in the payment of any instalment by its proper date, the deposit and any instalments previously paid will be liable to forfeiture.

A commission at the rate of twopence per Fcs. 100 nominal capital will be allowed to Bankers and to Members of the London and Provincial Stock Exchanges on allotments in respect of Cash applications, and applications for the Conversion of French Government Sterling Treasury Bills, made on forms bearing their Stamp. No commission will be paid in respect of allotments resulting from the Conversion of French Government 3½% and 3% Rentes.

Application will be made in due course for the admission to a Quotation on the London Stock Exchange of Bonds of the "London Issue." Such Bonds will not be negotiable in France until after the conclusion of Peace.

The necessary Forms of Application, viz. :—

1. For Subscriptions by Single Payment, whether in Cash, Securities, or both;
2. For Cash Subscriptions payable in Instalments,

may be obtained at the Bank of England, London, E.C., and at the Branches of that Bank; and at any Stock Exchange in the United Kingdom.

The List of Applications will be Closed on or before Wednesday, the 15th day of December, 1915.

BANK OF ENGLAND, E.C.,
29th November, 1915

THE IRTYSH CORPORATION, LIMITED.

7 Gracechurch Street,

London, E.C.,

8th December, 1915.

Dear Sir (or Madam),

I beg to send you herewith copy of a Report from the Technical Committee of the Ridder and Kirgiz Mining Companies, the Share Capital of which Companies is held by this Corporation. This Report is compiled from information collected by the Members of the Technical Committee during their recent visit to the properties.

The figures given in this Report compare very favourably with the statement made by Mr. H. H. Knox in the Prospectus of this Corporation issued a year ago. The total profit in the Ore Reserves as now estimated and calculated on the same basis used by Mr. Knox amounts to £10,800,000, as against the £7,400,000 taken in Mr. Knox's Report. This value of Ore Reserves at the present time is based on the very conservative prices for Metals used in Mr. Knox's Report, and no allowance is made for the high prices now ruling.

Unexpected difficulties have been met in shortage of labour, materials and transport facilities, but in other ways greater progress has been made than was anticipated a year ago. It is hoped that this good progress will be maintained, in which event the higher values of metals now ruling will return a much larger profit than was estimated in the Prospectus.

The Directors are glad to inform you that Treasury Permission has been received for the issue of shares reserved against options, and that there are no restrictions on the exercise of these options at par value; arrangements have been made for the Company to issue these shares within one week of notice being received from option holders. The Committee of the Stock Exchange have authorised dealings in these shares on the Stock Exchange.

Yours faithfully,

J. P. B. WEBSTER,
London Manager and Secretary.

To the Boards of

The Ridder and Kirgiz Mining Companies,
Petrograd.

Gentlemen,

Following on our visit to your properties we beg to report as follows:—

RIDDER.

Ridder Mine.—The bottom (or 160 feet) level of the old workings of the Ridder Mine has been straightened, enlarged, and timbered for its full length, and crosscuts run towards the footwall, mainly in solid sulphide ore, considerably above the average given by the boreholes.

The New or North Shaft has been sunk to a depth of 50 feet, and preparations are on the way for sinking the Main or Gregoriefsky Shaft another 100 feet. The solid sulphide available above the 160-foot level will more than supply the Mill until deeper levels are opened up for the larger operations we have in view. The shaft house at the Gregoriefsky Shaft is in course of completion, and boilers, compressor and hoist are being installed therein.

Drilling is at present confined to two holes on Sokolni, in order to husband our supplies of fuel. On the opening of the railway, coal from Ekibastus will be available for all uses. The drilling results to date are given on the accompanying schedule, which is brought so far as possible up to date, and contains the results considered of chief importance. Many scattered short sections of mineralised core have been omitted.

Ore Reserves.—A recalculation of these made in August of this year, and based on the borehole results and the assays of the old workings, gives the estimated quantity of ore within the limits of exploration and below the old 160 feet level.

	Long Tons.	Gold Ozs.	Silver. Ozs	Cu. %	Lead. %	Zinc. %	Gross Value. £
Solid Sulphide	945,000	0.47	9.7	1.5	8 1	31 2	15.3
Concentrating Ore	2,229,000	0.71	1.7	0 5	3.5	6.7	5.7
Total ...	3,174,000	0 64	4.1	0.8	7.8	14.0	8.6

This ore is contained between the vertical planes of holes " D " on the South and " K " on the North, and no additions have been made for extensions South or North of these respective planes, nor has any ore been allowed for below the level of the boreholes or for the zinc ore body in the footwall.

We give below, for the sake of comparison, Mr. H. H. Knox's estimate of November 1914:—

Solid Sulphide...	883,000 tons,	£14.9 Gross Value.
Concentrating Ore	1 565,000 ,,	4.7 ,, ,,
Total	2,448,000 ,,	£8.4 ,, ,,

The total profit in the Ore Reserves, as now estimated and calculated on the same basis of recovery and cost as used by Mr. Knox, amounts to £10,800,000, as against the £7,400,000 of his estimate. In both of these calculations prices of metals in Russia are based as below:—

	London Price.	Russian Price.
Gold, per ounce	£4	£4
Silver, ,, ,, ...	£0.1	£0.1
Lead, per ton, ...	£16.0	£20.0
Zinc, ,, ,, ...	£20.0	£24.0
Copper, ,, ,, ...	£60.0	£90 0

Sokolni Mine.—The Sokolni Mine has been sampled so far as accessible, with entirely satisfactory results. The irregular character of the old workings, and the fact that the ore exposed is largely oxidised, make it impossible to present any compre-

hensive averages of the sampling. It appears, however, that the unoxidised ore here is likely to prove similar in character and grade to the Ridder Mine. The results from bore holes are being looked for with interest, though it is far from certain that "A1" and "B1," now in progress, will cut through the main ore body, there being considerable doubt as to the true strike and dip of the deposit.

Mill.—The Test Mill has been converted into an operating unit, and was started in the beginning of November. This plant is expected to have a capacity of 1,500-2,000 tons of solid sulphide a month, producing a zinc concentrate and a lead concentrate with an intermediate material that will be reserved for further treatment. A portion of the zinc concentrates will be hauled to the Ekibastus Railway during the Winter over the snow, to supply the demands of the zinc plant until navigation opens.

Power.—A small water power plant—less than 500 yards from the Mill—is being equipped with a turbine generator. This should be put in operation during the Winter, and is expected to supply more than enough power for the mill. Pending the completion of this, steam power is being used.

General.—Quarters and buildings have been erected as follows:—

Large staff hotel and guest house for visitors.

Post Office.

Small laboratory.

Barracks for 240 single men.

Large material store, almost completed.

Food store; Carpenters' shop; Mechanics' shop.

Small Hospital (altered from existing building).

A local telephone system has been erected, and a line 60 miles long to Usk Kamenogorsk on the Irtysh River.

Railway.—This metre gauge line is to transport coal and stores to, and concentrates from, Ridder, and will be about 60 miles long. 60 to 70% of the 1,550,000 cubic yards of grading on this is completed, and the rails and rolling stock will shortly be arriving at Ust Kamenogorsk. With favourable weather conditions a portion of the rails will be laid this Winter, and it is hoped that the whole line will be in operation next Summer. Meanwhile, as already stated, arrangements will be made to transport sufficient concentrates to Ekibastus during the Winter to ensure the operation of the completed portions of the zinc plant there until the opening of navigation.

Ust Kamenogorsk.—Temporary arrangements are being made at Ust Kamenogorsk for terminal facilities for handling concentrates and coal. Meanwhile plans and estimates are being prepared for the permanent facilities on Bear Island in the river at Ust Kamenogorsk.

RIDDER MINE.

Note.—It is interesting to note that "N 1" at the extreme North, and "P 1" at the extreme South, show continuation of mineralisation, these holes being some 1,500 feet apart. The mineralisation at "P 1" is widespread, showing 58 feet of profitable ore in a width of 293′, each separate band being wide enough for mining separately.

"Gross value in Russia" is calculated on the same basis as used heretofore, the details of which have been given above.

EKIBASTUS.

Coal Mine.—Developments have been entirely satisfactory. The No. 1 Voskresensky Incline Shaft has been sunk to the third level, being an incline depth of 598 feet. The old machinery has been repaired and put in working order wherever possible. A new boiler and compressor house has been built, and an air compressor of 1,100 cubic feet capacity is being installed. A new blacksmith's shop and a small repair shop, and an electric light plant have been added. The South Shaft has been cleaned out to the first level, at a vertical depth of 126 feet, and headings from here are being run. The North Shaft has been timbered down to water level, and is being unwatered. The new Incline Shaft still further North has been started, and has already reached a depth of more than 150 feet on the incline; suitable engine house and boilers are being installed here. 18,000 tons of coal have been produced to the end of September, of which 10,000 tons have been sold, the remainder being applied to our own needs.

As will be noticed from the foregoing, we have considered coal production for this season as secondary to development of the Coal Mine.

It is estimated that granted a sufficiency of labour these shafts will have a total output for 1916 of 120,000 long tons, of which 65,000 tons will be available for sale, over and above our own needs.

Coke Plant.—An experimental coke plant of four Beehive Ovens has been erected, and has satisfactorily demonstrated the good coking qualities of the coal. The coke already produced is of excellent quality. It is planned to erect further ovens in 1916 in order to supply the needs of the zinc and lead smelter. The Coke heretofore made has been from the fines of run-of-mine coal, but the machinery for a small crushing and washing plant is on the ground, and this will be installed as soon as possible.

General.—Additional quarters for workmen, and houses for employees, have been erected. In addition houses for Mine Foremen, and Mechanics, and five large barracks for Kirgiz workmen have been erected. A bakery has been started with an output of 400 loaves of bread a day, also a butcher's shop. The Trading Store has been enlarged, and supplied with a complete stock of goods.

The programme for 1916 will be naturally limited by the labour available, but in addition to normal development work on the mine it will include additional quarters and barracks.

Railway.—The 80-mile broad-gauge railway connecting the Coal Mines with Ermak on the Irtysh River has been put in good condition, and a large tonnage is being transported over it.

ZINC AND LEAD PLANT.

Power Plant.—The first section of this is nearing completion.

Roaster Building.—More than half of this has been built, including the Main Stack, 8 feet in diameter by 75 feet high; 3 Merton Furnaces in this building are nearing completion.

Retort Factory.—The main building, 50 feet by 198 feet, has been completed, and 4 Dry Rooms, 50 feet by 90 feet, are finished, with a capacity for 6,000 retorts.

Distillation Plant.—It is expected to have the first section of the Distillation Furnace building completed before the end of the year, the size being 112 feet by 120 feet, large enough to hold 2 Distillation Blocks. The distillation furnaces (Blocks "B" and "C") are expected to be completed by the end of the year, together with their producers.

Water Supply.—A water supply for the plant has been developed about two miles from the plant, and a pumping station has been erected which will deliver water to a water tower, already completed at the works.

General.—In addition to the above work on the Zinc Smelter, a Mechanical Shop and Foundry has been erected, and fully supplied with machine tools.

A firebrick factory, with a capacity of 6,000 firebricks a month, has been completed and is in operation.

A sawmill has been in operation the greater part of the year. A red-brick factory with five sheds for kilns and drying, and six brick presses were completed early in the year, and operated during the season, producing about 5,000 bricks per day.

The following buildings have been completed at the Zinc Works:—

An hotel for staff and visitors; Post Office; Laboratory and Chemists' quarters. Also a residence for the Smelter Manager, and a large number of houses for workmen with families, and for single men, together with the necessary bath houses, have been completed. A previously existing building has been rebuilt and converted into a hospital.

Lead Smelter.—A suitable site for this, not far from the Zinc Works, has been selected, and plans are being prepared.

RIVER TRANSPORT.

Along the line of the river from Ust Kamenogorsk to Ermak is 430 miles; and from Ermak to Omsk is 386 miles. During the present season we have had operating two steamers and eight barges, and have now secured an additional six steamers and thirteen barges, which are being repaired and altered during the winter and will be available during 1916.

At Koulomzino, on the West bank of the Irtysh opposite Omsk, we have secured a lease on a piece of ground with a Store House on it to facilitate handling of material between the railroad and the river.

With the opening of the new Altai Railway, however, from Novo Nikolievsk to Semipalatinsk, which occurred in October, we have secured another means of approach, both to Ust Kamenogorsk and Ermak. The question of transport on the river has caused a great deal of anxiety during the past season, but with the addition to the fleet, detailed above, we anticipate a satisfactory position in the future.

PROGRAMME FOR 1916.

The Concentration Mill has already started, and it is hoped that the first unit of the Zinc Plant will commence operations in the Spring of 1916. The present mill without alteration can supply sufficient concentrates for two or three blocks of the zinc plant, each block of the zinc plant having an estimated output at the rate of 1,600 tons of spelter a year. Our programme foresees the doubling of the present capacity of the Mill during 1916 and the addition of zinc furnaces to deal with the output of concentrates.

Plans are being got out for the Lead Plant, and it is hoped to have this in operation in the Autumn of 1916.

In order to have a clear understanding of the process involved it should be noted that the Mill produces zinc concentrates and lead concentrates, both of them carrying gold and silver, and the zinc concentrates also carrying recoverable lead. The zinc concentrates will be roasted and retorted in the zinc plant, leaving residues containing lead, gold, silver and copper. These residues will be smelted in the lead plant in conjunction with the lead concentrates for the recovery of lead, gold, silver and copper. The lead bullion will carry gold and silver as well as lead, and there will be a desilverizing plant for removing these metals from the lead. These will then be parted to separate the gold from the silver. Copper will be recovered from the lead furnace as a by-product in the form of copper-lead matte, which will be subsequently sold or treated. Thus it will be seen that the zinc plant returns merely zinc, and the lead plant, in addition to the lead, will return gold, silver and copper.

Respectfully submitted,

A. P. IVANOFF,
R. GILMAN BROWN,
T. J. JONES,

TO THE HOLDERS OF THE

£4,200,000 STATE OF SAN PAULO FIVE PER CENT. TWO-YEAR TREASURY NOTES.

DUE 1st JANUARY, 1916.

Under existing circumstances it is impossible for the State of San Paulo to issue a New Loan in London to repay its Two-Year Notes falling due on the 1st January, 1916.

The State has, however, sufficient funds in London, accumulated out of the Revenue derived from the surtax charged in favour of the Notes, to repay 30 per cent thereof, and has agreed to the renewal of the remaining 70 per cent. at the price of £95 per £100.

The renewed Notes will bear interest, as before, at the rate of 5 per cent. per annum.

Holders are requested to present their Notes at our Counting-House on or after 15th December for payment on the 1st January next of £33 10s. in cash for every £100 of Notes, made up as follows:—

1. £30 in respect of repayment;
2. £3 10s. in respect of the renewal of the remaining £70 at 95 per cent.

The Coupon for £2 10s. per cent due 1st January, 1916, will be paid on the same date.

The Notes will be endorsed with a statement that 30 per cent. has been repaid, and that the date of repayment of the remaining 70 per cent. has been extended to the 1st January, 1918. There will be affixed to the Notes four new Coupons to represent the half-yearly interest at 5 per cent. per annum on the renewed amount.

The General Bond of the State securing the Notes will be extended by a Supplemental Deed to 1st January, 1918.

Notes must be left for 14 clear days and must be accompanied by the usual Declaration that they are not presented on behalf of an Alien Enemy.

J. HENRY SCHRODER & CO.
145 Leadenhall Street, E.C.,
7th December, 1915.

His Majesty's Treasury requires the following Note to be appended:—

His Majesty's Treasury have been consulted under the Notification of the 18th January, 1915, and raise no objection to this renewal. It must be distinctly understood that in considering whether they have or have not any **objections to new issues, the Treasury do not take any responsibility for the financial soundness of any schemes, or for the correctness of any of the statements made or opinions expressed with regard to them.**

THE ELECTRIC SUPPLY COMPANY OF VICTORIA, LIMITED.

THE CUNARD STEAM SHIP COMPANY, LIMITED. FIVE PER CENT. CUMULATIVE PREFERENCE STOCK AND FOUR-AND-A-HALF PER CENT. MORTGAGE DEBENTURE STOCK.

NOTICE IS HEREBY GIVEN that the Transfer Registers of the Company, except for Ordinary Share Transfers, will be Closed from the 18th to the 31st December, 1915, both dates inclusive, for the purpose of preparing the Half-yearly Dividend and Interest Warrants.

By Order of the Board,
W. DRANFIELD, Secretary.
Offices, 8 Water Street, Liverpool,
10th December, 1915.

THE CHINESE ENGINEERING AND MINING COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that the Third Annual Ordinary General Meeting of the Company will be held at Winchester House (Hall No. 23), Old Broad Street, London, E.C., on Friday, the 17th day of December, 1915, at 12 o'clock noon, to receive the Directors' Report and Accounts, to elect Directors and Auditors, to declare a Dividend, and to transact any other business of an Ordinary General Meeting.

Holders of Share Warrants to Bearer wishing to attend or vote at this Meeting must deposit their Warrants with the Company at the Registered Office in London, No. 22 Austin Friars, E.C., two clear days before the day thereof.

The Transfer Books will be Closed from the 10th to the 24th December, 1915, inclusive.

Dated this 6th day of December, 1915.

By Order of the Board,
ALFRED W. BERRY,
Secretary.

22 Austin Friars,
London, E.C.

EAST RAND PROPRIETARY MINES, LIMITED.

(Incorporated in the Transvaal.)

£1,500,000 FIVE PER CENT. FIRST MORTGAGE DEBENTURES.

INTEREST COUPON (No. 10) PAYABLE ON 1st JANUARY, 1916.

NOTICE IS HEREBY GIVEN that Interest Coupon No. 10 of this Company's Five per Cent. Debentures, due on the 1st January, 1916, will be paid in:—

(1) LONDON: At the London Transfer Agency of the Company, 4 London Wall Buildings, E.C.
(2) PARIS: At the Crédit Mobilier Français, 30 & 32 rue Taitbout, Paris.
(3) JOHANNESBURG: At the Head Office of the Company, Farrar Buildings, Simmonds Street, Johannesburg.

Coupons belonging to holders resident in the United Kingdom will be subject to the deduction of the English income tax at 3*s.* 6*d.* in the £.

Coupons belonging to holders resident in France presented at the Crédit Mobilier Français, at the London Transfer Agency, or at the Head Office, will be subject to a deduction on account of the French income tax and the French transfer duty.

Coupons belonging to holders resident in foreign countries other than France must be presented at the London Transfer Agency, and, if accompanied by the usual Inland Revenue affidavits, payment of the interest will be made without deduction.

Coupons presented at the Head Office in Johannesburg must be accompanied by affidavit or statutory declaration stating the full name and address of the owner of the Debentures from which such Coupons have been detached.

Coupons must be left four clear days for examination, and can be lodged from this date at either of the above-mentioned Offices between the hours of 11 and 2 (Saturdays excepted).

Listing forms may be had on application.

By Order,
HERBERT T. HAYWARD,
London Secretary.

9th December, 1915.

THE BENGAL-NAGPUR RAILWAY COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that the Fifty-seventh Ordinary General Meeting of the Bengal-Nagpur Railway Company, Limited, will be held at the Company's Offices, 132 Gresham House, Old Broad Street, in the City of London, on Thursday, the 16th of December, 1915, at Two o'clock in the afternoon precisely, for the purpose of transacting the ordinary general business of the Company required to be dealt with at such Meeting, which includes receiving the Directors' Report and Audited Statements of Accounts and Balance Sheet to 31st March, 1915, and the Auditors' Report thereon, electing Directors and Auditors in the place of those retiring in pursuance of the Articles of Association, and approving and confirming the appointment of Sir Trevredyn Rashleigh Wynne, K.C.S.I., K.C.I.E., as a Director of the Company.

Stockholders whose certificates are dated earlier than 1st January, 1914, are requested to send them to this office for issue of new certificates in accordance with the revised contract with the Secretary of State.

By Order of the Board,
T. R. WYNNE,
Managing Director.

132 Gresham House,
Old Broad Street,
7th December, 1915.

The Interest Warrants will be posted on Saturday, the 1st January, 1916.

THE COMMERCIAL COMPANY OF SALONICA, LIMITED.

NOTICE IS HEREBY GIVEN that the Twenty-first Ordinary General Meeting of the Company will be held at 85 Gresham Street, in the City of London, on Wednesday, December 29th, 1915, at 11 A.M., for the consideration of the Report of the Directors and the accounts of the Company for the financial year ending May 31st, 1915, for the decision as to the disposal of profits carried forward from the financial year 1913-1914, for the election of two Directors in the places of Messrs. Isac Fernandez and Alfred Misrachi, who retire by rotation, but, being eligible, offer themselves for re-election, for the election of Auditors, and for the transaction of the ordinary business of the Company.

In pursuance of Article 21 of the Articles of Association, Shareholders desiring to be present or to vote at the Meeting must deposit their Warrants at least five days before the Meeting, at the Offices of the Company in Salonica, or at the London Office of the Company, 85 Gresham Street, E.C.

By Order,
L. ALLATINI, Director.

VAN RYN GOLD MINES ESTATE, LIMITED.

NOTICE OF MEETING.

NOTICE IS HEREBY GIVEN that the Twentieth Ordinary General Meeting of the Van Ryn Gold Mines Estate, Limited, will be held at Winchester House, Old Broad Street, London, E.C., on Wednesday, the 15th day of December, 1915, at 12 o'clock noon,

To receive the Directors' Report and Statements of Accounts to the 30th June, 1915;

To elect Directors in the place of those retiring by rotation;

To elect Auditors and fix their remuneration; and

To transact the business of an Ordinary General Meeting.

Holders of Share Warrants to Bearer wishing to attend and vote at the above Meeting must, three days at least previous thereto, deposit their Warrants, with all unpaid coupons attached, at one of the following places:—

LONDON: 63/4 Winchester House, E.C.;
PARIS: General Mining and Finance Corporation, Limited, 29 Rue Taitbout:

where they will receive a certificate entitling them to attend and vote at the Meeting in respect of the shares represented by the Warrant or Warrants so deposited.

SPECIAL INSURANCE NUMBER.

The Annual Insurance Number of THE STATIST will be issued on December 18.

The work is the most important of its kind, and places at the disposal of everyone accurate knowledge concerning the really important phases of Life Assurance. Every undertaking is dealt with adequately, and clearly shows the intending assurant the benefits offered by and the position of each Company. The great importance of Insurance has been further demonstrated during the current War, and intending assurants will find our Special Issue of great value in helping them to decide upon the offices from which they may obtain the best results.

Orders for extra copies should be sent in before date of issue.

The Statist.

MONEY.

The Money market shows very little change. The supply of money is abundant, but bills are scarce. And were it not that bankers can obtain as many Treasury Bills as they want at 5%, discount rates would undoubtedly be much lower than 5⅛% for three months' bills and somewhat higher for four and six months' drafts. It is true that the quantity of Treasury Bills taken by bankers is expanding rapidly, and that the total amount now outstanding is no less than 335 millions. But the money thus taken from the market by purchasers of Treasury Bills is retained for only a few hours, and bankers' balances expand with the increase of Government debt. The deposits would be reduced by gold shipments were it not for the issue from week to week of substantial amounts of currency notes.

The exports of gold consequently have no effect upon the floating balances, and the country is not compelled to restrict its consumption. Of course, it is obvious that this process cannot go on indefinitely, and that sooner or later a very sharp restriction of consumption will become necessary. The market hopes that the measures which the Chancellor of the Exchequer is now considering will have the effect of restricting consumption and of checking the export of gold. For the moment the export of gold has been reduced to relatively small proportions by the recent Government loan in the United States, by the creation of the new banking credits and by the heavy selling of American securities that is now in progress by British investors. But all the measures that have been taken have not stopped the gold exports. It is hoped, however, that these measures will prevent any substantial export of gold until the new loan comes to be issued early next year and the country is induced to become much more economical and efficient, and thus to bring the adverse trade balance within manageable proportions.

BANK OF ENGLAND.

On balance for the week the Bank of England received from abroad £544,000 in gold, but inasmuch as £1,510,000 in gold was withdrawn for the country, the net loss of gold was £966,000. This reduced the sum held to £50,273,000, which is slightly less than was held in June last, and some £10,000,000 greater than the amount held in July of last year. The loss of reserve was £846,000, which brought the amount to £34,567,000, a figure which compares with about £29,000,000 prior to the War. The note circulation declined £120,000 to £34,155,000. The public deposits increased £2,083,000 to £52,444,000, and the "other" deposits have been reduced £3,506,000 to £90,019,000. There was an increase of £3,000,000 in Government securities, which nearly neutralised a decline of £3,571,000 in "other" securities. In the last fortnight the increase in Government securities has been nearly £14,000,000. The proportion of reserve to liabilities is slightly lower at 24.26%.

FINANCING THE GOVERNMENT.

The Government's disbursements last week were very heavy, amounting to £70,079,000. Doubtless these payments were due to the fact that recently disbursements have been exceptionally small. It would seem, however, that the Government's payments are now up to date. Towards providing this money the revenue contributed £3,816,000, and the balance was found by the issue of nearly £42,000,000 of Treasury bills, by the creation of £20,000,000 of Ways and Means advances, and by the receipt of nearly £12,000,000 from the American loan. The cash balance increased nearly £8,000,000 to £31,882,000. The amount of Treasury bills in issue on Saturday last was £335,394,000, and the amount of Ways and Means advances was £61,046,000.

MONEY IN NEW YORK.

Gold continues to arrive in the United States, and since the beginning of the year the sum received is calculated to amount to about £80,000,000. In view of the enormous balances at the disposal of bankers it is not surprising that money remains cheap, notwithstanding the great expansion in their loans and deposits. Last week the reserves of the Associated Banks were practically unaltered, while their loans were reduced about £1,000,000 and their deposits £900,000. Their surplus reserves increased about £100,000 to £36,088,000. During the past week the sight exchange upon London has risen from 4.70⅞ to 4.72⅛, the sales of American securities by British holders having been heavy, at the same time that the Government has been meeting disbursements in the United States out of the proceeds of the Anglo-French loan, and bankers have been willing to sell exchange against the British credit recently created.

The Irving National Bank of New York notify us by cable that the following rates of exchange are current in New York:—

New York on—		Rate Dec. 9	Par as usually quoted	Discount %
London ...	sight	$4 72	4 86⅓ dollars for £1	2·9
„ ...	cables	$4 72⅛		
„ ...	60 days	$4 67⅛		
Amsterdam	sight	42.70c.	40¼ cents for 1 guilder	Prem. 4·5
Berlin ...	sight	79c.	95 cents for 4 marks	16·8

Switzerland	sight	5 33½fr.	5.18½ francs for $1	2·8
Vienna ...	sight	13 80c.	20¼ cents for 1 kroner	31·0

Rates for prime commercial paper and for call loans in New York are as follows:—

Dec. 9, 1915 ...	Prime paper ...	3-3½%	Call money ... 2%
Dec. 11, 1914 ...	„ „ ...	4½-5%	„ „ ... 3½ 4%

POSITION IN INDIA.

The demand for money in India continues to expand, and no difficulty is experienced in selling the 50 lacs of Council drafts offered. Exchange is firm at 1s. 4 1/32d. The efflux of coined silver from the Currency Department last week amounted to 57 lacs, which brought the aggregate amount to 3,360 lacs. The highest point reached at the beginning of August was 4,015 lacs, so that this season, so far, there has been an efflux of 655 lacs. Last year at this time the stock of silver was 3,069 lacs, while the highest total reached was 3,800 lacs at the end of August.

The following are the minimum Rates of Discount current in India:—

Bombay ... 6 per cent. (Nov. 4, '15) | **Bengal** ... 6 per cent. (Sept. 24, '15)

Particulars of the Tenders received and the Allotments made by the India Council on Wednesday last, December 8, are:—

* Deferred.

From **April 1** to **December 7** inclusive the Council granted remittance for **Rs.10,10,85,435**, realising **£6,742,297**. Up to **December 8** of last financial year the total Bills and Transfers sold was **Rs.6,35,41,861**, realising **£4,245,093**. The total sales for the week ended **December 7** amounted to **Rs. 69,99,374**, realising **£467,613**. The amount to be offered for tender next Wednesday will again be **50** lacs.

SILVER.

THE price of silver, which late last week fell to 26 7/16*d.*, sharply recovered on Monday to 27 1/16*d.*, from which it has since fallen to 26¾*d.* The rise was due to buying for India and difficulty in completing the orders. But in the last few days there has been more willingness to sell. The market is, however, quite firm; and, having regard to the scarcity of supplies, a fresh rise in price would seem to be probable.

Stock Exchange.

Settlement of pre-War open position deferred to a year after peace declaration.—*Vide* Emergency Rules as to conditions.

	TICKET DAY.	PAY DAY.	CONSOLS.
Settlement Days	Tues., Dec. 14 / Wed., Dec. 29	Wed., Dec. 15 / Thurs., Dec. 30	Wed., Jan. 5 / —

ON balance for the week British Government issues show little change in prices, quotations being now approximately: Consols 58½, 3½% War Loan 90, and 4½% War Loan 97¼. Business in the various markets for Foreign Government, &c., and Home and other railway issues has been very restricted. Shipping shares have perhaps been the most actively dealt in of home securities. Rubber shares have generally further improved, with a less active state of the market and a sustained rise in the price of rubber, given little heed to.

The main activity, with some large business put through, has been in American Railway shares and bonds, the latter especially. An incident of the week is the relaxation of regulations as to "physical possession," heretofore restricted to residents in the United Kingdom. Owners in neutral countries of such securities are now permitted to effect sales through English brokers; all bargains, however, having to be inquired into by a sub-committee of the Stock Exchange Committee, who, according to circumstances, permit or refuse permission for transactions to be carried out.

INTEROCEANIC RY. OF MEXICO.

THE annual report of the Interoceanic Railway of Mexico, covering the twelve months to June last, contains little of an encouraging character. The control of the railway and its leased lines is still in the hands of the Government, and as no accounts or remittances have been received from Mexico in respect of the period subsequent to July 1, 1914, the directors are unable to present any revenue account or balance sheet for the twelve months to June last. At the date of making up the last accounts—viz., June 30, 1914—the net revenue account showed a debit balance of £54,314, and this has since been increased to £295,803, which represents the amount due in respect of interest charges, rents, administration expenses, &c., up to June 30, 1915. The Moratorium of one year granted to the Company by the Debenture stockholders and others in June 1914 has had to be extended for a further period of two years, in consequence of the continued unsettled state of affairs in Mexico; and although nothing definite is known as to the immediate future, the recent recognition by the United States Government of General Carranza appears, the directors state, to be an important step towards the restoration of normal conditions. Moreover, the announcement in the House of Commons on Thursday by Lord Robert Cecil that the British Government had also formally recognised the existence of the *de facto* Government of the Republic of Mexico, is another hopeful sign which may go a long way towards restoring confidence. As regards the railway itself, private advices are to the effect that the Company's property is not being properly maintained, that the permanent way has considerably deteriorated, and that some of the stations and a number of locomotives and wagons have been destroyed or damaged. The temporary bridge at San Francisco, some 20 kilometres from Vera Cruz, which was erected to replace the permanent bridge destroyed by the National troops on the occupation of Vera Cruz by the forces of the United States Government in 1914, is reported to have been recently washed away by floods.

VILLA MARIA AND RUFINO RY.

THE Buenos Ayres and Pacific Railway Company operates and manages the Villa Maria and Rufino Railway, and in return for the gross receipts guarantees certain specified dividends on the Company's capital issues. The capital consists of £673,500 4% Debenture stock and £393,750 Guaranteed stock, entitled to dividends of 4% till June 30, 1917, and 4½% thereafter. The price of the 4% Debenture stock is 70¼, and allowing for accrued interest the yield is £5 7/8 per cent. The Guaranteed stock is nominally quoted about 83, and on a 4½% dividend basis the yield afforded is a trifle over £5½ per cent. The guarantee is well secured, and both stocks may be regarded as relatively safe investments. The Buenos Ayres and Pacific is not likely to experience a worse year than it did in 1914-15, and in that period its total fixed charges, including rentals, &c., were covered with a margin of £231,000. The interest on Villa Maria stocks alone require only £43,000.

Mining Topics.

THE firmness displayed last week in the Mining department continued for a day or two in the leading sections, but there came a pause, and the market thereafter presented a wearied appearance. Those persons who had bought speculatively in some cases elected to take profits, and would-be new buyers hold aloof till they see signs of a brightening of the international situation. By the close of the week, where improvements had earlier occurred, there were set-backs, and in most other cases declines were shown compared with a week ago.

Comparatively speaking the volume of business has been much restricted, and certainly, for the moment, no disposition to make purchases is evident. As regards the Rand, from the point of view of intrinsic mining conditions, the position is quite good. Strenuous and successful efforts are being made to increase output, profits are in many cases expanding, and increases are expected to be shown in many of the December dividend announcements, now due. The programme for 1916 is for a steady augmentation of the tonnage treated and of the output.

The City and Suburban's dividend of 6¼% for December compares with 7½% a year ago.

Partly as a consequence of the recent good discoveries and movement in the price of Springs shares and a mild excitement in respect of Daggafontein shares, a feature of the week has been a fidget in the market for small-priced shares of Far Eastern Rand companies. We set out in the table below the approximate present prices of shares, capital, and reference to the areas possessed by individual companies. Later we may set out further detail.

Area		Capital Issued £	Approx. Present Price
956 claims	Boksburg (New)	540,000	1/-
2,101 ,,	Cinderella	1,159,450 and 500,000 5½% Debentures.	5/-
799 ,,	Cloverfield	355,000	6/-
See "Statist," Dec. 4.	Daggafontein (reconstructing).		8/3
347 ,,	East Rand Deep	50,000(2/- shs.)	1/-
Various	East Rand Mng. Est.	450,000	8/-
729 morgen	Geyserle	52,662	4/-
See "Statist," Oct. 16.	New Goch'l Deep	30,000 (2 - shs.)	2/9
5,910 ac. coal, 828 clms. gold	Rand Collieries	631,250	2/6
1000 claims mynpacht	Rand Klips	432,336	5/6
Various	S. Africa Land & Expl.	399,000	2/9
2,701 morgen, 912 claims	Van Dyk	500,000	2/6
5,471 acres, 1,240 claims	Welgedacht	156,750	16/-

All above are shares of £1 each, except where otherwise stated.

Diamond descriptions have scarcely been mentioned, but in miscellaneous gold mining shares there has been a somewhat steadier market for Rhodesians.

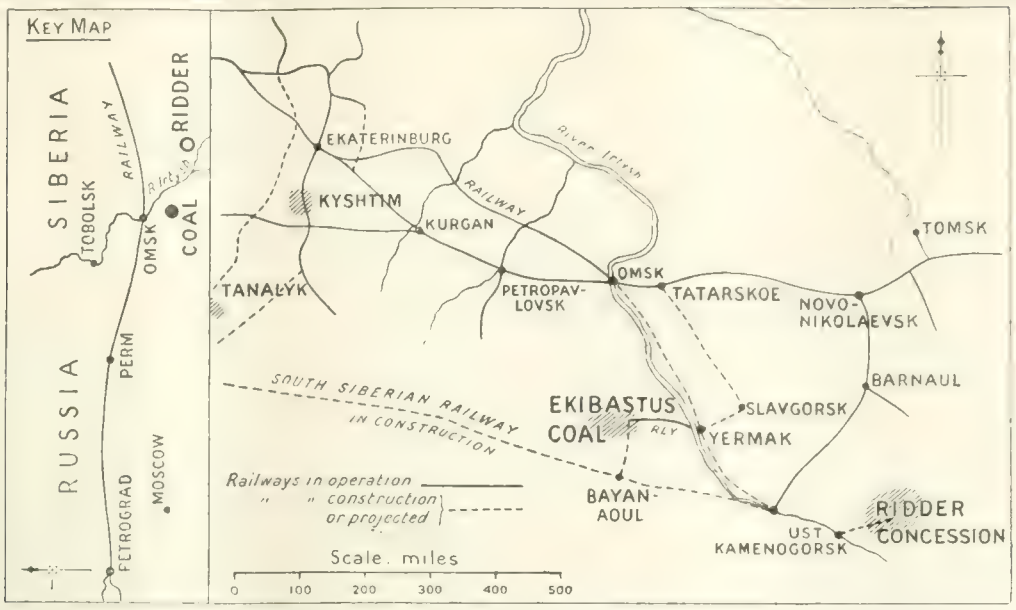
Among base metal companies the two outstanding features of the week have been the distinct recovery in Burma Corporation and the demand for Tanganyika Concessions, alleged to be on American account. Broken Hill shares have also been firm, in some cases showing a distinct improvement in price. We elsewhere deal with the position of three important American copper companies.

Russian shares have been quiet, virtually no changes in quotations being shown. We subsequently comment upon the latest pronouncement as to the position of the Irtysh Corporation.

Champion Reefs have been a poor market, receding at one time to below 9s., the reference to developments in the Annual Report just issued not being regarded as of an inspiriting nature.

In our Correspondence columns subsequently will be found reference to remarks we gave last week upon the subject of the Canadian Mining Corporation.

Daggafontein.—An official circular dated December 8 has been issued that confirms the main particulars we gave last week. The capitalisation will be modified to 178,835 shares in a new company—one new share for each old £1 share, 100,000 £1 shares to be issued at par, and provision for the right to create £400,000 6% First Mortgage Convertible Debenture bonds. Full particulars will be submitted to shareholders at a later date.



IRTYSH CORPORATION.

PROFIT VALUE ESTIMATE, £10,400,000.

A BASE-METAL mining property worked in bygone days in a shallow manner, and which, with the appliances then known, could not be operated in depth, has in recent years been resuscitated and attacked with the most up-to-date development procedure. It is very difficult indeed to bring home to any ordinary investor the importance of proofs afforded of the extent and value of discoveries effected. With many men absolute indifference is felt on the subject of developments, but with the same men, when the era of production comes to be attained, interest is aroused. Readers of THE STATIST have over the past two or three years been informed as to the discoveries made at the Ridder mine, in Central Siberia, now arriving at the stage of production.

We recur this week to the subject of the operations of the Irtysh Corporation, which in December 1914 took over concessions in Central Siberia that had belonged to the Russo-Asiatic Corporation. The *pro forma* report and accounts of the Russo-Asiatic Corporation have been issued to the shareholders this week, and accompanying the report is a circular giving the most recent information as to the progress of the Irtysh Corporation, which through the Russian-formed Ridder Company acquired the mineral concession over 1,600 square miles of the Altai Imperial Estates, with exclusive right until 1919 and preferential right until 1924 to take up mining claims within the area. The Corporation also, through another Russian Company—the Kirgiz Mining Company—acquired the Ekibastus Coalfield, paying a nominal yearly rental to the Russian Government till exhaustion, and simultaneously acquired an 80-mile broad-gauge equipped railway connecting the coal mine with the Irtysh River. All the capital of both Russian Companies is held by the Irtysh Corporation.

A great many people marvelled at the issue of a prospectus in war period at end of 1914 offering £500,000 6% Debentures of the Irtysh Corporation, and they still more marvelled when, despite the state of war, the whole of the Debentures were promptly subscribed. Except for shares passed to the vendor Russo-Asiatic Corporation, none had been issued.

The allocation of the Irtysh Corporation's share capital in £1 shares was as under:—

1,100,000	shares	issued fully paid to Vendors.
200,000	"	reserved against exchange of Debentures at rate of £2 10*s.* of Debenture for the £1 share. *i.e.*—40 shares for £100 Debenture.
250,000	"	reserved against the right given to allottees of Debentures to subscribe for shares at par—one share in respect of each £2 Debenture.
250,000	"	reserved against right to subscribe granted to guarantors of Debenture issue.
200,000	"	reserved for future issue.
2,000,000	...	Total authorised shares.

It will be noted from the above that 500,000 shares may be subscribed for by allottees of Debentures who have paid up in full and the guarantors. Only a few have been so subscribed. In the circumstances of calls on the Debentures of £12 10*s.* per quarter being spread up to and inclusive of the last call due September 1916, not many allottees have exercised their rights. Although dealings in the shares have taken place in recent months between the range of $1\frac{5}{8}$ and 2 for the £1 share, it is only last week that the position was regularised by the following Stock Exchange official notice:

"Dealings in the following securities have been approved by the Treasury and specially allowed by the Stock Exchange Committee under Temporary Regulation 4 (3):

Irtysh Corporation—500,000 shares of £1 each, Nos. 1,100,008 to 1,600,007."

The December 1914 prospectus and the response thereto were all in order. Treasury restrictions and Stock Exchange regulations based thereon only came into operation with the reopening of the Stock Exchange on January 4, 1915. Surprise has been expressed that recognition should now be given to so large and important an amount as 500,000 shares. In reference to this matter it has to be recollected that this country is financially assisting the Governments of our Allies as much as it can. The Russian Government for its Munitions Department requires supplies of base metals and coal; the Irtysh Corporation is doing its utmost to meet the demand, and has attained the stage of erection of a first instalment of concentrating mill at the mineral mine and is pushing on construction of smelting plant at the coal-mine for supplying the Russian Government with zinc and lead derived from its Ridder and Sokolny metal-mines. It is also pressing on development work in the coal mine and on equipment for turning out a large output. No patriotic investor need have any qualms of conscience in doing the best he can in helping the Company financially, and thereby furthering the aims of the two Governments.

Those persons who have closely studied the position of the enterprise from a commercial point of view hold strong opinions of great prosperity for the Irtysh Corporation, controlling as it does an enormous stretch of base-metal-impregnated ground and a huge coal property, also owning its own railway facilities and river transport tugs and barges.

In the autumn of 1914, after a large amount of preliminary boring and development operations, the services were secured of a high expert to make an independent investigation and check the work that had been initiated at Ridder and Ekibastus by the Russo-Asiatic Corporation. As an outcome of his examination Mr. Knox made a very cautious and conservative estimate of the profit value of quantity of ore the borehole showings had brought into sight. On very conservative lines, in the direction of quantities, costs, and certainly so in calculations as to values, he came to a set of figures to which we will refer. In the year's interval since further testing work has been done, both laterally and in depth. Various technical experts of the Corporation have faced the dangers of visits this year to the properties. In the circular we have referred to is the report of the four members of the technical committee as to the position of the mine and the programme as to railway and river communication, erection of mills, smelters, &c., at both the metal property and the coal-mine. They have estimated the further quantities of ore brought into sight by additional boring operations made since Mr. Knox's examination, and on the same conservative price-lines as Mr. Knox, *e.g.*, silver, 24*d.* per ounce, lead and zinc—Russian prices—respectively £20 and £24, the contrast between the estimate of 1914 and that of 1915 is set out below:—

		Estimated Quantity Tons	Profit Value £
November 1914	...	2,448,000	7,400,000
November 1915	...	3,174,000	10,800,000

The view is entertained that there is continuance of metal-impregnated ground for a long stretch of country—perhaps 25 to 30 miles from about north and to south. To a south-easterly direction from the Ridder operations testing on the Sokolny, formerly worked and rich in zinc, has been successfully effected. Nothing is included in the reserves as to possible Sokolny ore. Although the bores actually sunk in the region of the Ridder Mine have proved continuance of impregnated country along a stretch of 1,500 feet from N1 (north) to P1 (south) the estimated ore contents above referred to are only in respect of half that length from Bore K1 (north) to Bore D1 (south), and those who are interested in the matter will like to have their memory refreshed by referring to the diagram we

gave in THE STATIST of May 1, 1915, and use such diagram in reading the up-to-date detail of the widths, assays, and values disclosed by diamond drilling on the Ridder Mine set out in the circular we now call attention to, and particulars of which are given in our advertisement pages.

Before summing up we may note that the first unit of a concentrating mill at Ridder has already started. The object of the mill is to concentrate zinc and lead (both carrying gold and silver). Zinc concentrates also carry recoverable lead. Zinc concentrates despatched to the coal-mine region are there to be roasted and retorted in zinc plant, leaving residues containing lead, gold, silver, and copper. These residues will be smelted in the lead plant in conjunction with the lead concentrates.

Efforts are now being made to bring into operation the first unit of zinc plant by about March next. Plans are being got out for lead plant, and it is hoped to have a first instalment of this in operation in the autumn of next year.

The experimental concentration mill is able at present to deal with apparently at the rate of some 1,500 to 2,000 tons of *ore* monthly, the concentrates of which will go to the smelters, and the units of smelters—at present three—can deal with about 1,600 tons of concentrates per annum each. It is proposed during 1916 to double the capacity of both the mill and smelters. But doubtless at the meeting to be held of the Russo-Asiatic Corporation on December 16 reference will be made to the attainments and the expectations of extensions of plant.

It is very gratifying to find how, despite all the war discomforts, the loss of labourers, the calling-off of skilled men, &c., so much progress has been made this year as is evidenced by the virtual arrival at the first stage of production. Reading between the lines it is clear that the Government has given the undertaking all the facilities it can, and the prospects of the Corporation even in war-times appear encouraging.

It is to be recollected the Company is spending heavily on developments, material and construction, and the outlays, in the main, are in Russia. A very considerable proportion of the money that should be derived from Debentures comes in slowly by driblets as calls fall due. Until the Debentures are fully paid those who are entitled to exercise options and subscribe for a £1 share per £2 of Debenture are few. Yet with the exchange rate for sterling as it is now it will be beneficial if shareholders come forward and enable the Corporation to receive the present abnormal large number of roubles payable in London for the £ sterling and cheaply lay down cash resources in Russia.

We will conclude our remarks by an observation on a market aspect. With the shares that have been issued to vendors, assuming Debentures that have been issued to be all converted into shares and that all the earmarked shares that can be are subscribed, the total issued share capital of the Company, with no debt, would be £1,800,000, and apart from potentialities of further discoveries we have the technical committee reporting on most conservative lines a profit value in sight—not a gross value, but a profit value—of £10,400,000. Dividing an issued 1,800,000 shares into such estimated profit value, we arrive at the rough-and-ready sum of, say, £6 per share. *Quid plura?*

CAM AND MOTOR.

THE report for the year to June 30, 1915, reflects great discomforts, mainly arising from operations with a plant that required modification. The plant prior to alteration secured a disappointingly low rate of extraction of the gold contents of the ore; indeed, the average of April and May 1915 had fallen to approximately 64½% recovery only. By June, the last month of the Company's financial year, a change was consummated through the completion of the modified plant, the extraction of that month rising to very close to 83%. The mine having operated during a war period, and the denudation of labour consequent on events in South Africa, hampered operations. The cost of materials used was enhanced and the tonnage treated, through inadequacy of white supervision, was not up to the capacity of the mill. For the twelve months 142,700 tons were dealt with, but the profit results, for the reasons above referred to, were no better than 6*s.* 4*d.* per ton. A contrast of results to June 30 and since is given below in the manner in which we intermittently give the crushing results of the Company:—

Cam and Motor.—Capital £617,500, in £1 shares.

Year ends June 30 1913-14.	Tons Treated	Value £	Value Per Ton	Expenses £	Expenses Per Ton	Profit £	Profit Per Ton	Price of Shares end of Period
Feb. 28-June 30...	56,130	53,376	19/0	—	—	—	—	19/6
1914-15	142,702	222,067	31/2	176,981	24/10	45,086	6/4	14.3
1915-16.								
Sept. qr. ...	37,428	62,475	33/5	48,123	25/8	14,352	7/9	13/0
Oct.	12,108	19,577	32/4	15,566	25/9	4,011	6/7	13/9

The detail of the year's operations is set out below:—

Year to June 30		1915 £	1915
Gold yield	(142,702 tons)	222,067	31/2
Mine expenses and royalty		176,981	24/10
		45,086	6/4
Sundry revenue...		109	
		45,195	
Appropriations—			
Administration	£2,203		
Debenture interest, &c.	6,413		
Depreciation	21,066		
		29,682	
		15,513	
Balance brought forward		697	
Carried forward		16,210	

Consequent on events there was but a limited amount of development accomplished, and the Company had mainly to rely upon its ore reserves for the mill supply. What development work was done, mainly on the No. 6 level, showed, according to the General Manager, "the ore body to be continuing down strongly, and containing highly payable values over a great width." Much of the altered plant was only *put into efficient operation quite at the close of the financial year.* Reference is made to it having run most satisfactorily since it was installed, and it is to be hoped benefit will result from the higher efficiency in the current year. At June 30, 1914, the Motor ore reserves were returned as 867,032 tons, of an average assay value of about 44*s.* 5*d.* per ton. At June 30, 1915, the quantity was reduced to 739,844 tons, with a lower average assay value of 41*s.* 6*d.* per ton.

As to the Company's finances it will be noted that at June 30, 1915, after clearing off the bulk of the large indebtedness of a year previously by the issue of Debentures for £50,000 and the sale of the northern half of the property for £50,000, there remained a debt of approximately £70,000. Per contra, the Company has owed to it by debtors about £22,000, bullion in hand £22,000, and cash at bank or in hand some £6,000. Any balance of floating indebtedness must be cleared off out of future profits before the dividend stage can be attained.

ASHANTI GOLDFIELDS.

THE report of this, the richest West African gold mine, for the year ended June 30, 1915, is a very satisfactory one. The ore milled in the year increased to 131,236 tons, in comparison with 117,867 tons in the preceding twelve months, and though the yield per ton declined from 73*s.* 6*d.* to 68*s.* 1*d.*, this was nearly offset by the reduction in working costs to 37*s.* 6*d.* per ton, against 42*s.* 5*d.*, with the result that the working profit for the year rose to £201,158, or

£17,400 more than in 1913-14. After including sundry receipts, and deducting Government royalty, depreciation, and directors' extra remuneration, the net profit of the past year was £159,656, against £145,731 in respect of 1913-14. The total dividend of 68¾% paid for the past year absorbed £151,670 and £8,000 is added to the carry-forward. In respect of 1913-14 the same rate of dividend was paid, but the amount absorbed exceeded the profit available by about £1,600, and the carry-forward was reduced to that extent.

The conservative distribution of the past year's profits and the liberal allowance for depreciation have had the effect of further strengthening the already strong financial position, and the surplus liquid assets at June 30, 1915, consequently amounted to £63,827, against £51,500 a year previously. In comparison the issued capital of £220,611 figures favourably. The following table gives a contrast of the results of operations during the last six years and shows the profits earned and the manner of their allocation:—

	Years ended June 30—					
	1915	1914	1913	1912	1911	1910

* Prior to the year 1911-12 working costs included only a portion of outlay on mine development.
† Including profit on re-treatment of old tailings.

It will be noted from the table that the ore reserve position shows very material improvement. The quantity of ore in sight at September 30, 1915, amounting to 433,900 tons, shows an increase of only 1,400 tons on the year, but the average value has improved as much as 8*s.* 5*d.* per ton, to 91*s.* 6*d.* This is despite the treatment during the year of 131,000 tons of ore, averaging 73*s.* 2*d.* per ton. As a result of the increase in the gold contents of the ore reserves their estimated profit value is now £176,000 more than a year ago. The contributions of the different sections of the property to the ore reserves of this year and 1914 will be seen from the following:—

Ore Reserves.

	—At Sept. 30. 1915—			—At Sept. 30, 1914—		
	Tons	Assay Value Dwt.	Profit Value £	Tons	Assay Value Dwt.	Profit Value £
Ashanti main workings	22 000	20 0	46.000	34.100	21 08	64 400
„ Obuasi chute ...	266 900	28 0	761.500	213 400	27 3	563.700
Ayeinm mine	80 000	9 0	10.100	120 000	10 0	13 200
Justice's mine	65.000	11 0	11.500	65.000	11 0	11 800
Totals	433.900	21 55	829.700	432.500	19 56	653.100

It will be noted that the main reliance of the Company is the Obuasi chute, and that the improvement in the ore reserve position is entirely due to the very satisfactory manner in which this ore body is opening up. The Consulting Engineer reports that the four bottom levels—Nos. 12 to 15—have all contributed to the improvement. No. 12 level, for 560 feet driven along the chute, shows over 58,000 tons, value 30 dwt. per ton, as against 30,000 tons of the same value a year previously, although a fair proportion of ore has been taken out of the level during the twelve months. At No. 13 level, the 1914 provisional estimate of 20,200 tons of ore averaging 27 dwt. has been increased to 55,000 tons of 29-dwt ore. At the two new levels of the year—Nos. 14 and 15—for the part of the chute developed the provisional estimates aggregate 48,000 tons, of a value of over 25 dwt. per ton.

Having regard to the strength of the ore reserve position, it is certain the output and profits could be increased but for one drawback. The working conditions at the Ashanti mine, especially in the matter of ventilation, limit the output capacity to that attained in the past year, and the Consulting Engineer, consequently, does not look for any further improvement in production and earnings. Indeed, he apparently looks for some decline, as will be seen from the following contrast of his forecast of output per month for the current financial year with the actual performance of the past year:—

	1915-16 Proposed Output —per Month—		1914-15 Actual Output per Month	
	Tons	Yield £	Tons	Yield £
Ashanti mine	6,200	28,500	6,207	28,164
Ayeinm mine	3,500	5,600	3,770	6,700
Outside sources	1,500	2,100	1,546	2,496
Totals	11,200	36,400	11,523	37,360

The Consulting Engineer states that the rate of output proposed should represent a profit of well over £150,000 for the year, apparently after deduction of all expenses and royalty, but not depreciation. He adds that if conditions permit of increasing the rate of mining from the Ashanti mine with safety this estimate will, of course, be exceeded. In this connection it may be pointed out that according to the monthly returns the tonnage milled for the first four months of the current financial year amounted to 46,977 tons, giving a gold yield of £152,107, or 64*s.* 9*d.* per ton, the working profit for the four months, after deduction of depreciation, being £54,361. This rate of profit is equal to about £180,000 per annum before allowance for depreciation; but it would be as well not to rely too much upon such a figure, for, as the sources of ore supply outside the main reliance—the Ashanti mine—become exhausted the Ashanti workings will alone have to feed the mill, and, as before said, their condition is not at present such as to enable a larger output to be attained. In conclusion the Consulting Engineer says:—

> The technical difficulties in the way of accelerating stoping in Ashanti mine, so as, in the first place, to provide against the falling-off in yield from outside sources, and, in the second place, to permit of distributing the £829,000 of present visible profit more rapidly than at the current rate of approximately £150,000 per annum, are probably not insuperable. If, at worst, they cannot be overcome, then it will merely mean that the present ore reserve represents over five years' profit-earning at, roughly, £150,000 per annum instead of a shorter terms of production at a higher rate.

If £150,000 should prove to be the future rate of annual profits, the surplus available for distribution after deduction of, say, £20,000 per annum for depreciation would be sufficient to enable the payment of 60% annual dividends. For the current year two distributions, aggregating 50%, have already been announced, and it looks as if the total for the twelve months will be the same as for the past two years, viz., 68¾%. The price of the Company's 4*s.* shares is now about 18*s.*, and even if for the technical mining reasons above mentioned the rate of earnings permits of only 60% annual dividends in the future, the yield to the purchaser would still be nearly 13⅓%. The ore reserve position is very strong, and as development results on the Obuasi chute, which is a rich and substantial body of ore, continue to be good, the shares do not appear to be over-valued. The market capitalisation is, roughly, £1,000,000, against which may be placed the estimated profit value of the ore reserves, namely, £829,700. The margin not in sight is not a great one, therefore.

VAN RYN GOLD MINES ESTATE.

THERE is little feature of interest in the report of this Company for the year to June 30 last. A comparison of the profits and appropriations of the last two years is given below:—

Year to June 30.	1915		Per	1914		Per
		£	Ton.		£	Ton.
Gross receipts ...	(462,920 tons)	579,996	25/0	(439,900 tons)	590,129	26/10

AMERICAN COPPER COMPANIES.

As an outcome of the prosperity being enjoyed by the great American copper-producing companies, instances have occurred where there has been either restoration or increase of dividends in 1915 compared with previously. Even the Utah Copper Company, after a continuance for some years of a quarterly distribution of 75 cents, improved its dividend in the June and September quarters to $1, and has this week announced an increase of dividend to $1½ per $10 share. The probability is that the Ray and Chino Companies, in view of the progress made to the end of the September quarter, will raise their distribution. We deal below with the results of the first nine months of 1915 as to each company.

In considering variations shown by the big American copper corporations as regards outputs and selling prices it is necessary to bear in mind the kaleidoscopic changes that have occurred in supply and demand. In the second half of 1914 there was complete demoralisation of all markets, and producers of copper, in great part, shut down productivity. There was an *immense restriction of production*, and further, much uncertainty as to whether supplies sent to Europe from America would meet with responsive absorption. The seas, too, were not free from danger, and nervousness prevailed. As the war went on, despite the hemming in of the Central Powers, the demands of the Entente and Neutral Powers became increasingly large, so much so that, with restriction of output, the demand attained the stage of being larger than the output for the time being. At the beginning of 1915 American producers at first relaxed restrictive measures and afterwards rapidly increased their outputs to the best of their ability quite early in the year. Such expansion policy has been continued, accelerated by the overflow of large orders from Europe to the United States for munitions of war in which copper figures.

About the middle of the year there was a wavering. Production had been greatly increased and prices carried to high figures. As production still continued at a high figure a reaction in prices occurred. Still the large demand continued and again in recent months we have witnessed an appreciable advance in prices, in the main, doubtless, due to the big orders for munitions, and also in part due to the seasonal orders falling due late in the year at the time when general traders begin to lay in stocks so as to be able to meet the demands of the thousand and one home customers all over the country. It is impossible to form any definite idea of what will be the course of the market in the near future. We certainly have the fact that an enormously high rate of profit is being shown which will undoubtedly stimulate output, but the market is liable on any definite signs of conclusion of war to a severe set-back. With a price of near to 20 cents per pound for electrolytic copper efforts to bring about a further advance may react upon those who make the efforts.

UTAH, RAY, AND CHINO COPPER COMPANIES.

The Utah Copper Company entered the dividend stage in 1910, and has passed through a series of alternate poor and good years. During the latter part of last year and the beginning of this, with the uncertain outlook prevailing, the Company adhered steadily to the continuance of quarterly dividends at the rate of 75 cents per $10 share. Such progress, however, was made this year that for the June quarter, and again in September, the quarterly distribution was raised to a dollar, and this week has been further increased for the December quarter to $1½ per share. For the September quarter the maximum quantities as to tonnage of ore and yield of copper obtained have been shown, and the conservative nature of the directors' policy is evidenced by the fact that the earnings of the nine months to September 30 were, in round figures, $11,000,000, the dividends distributed called for some $4,500,00, and the surplus unappropriated profit for the nine months exceeded $6,500,000.

In January last the price of the shares in London momentarily was as low as 10⅛; at present the price is about 17. The New York quotation by latest advice is reported 80. The shareholder in New York, on a maintenance of a quarterly distribution of a dollar per share, obtains at price of about $80 per share a yield of under 5¼% on his investment, while if distributions of $1½ per share are continued the yield is improved to 7½%.

Quarterly dividends paid (75c., ?', $1						4,467,347
Surplus—gross						6,526,929

The Ray Consolidated Company in 1915 has not put forward so great an effort to expand its output as other American copper companies. In the first half of 1914 the output was close to 37,000,000 lb. of copper; for the first half of 1915 it was approximately 29,000,000 lb. only. Notwithstanding the smaller quantity, however, the income of 1915 was somewhat larger than that of 1914, say, $2,080,000 against $1,?27,000. The increase was derived from a high level of price of copper sold in the June quarter.

The September return refers to the expectation of early completion of betterments as to reduction plant and the hope that operating results in the near future will be more satisfactory "than ever before in your Company's history."

It may be recalled the Company entered the dividend stage in 1913 and paid three dividends of 37½ cents each for the last three quarters. In 1914 it continued its 37½ cents per share distribution for the first two quarters; then stopped paying dividends and did not resume them until the June quarter of 1915. For each of the June and September quarters the amount distributed was 37½ cents, and it will be noted from the figures given below that appropriations for dividends absorbed, in round figures, $1,100,000, and, again in round figures, the surplus income set aside exceeded $1,700,000. From this it looks as if quarterly distributions at the rate of $1.50 per annum in respect of the $10 shares are likely to be continued for some while ahead, especially as in the current quarter an appreciable further rise has occurred in the price of copper.

At the present time the New York quotation is in the region of $26, and at this price, allowing for accrued dividend, the yield to the investor, on the continuance of a distribution of 37½ cents quarterly on the $10 share, is approximately 6%. With the surplus so much over the amount required for dividend the outlook is for an increase in quarterly rate.

Recent Progress of the Ray Consolidated Copper Company.

The September quarterly report of the Chino Copper Company is a poor one. The ore extracted was of lower grade, and the quantity of metal secured, notwithstanding about 100,000 additional tons of ore in September over the June quarter, was much the same for both quarters. The costs of the September quarter were higher; the price realised for the metal produced was 16 cents only, against 17½ cents per pound for the previous quarter. Still, the Company for the nine months shows that after distributing dividends of, say, $1,740,000, there was an undivided surplus of $2,713,000. The three quarterly dividends were respectively 50, 75 and 75 cents. The contrast of results is set out below:—

Recent Progress of the Chino Copper Company.

	Ore Treated Tons (2,000 Lb.)	Grade %	Metal Produced Lb.	Price Realised per Lb. Cents	Cost Returned per Lb. Cents	Total Income $
Year 1914 ..	1,907,300		54,748,954	13.325	—	3,254,410

Quarterly dividends paid 1915 (50c., 75c., 75c.)						1,739,880
Surplus						2,712,720

The latest mail advice gives the price of the $5 share as about $55½, and at such a price, on the basis of 60% dividends—*i.e.*, $3 per $5 share per annum—the yield to the investor is about 5½%. The probabilities are for the quarterly distributions to be increased.

RAND GOLD OUTPUT.

Aurora West United.—There are in issue 212,705 10*s.* shares, and a favourable opportunity will be taken for a further issue to deal with floating debt, the total authorised capital being £300,000, in 600,000 10*s.* shares. Net floating indebtedness at December 31 about £105,000. Plant—80 stamps and a tube mill; capacity increased to 15,000 tons monthly.

MINE SHARE VALUATIONS.

A CRITIC writing in a Johannesburg technical paper criticises the recent change made by THE STATIST in valuations of Rand mining shares. Previously to the War we used to give the present value of a share on assumption the investor desired 7% income, and a return at end of life of the mine of the money invested through a sinking fund, bearing 4% interest, being accumulated from the excess of dividends over amount used as income. This basis we changed to 10% income, and our critic considers the change we made as "scarcely justified." While we hold that money employable in safe securities commands so much higher a rate than previous to the War, we made the change as to mining shares not only for that reason, but also as a measure convenient to assume and liable to modification according to individual opinion. If one is content with less than 10% on a reasonably assured investment in a proved mine with prospect of long life, he can, on inspection of what the 10% income basis shows as to present value of the share, gauge whether the actual market price is attractive or otherwise. In the table below examples are given of valuations based on the investor in a mine £1 share with probable dividend to average 20% for life of 20 years, looking for 7, 8, 9, and 10% income, and return of his money at end of a life of 20 years through investment at 5% compound interest of dividends in excess of what will satisfy his income requirement:—

Income yield required	7%	8%	9%	10%
Present value of £1 share ...	£2	£1 16 3	£1 15 3	£1 [illegible]3

SCOTTISH TEMPERANCE LIFE ASSURANCE COMPANY, LTD., 3 Cheapside, E.C., and 35 Piccadilly, W.

W. A. BOWIE, London Manager.

SPECIAL INSURANCE NUMBER.

The Annual Insurance Number of THE STATIST will be issued on December 18. The work is the most important of its kind, and places at the disposal of everyone accurate knowledge concerning the really important phases of Life Assurance. Every undertaking is dealt with adequately, and clearly shows the intending assurant the benefits offered by and the position of each Company. The great importance of Insurance has been further demonstrated during the current War, and intending assurants will find our Special Issue of great value in helping them to decide upon the offices from which they may obtain the best results.

Orders for extra copies should be sent in before date of issue.

The Statist.

LONDON, SATURDAY, DECEMBER 11, 1915.

FINANCING THE WAR.

PROCESS OF MOBILISATION.

THE American Exchange has advanced this week to over 4.72, and the amount of gold sent to the United States has been inconsiderable. It is true that a fair amount of gold has been exported to a number of miscellaneous countries, including Spain, Holland, Egypt, Japan and South America, but the aggregate has not been great, and has been fully provided by arrivals from South Africa and elsewhere. On balance there has been a small addition to the Bank's stock of gold during the past week. The strength of the American Exchange arises not merely from the recent loan of £50,000,000 and the creation of the banking credit, but by large sales of American securities by British investors now that the investing public are becoming aware of the service they can render to their country by assisting it to pay for the great quantity of goods it is buying from abroad by the sale of American bonds and stocks. The action of the Carnegie Trustees for the Universities of Scotland, the Hero Fund and the Dunfermline Trust in deciding to sell about £5,000,000 of United States Steel Corporation bonds is an example which a great many people will follow, not because they doubt the value of their American investments, but because of their desire to assist their country in its need.

Last week we appealed to the leaders of industry to assist their country at the present time in devising some plan by which they and the working classes would co-operate together for the purpose of keeping down the country's great expenditures which, if not restricted, would bring about a further great rise in prices, not only of home goods but of foreign goods also, to the great disadvantage of the whole nation. In making this appeal to them we realised that in keeping their mills and factories working night and day they are animated by a desire to render the greatest possible service to the nation in the present struggle. And just as we expressed our conviction that the capitalist classes would render this most valuable assistance, so we now anticipate that our investors who possess great or small quantities of American securities will be willing to place them at the disposal of the Government for meeting the great adverse balance of trade, or will be willing to sell their securities and to place the proceeds in the forthcoming Government loan or in Treasury Bills, which can be bought at the Bank of England in amounts of £1,000 to give a return of over 5%.

Most people now understand that the country not only needs to prevent a further rise in prices and a fresh expansion in the value of our imports, but requires to reduce its consumption and thereby to bring about a decline in imports and an expansion in exports, as well as to sell a substantial part of its American securities. Possibly later on, when the new great munition factories get into working order, we may not need to buy abroad as much ammunition as we do at present, but as far as can now be seen this country and our Allies will need to buy from the United States, from Canada, and from other countries all the supplies those countries are prepared to sell to us, and in order to make payment for these purchases it is essential that we should restrict within the smallest possible compass our consumption of all unnecessary things, and should be willing to make payment for the balance that cannot be paid for by exports or by services by selling securities which other countries are prepared to buy from us. At the present moment American securities and Canadian Pacific shares alone become free of income tax when sold to foreign investors, and therefore these securities are specially needed to provide the necessary money.

Beyond the measures the Chancellor of the Exchequer is taking to induce holders of American securities to provide them for exchange purposes and beyond the additional banking credits that are being created, he is also devising measures to induce the country to become more economical and to meet a larger part of the expenditure on the War by means of its additional savings. This week he has appointed a strong Committee to consider the question of obtaining contributions to War Loans from the working classes. The Committee includes not only representatives of the Government, of the Treasury and of bankers, but men who are specially acquainted with the working classes and whose knowledge should be of special value for the purpose in view. The Chairman of the Committee is the Financial Secretary of the Treasury, the Right Hon. E. S. Montagu, who, since the War began, has been specially active in endeavouring to solve the many financial difficulties that have had to be overcome. As the question of inducing the working classes to provide much greater sums for the War than hitherto is one of great moment, not merely as regards the immediate object to be accomplished, but also as regards the restriction of consumption and the provision of means by which they may successfully surmount the trade depression which may come after the War, we append the names of the Committee:—

The Right Hon. E. S. Montagu, M.P., who will preside; the Governor of the Bank of England; Mr. Stanley Baldwin, M.P.; Mr. Henry Bell, general manager of Lloyds Bank; Sir John Bradbury, K.C.B., Permanent Secretary to the Treasury; Mr. J. Burn, actuary to the Prudential Assurance Company; Mr. Alexander Cargill, actuary to the Edinburgh Savings Bank; Mr. F. W. Goldstone, M.P.; Mr. Cecil Harmsworth, M.P.; Mr. D. T. Holmes, M.P.; Mr. Hedley F. Le Bas, Caxton Publishing Company; Mr. H. J. Mackinder, M.P.; Mr. H. J. May, secretary to Parliamentary Committee of the Co-operative Congress; Mr. C. T. Needham, M.P.; and Mr. W. Tyson Wilson, M.P.

In November some improvement has occurred in the foreign trade situation. Nevertheless, the extent of the improvement needs to be very much greater and much more rapid in future than it has been hitherto. Roughly speaking, the country needs to reduce its imports by about £15,000,000 a month, and to increase its exports by £10,000,000 a month in order to meet its foreign payments, and to honour

the credits it is granting its Allies and the Colonies. And after this rectification of the foreign trade balance has been brought about it will still be necessary for the country to sell from week to week large amounts of securities, and to borrow substantial sums abroad. In fact, the situation demands that we should meet our great war expenses, including loans to our Allies and the Colonies, in every feasible manner by working harder and more efficiently, by greater economy by all classes, including the working classes, and by selling those of our securities that can be sold.

Our Colonies realise the greatness of the task before us, and are also willing to do everything within their power to assist us both in men and money. The Canadian Government Loan for 50 million dollars has been subscribed twice over, and the Government is understood to have decided to accept the whole of the subscriptions, so that Canada has already provided herself with £20,000,000 of the money she will require for War purposes. Again, Australia is raising at home all the money she is capable of providing for War purposes. As every member of the British Empire, capitalists and workmen, men and women alike, are desirous of doing everything within their power, no one can doubt that all the economy essential will be effected, and that all the great sums of money required for the successful conduct of the War will be forthcoming. The awakening of all classes to the financial needs of the country, clearly indicated by the events that follow one upon the other from day to day, shows that, just as in 1915 when every penny of the vast sums of money needed for the War have been supplied, in 1916 the still greater sums that will then be necessary will be forthcoming.

HOME RAILWAY YIELDS.

Home Railway stocks have been out of favour with the public for some time past, and a further considerable decline in prices has taken place. As a clue to the movement that has occurred and the higher yield that is now afforded we contrast prices of about April 1, and yields based on dividends of the whole of 1914, with present prices and yields on the dividends of the twelve months to June 30, 1915. In respect of Deferred stocks there is an unknown quantity, and we do not attempt any showing of the yield, as it cannot be indicated until the results of the December half of 1915 are known. Still, the table gives an approximate idea of the great change that has come over the market:—

	Yield April 1, 1915, on —Dividends of 1914—, Yield					Yield Dec. 1915, on —1914-15 Dividends—, Yield

THE GREEK KING AND THE GREEK STATESMAN.

Our readers have, no doubt, carefully perused the report of the interview granted on Monday last to a newspaper correspondent by the Greek King. It is an exceedingly interesting human document as well as a valuable State paper. The King stated in strong language that he had been disappointed and grieved at the criticism to which he had been subjected in England; that, as a matter of fact, he preferred England to all other foreign countries; but that he is King of Greece, and, besides, was actually born in the country; that, therefore, as the supreme ruler and a native-born Greek, his first duties are to Greece. The matter is put exceedingly neatly, and everybody must admit that it carries great weight with it. We have, however, no desire to criticise the statement. In the first place, we think that a large proportion of the British Press is unfair in its criticism of neutral and hostile nations; and, in the second place, we hold that the British people are strong enough, and are confident enough of their own rightful conduct throughout this War, to avoid the contemptible—for it often is contemptible—tone in which enemies are spoken of. The Governments of the Entente Allies have all, without exception, pledged themselves to put down Prussian militarism, to punish the guilty for the crimes committed against Belgium, Serbia, and other downtrodden nations, and not to make peace without common approval, no one of them entering into negotiations with the enemy separately. All this ought to be quite enough for a proud and a self-respecting people, and any tittle-tattle, mean suspicions, and unfounded charges lower us in the eyes of the world instead of raising us. But while we avoid all partisan criticism of King Constantine's statement, we point to it as proof of the immense influence which fear exercises in the political world to-day as well as in the past. Furthermore, we refer to it as showing that the Kaiser and his advisers, from their own low and inhuman standpoint, did not count wrongly when they anticipated that their treatment of Belgium and of the occupied portions of France would strike terror into the hearts of the small nations. The world does not recognise that fear is the strongest of all human passions; and especially the members of our own Government have not sufficient knowledge of human nature to recognise that not only is such the case, but that it was their bounden duty, as the greatest of the Allies, to take measures to inspire confidence into the small nations. We have singled out our own Government because the British Empire is the largest and the greatest the world has ever seen; because it could put in the field forces sufficient to crush the two Central European Empires in a very few months; and because it is showing that it disposes of wealth almost unimaginable. But we should be sorry to confine our comment to our own Government. It is perfectly clear that all the Governments of the Entente Allies misunderstood the situation, and did not take the right measures to ensure that, as they were fighting the battles of the small nations, so it was their duty to gather the small nations round them and put them in a position to deserve the protection that was being extended to them.

In contrast with the interview granted by King Constantine, there was published in all the papers on Tuesday morning an address by M. Venezelos to his constituents. We are very great admirers of M. Venezelos, and we have hitherto found little in his conduct to pick holes in. But we confess that this address to his constituents disappoints us. Greece is offered an opportunity to become great which, in all human probability, will never recur. She is an aspirant for the islands of the Mediterranean Sea. So is Italy. Italy is fighting gallantly against the common enemy. And the King of Greece prevents

his people from taking action that would promise, at all events, to fulfil their aspirations. Furthermore, Greece has been offered one great island which would be handed over to her without firing a shot or paying a penny. And she has preferred to remain neutral. She has thrown back in the face of England the gift proffered. Moreover, M. Venezelos himself has been treated with a contumely which few men would have the self-control to submit to quietly. Yet M. Venezelos now tells his fellow countrymen that the party which follows him blindly is resolved not to stand at the present elections because, forsooth, the elections are unconstitutional, and, even in this Day of Fate, M. Venezelos will not by any act of his seem to countenance unconstitutional conduct. He may be perfectly right. He has hitherto rescued Greece from difficulties that seemed overwhelming. He has even compelled the King, after dismissing him, to recall him to his councils. He may prove once more that he is the leader of the vast majority of the people in Greece, and that he knows that he is acting in a manner to win the great victory which he sees before him. All that is quite possible. We do not in the least aspire to the rôle of prophet. We do not in the least pretend to know more of Greece than does M. Venezelos. But we do not believe that a great people ever was rescued from a most formidable difficulty by throwing up the sponge and allowing the adversary to play his part as he pleases. It was not by conduct of that kind that Thermopylæ has been celebrated for thousands of years. Nor was it by such conduct that Salamis was won. It is not for foreign journalists to lecture the leaders of a free people and tell them what they ought to do. We are merely expressing our own disappointment, which may turn out to be no more than our own ignorance. But we frankly confess that the withdrawal in such a crisis of M. Venezelos seems to us unworthy of a great statesman and likely to severely injure the cause of Greece. When things are brought to the worst pass and a country stands face to face with the gravest dangers, it appears to us that it is the duty of every good citizen to throw aside parliamentary platitudes and constitutional inanities, and to stand forward in the gap to defend the country as best it may be defended. Clearly the Greek King has, for the time, at all events, matters in his own hands, and can disregard constitutional opposition. It remains to be seen whether the Entente Allies will bring together a force sufficiently strong to convince the Balkan States that on their side victory lies. If they do not, the German kings of the Balkans evidently have the power to do as they like with their States.

PRESIDENT WILSON'S MESSAGE.

President Wilson has endeavoured as straightforwardly and as patiently as any man could do to observe a rigid neutrality between the belligerents in the present great War. Sometimes, indeed he has been accused by a wing of his critics of yielding too much to German arrogance and taking advantage of British friendliness. We do not make the charge ourselves. We think it is quite undeserved. But we remind our readers of it on this occasion because it shows how the most painstaking efforts to observe an honest neutrality utterly fail. There is in the United States a very large proportion of Germans, very many of them born in Germany, but now naturalised citizens of the United States. A larger number still are of German descent. A very considerable proportion, it is said, of the native-born Germans are now using their rights as American citizens to involve the United States in hostilities with other Powers; to set its laws at defiance; and to undo the carefully adopted policy of the country. The President speaks strongly in his Message, but not too strongly, for it is, indeed, a very grave thing to find enriched men taking advantage of the great privileges bestowed by a free Republic to defeat the policy of that Republic and to involve it in hostilities which it wishes to avoid. It is not surprising, then, to find that the President is obliged to announce that such a state of things cannot continue. Up to now the good sense and the great privileges enjoyed by naturalised citizens of the United States had constrained them to hold back exuberant sympathy for their native countries, and to bow to the laws of the United States. But now it is found that no laws sufficiently restrictive exist; and, therefore, that such laws must be proposed. As a matter of course they will be passed. But whether they will be found stringent enough to restrain the evil-doers is a question that can be decided only by experience. All Liberals in every country are liable to make one grave mistake. Their faith in freedom is so great that they forget there are men whose passions are stronger than their reason, and whose sympathies, once aroused, run away with their judgment. In the United States, Germans whose sympathy with the country of their birth or of their descent is stronger than their sense of duty, look around them and see that so large a proportion of the whole population of the United States is, partially at least, of German descent that they forget the restraining influence of judgment and of duty, and jump to the conclusion that if only the whole of the German-Americans can be sufficiently aroused the President's policy will be defeated, and the United States will be compelled, if not to assist, at all events to wink at assistance being given to the two Central European Empires. It is a kind of reasoning which is to be found at all times and in all countries among persons whose sympathies are strongly aroused. And it is to be feared that President Wilson will find, if the War lasts long, that he will have to resort to much stronger restrictive measures than he now thinks of proposing.

Probably if the facts could be ascertained the number of law-breaking Germans in the United States is not very great. Of course, it is to be borne in mind that nationality is an exceedingly strong feeling. It is curious, considering its strength at present, how comparatively novel the feeling is. Up to about a hundred years ago, or little more, nationality seemed to exercise little or no influence upon human conduct. Even members of the same State were often ready to join with foreigners to put down a section of their own fellow-citizens. But during the course of the nineteenth century the nationality idea grew in prevalence and in strength to such an extent that it moulded largely the map of Europe. And at the present time everything seems to point to the conclusion that the strength of the nationality idea is increasing and will have greater effect upon the map of the world than at present is widely believed. Moreover, it is never to be forgotten that Germany, as it now exists, was the outcome of the nationality idea. The sufferings of Germany during the great Revolutionary wars and the Napoleonic wars were such that a longing grew up for a union amongst all speakers of German. The result was that Prussia was adopted as the one Power most likely to build up the longed-for new Empire. And Prussia has succeeded. There is, therefore, not only the general strength of the nationality idea, but there is the approbation given by experience to that idea to strengthen its influence in Germany. Lastly, all the German Governments, from the Imperial down, make it their business to inculcate in every teaching establishment the theory that the State is superior to all other institutions; that it is above all laws for it has no superiors, and law requires superiors to enforce it. Therefore, the teaching of Germany, from the highest universities down to the lowest schools, has been that the State is above all law; that it is a law to itself; and that every citizen subject to the State is bound to obey its laws whatever they may be. Consequently, we have to bear in mind under all circumstances that

Germans who emigrate carry with them the principles which have been instilled into them during their educational years. They never doubt the truth of those principles; and very many of them are ready to act upon them on all favourable occasions. Owing to this President Wilson will find the task before him an exceedingly difficult one. He will find that the worship of the State is very like the worship of different religions by different bodies; that the Germans will hold that as Germans their first duty is to the State which gave them birth and gave them education, and that whatever other law interferes is an unjust law to be set at defiance. It will be in the estimation of German-Americans an attempt to break down German belief in Germany and Germany's teaching, and they will offer to it, it is to be feared, an extremely strong opposition.

The President has discovered that not only is the United States not provided with laws to meet the present grave emergency, but that there are multitudes of dangers emerging which are entirely unprovided for. For example, he points, amongst other things, to the Monroe Doctrine. Since the days of President Monroe, that doctrine has been one of the guiding principles of all American Administrations. And of recent years it has been pushed farther than ever before. President Wilson points out, furthermore, that in the case of Mexico he has extended it to the utmost limit; that, contrary to the opinion of many of his own fellow-citizens, he allowed Mexico to welter in all kinds of lawlessness in the hope that she would work out her own salvation. Apparently he is doubtful whether the result would be quite so favourable as for a long time he trusted it would be. But however that may be, he still does not repent of the policy he pursued, and he still is able to point to his policy in Mexico as proof that the Monroe Doctrine not only is a doctrine of impartiality on the part of the United States, but that it is a beneficent policy so far as other American States are concerned, since it allows them, if they cannot settle their own differences in any other way, to fight them out. But even that policy, strongly as he holds to it, and determined as he is to defend his own policy, he feels required to be backed up. And in the Congress which he was addressing he is determined to bring forward a large number of Bills to strengthen the hands of the Government in regard to lawless men who would attempt to defeat its policy, and, likewise, to provide the Government with means of carrying out incidental policies which he believes to be good, not only for the United States, but for the whole American continent. Therefore it is probable that we shall see a very busy Congress at work. It is to be recollected that the existing Congress will come to an end next year, or rather in the following March. But the election of a new Congress and a new President will take place in November next. And whatever policy the present Administration has to complete must be fortified by such legislation as is requisite before November next. There will be a short Session of Congress beginning in December and ending at noon on the 4th of the following March. If the elections are favourable to the existing Administration, it, no doubt, will be able to carry what further laws it may require. But if the elections are not favourable, then the policy of the existing Administration will have to rest upon whatever laws are in existence at the close of the present Session of Congress.

USEFUL AND MISCHIEVOUS CRITICISM.

A portion of the Press, which rumour asserts has lost very heavily by the War, and is, in consequence, fishing in troubled waters in the hope of attracting stray coppers, is continuing that mischievous kind of criticism which is alarming the weak-nerved part of the public and is inspiring the enemy with confidence. For example, we have, as the week is drawing to a close, an outburst of censure upon the Government, firstly, for having muddled the negotiations with the Balkan States; secondly, for not having foreseen the action of Bulgaria; thirdly, for not having been prepared to counter that action immediately; and, fourthly, because as yet the Central European Empires, the Turks, and the Bulgars are superior in numbers, are over-running Serbia, and are compelling the Entente Allies to retreat. We cannot conceive any kind of criticism more mischievous at the present time. In the first place, the British Government alone is not responsible. It is one of a large number of Allies. It has to work as amicably and as agreeably with the other Allies as it can. And, so far as the world knows, there has never been any real agreement between the Allied Governments as to the steps that ought to have been taken in the Balkans. There were very strong reasons indeed why an attempt should be made to open the Dardanelles. One was that in some countries, when the War broke out, the crops were a complete failure, while the closing of the Dardanelles prevented Russia from selling to Western Europe her magnificent crop. Thus an artificial shortness of food was created, and a real requirement brought into existence for some effectual action to be taken. Whether the action taken was the best possible under the circumstances, or whether the various Allies were willing to agree to any alternative action, the public at large is utterly ignorant. If things had been normal—if, for example, the Manchurian war had never taken place—Russia would have been in a very much better condition than she was to deal with her enemies. Or if Russia had thrown herself with heart and soul, as soon as the Manchurian war ended, to reorganise her army and reconstitute her fleet, things also might have been very different. As it was, the whole world knew—Russia herself did not even attempt to deny—that she had not finished the reorganisation and reconstitution of her armies and her fleets, and that, therefore, she was not prepared for a great war. The facts being so, none of us are in a position to even guess why the course actually adopted was taken in regard to the Dardanelles. Furthermore, Russia has for nearly two centuries been the patroness of the Balkan States. She spent in rescuing them from slavery both blood and treasure in immense amounts. And therefore she had the first and clearly the most powerful voice to decide how the Balkan States ought to be dealt with. We cannot, any of us, tell what line Russia advised or what course France and England adopted before they decided upon the attempt to open the Dardanelles by ships alone. Is it, therefore, either common-sense or common loyalty to the State to try to fix blame upon the British Government—whether it be the original Government that entered into the War or the present Coalition Government makes no difference; the British Government, however constituted—when we know that it was its duty to act as far as it could in harmony with France, Russia and Italy, and to do nothing that might create, we will not say displeasure, but even disappointment, in the minds of any of the other Governments? The time will come when the conduct of the War will have to be reviewed and criticised. If serious errors have been made, those who committed them will be censured, and will be held up to posterity as unfit for the great places they occupied. But until we have proof that grievous errors were committed our plain duty is to assume that among a great number of Governments there were sure to be differences of opinion, and when no one Government was so manifestly superior to all the others in wealth, in numbers, in actual armies fit to send into the field, and in preparation to command what should be done, it is little short of treason to try to stir up dissatisfaction in the country. Our duty at present—all of us, old and young, rich and poor—is to criticise respectfully, reasonably, and with full recognition of all the difficulties ahead, what we believe to be wanting in the conduct of our rulers; to

urge them to act faithfully upon the new policy, the policy which pledges all the Allies to agree upon a fixed course of action; and to carry that out to the utmost of their power. The new policy is only a few weeks old. One cannot call into existence armies and navies and transport them from one side of the world to the other in a few weeks. Time must be given for the new policy to work. The Government should be made to understand, not by nagging, or bullying, or sowing apprehensions in the minds of the weak, but by honest and well-reasoned argument, that the country expects not only its own Government, but the Governments of the Allies altogether, to act in accordance with their new agreement; to carefully study the situation as it exists; to take the measures necessary to lead to a successful termination of the War; and to call upon the public to support them to the very utmost in whatsoever is adopted by all.

THE TRADE BALANCE.

THE most satisfactory feature about our foreign trade in November was the increase in the value of the exports of British goods to the highest level attained since war began, the amount reaching £35,639,000 in comparison with £24,602,000 in November last year and £44,756,000 in November 1913. Of course we must not attach too much importance to one month's trade, for in the previous month of October the value was less than £32,000,000. Nevertheless, the fact that the value has broken a new record since war began is a hopeful sign that our export trade next year will show substantial expansion over its value in the current year if strenuous efforts are made to promote exports and all unnecessary impediments to expansion are removed. If the level in November could be maintained for twelve months the value of British exports would exceed £430,000,000, against an actual export in the past twelve months of £377,000,000. There is, fortunately, no difficulty in selling our goods abroad, for the demand for many of them is much greater than we can at present supply. The difficulty lies with the shortage of labour and the shortage of tonnage, as well as with other factors which practical people assert are unnecessarily hampering our export trade and which improved organisation and greater co-ordination might remove. If anything could be done to increase the efficiency of labour by improved methods of production or otherwise, or to increase the quantity of shipping available for our trade, or to set free more machinery for production of goods for export, a very substantial expansion in our export trade would be witnessed.

Our imports in November were about the monthly average of the current year, having reached £71,647,000 in value, against £55,518,000 last year and £68,467,000 two years ago. For the past twelve months the value of our imports has been £850,000,000—by far the greatest aggregate ever hitherto reached. It compares with only £696,000,000 in the calendar year 1914 and £769,000,000 in 1913.

Our re-exports in November were valued at £8,313,000, against £5,643,000 last year and £8,001,000 two years ago. For the last twelve months our re-exports have been £97,000,000 in value, against £95,000,000 in 1914 and £110,000,000 in 1913. Hence our net imports reached the great sum of £753,000,000 in the last twelve months, in comparison with £601,000,000 in 1914 and £659,000,000 in 1913.

For the month of November the excess of imports over exports was £27,695,000, making a total excess for the past twelve months of £376,000,000, against an excess in the calendar year of 1914 of £170,000,000 and an excess in 1913 of only £134,000,000.

It is now evident that for the calendar year 1915 the excess of imports over exports will be in the neighbourhood of £370,000,000.

For the purpose of showing the greatness of our imports and the relative smallness of our exports in the current eleven months, in comparison with the corresponding values last year and in 1913, we give the following contrast:—

Trade of the United Kingdom, Eleven months.
000 omitted.

	1915	1914	1913	Inc. or Dec. Compared with 1913
	£	£	£	£
Imports	782,941	629,254	697,920	+ 85,021
Re-exports ..	91,095	89,619	99,927	— 8,832
Net imports ..	691,846	539,635	597,993	+ 93,853
Exports of British goods	350,700	403,952	482,134	— 131,434
Excess of imports ..	341,146	135,683	115,859	+225,287

The trade balance for the whole of 1915 in comparison with the balances of 1914 and 1913 is approximately as follows:—

Excess of Imports over Exports, Twelve months.
000 omitted.

	1915	1914	1913	Increase on 1913
	£	£	£	£
11 months ..	341,146	135,683	115,859	+225,287
December ..	27,696*	35,167	18,060	+ 9,636
12 months ..	368,842	170,850	133,919	+234,923

* As in November.

If we could maintain our exports in future at nearly £36,000,000 a month and refrain from purchasing from abroad on balance goods of a greater value than £63,000,000, as in November, the excess of imports over exports for twelve months will be at the rate of £332,000,000, against an actual excess for 1915 of nearly £370,000,000. But before we can be certain that the improvement in the trade balance is permanent we must await further results. It is, however, of very great importance that everything possible should be done to render the improvement permanent and to cause the trade balance against us to fall to a very much smaller figure even than £332,000,000.

Beyond the adverse balance as shown by the trade returns we must of course take into account the large quantity of stores and supplies which the Government has imported during the past twelve months, and which do not figure in the trade returns.

How great this has been it is very difficult to calculate, as some of the Government stores imported are in the foreign trade accounts and some of them are not. Thus it is known that our imports of horses from abroad during the current year reached a very large figure, but the number returned as imported is only 8,000, or less than in 1913. Again, it is understood that we have imported large quantities of explosives of various kinds. The foreign trade returns contain no record of them whatever. On the other hand the orders that are known to have been placed abroad for goods of all kinds and descriptions are no guide to the actual deliveries, for it is understood that foreign and colonial manufacturers have experienced as much delay in completing orders as have our home manufacturers. Then, beyond the goods brought to this country in Government ships or on Government account many are sent direct from the producing countries to the lands in which the British armies are situated. Lastly, a good deal of money has to be remitted to our expeditionary forces for goods and services supplied locally. The available information upon all these points caused us to calculate that our invisible imports in the first year of war were in the neighbourhood of £10,000,000 a month, and that since that date they had been at the rate of about £20,000,000 a month. Having regard, however, to the delays in the delivery of goods ordered

abroad we have come to the conclusion that the value of our invisible imports for the calendar year 1915 has not exceeded £10,000,000 a month, and that for the whole twelve months the excess of our imports over our exports has been rather less than £500,000,000.

From this sum has now to be deducted our income from interest on capital invested abroad, shipping, and other services. At the beginning of the War there was serious danger that our income from capital invested abroad would show heavy decline, but the great prosperity that has come to all the young countries in which the greater part of our foreign capital is invested has removed this danger. It is true that certain of our investments in Mexico, in Brazil, and in the United States have not given their normal income, but the aggregate loss of income has not been a great matter. Beyond the loss of income arising from funding and similar operations, we have to allow for the reduction in our income due to our withdrawal of floating capital from other countries. It is true that, against the loss of interest which this has imposed upon us, must be placed the gain from our additional investments in France, in Russia, in Italy, and elsewhere; but during the War we shall probably take our interest on these new investments in additional securities, and consequently we cannot calculate the receipt of actual income from them. After making ample allowance for all these factors, we feel justified in calculating that our income from interest on British capital invested abroad has fallen only from about £200,000,000 before the War to about £175,000,000 per annum in the past year. On the other hand, our income from shipping has increased enormously. Exactly how much of our shipping has been employed at the high rates it is difficult to ascertain. The amount of shipping permanently taken over by the Government is understood to be about 25%, but beyond this the Government charters additional boats as it needs them, and some calculations place the amount of shipping taken up by the Government at about 50% of the total tonnage. If, however, the foreign trade returns may be regarded as a guide to the reduction in the quantity of British shipping available for commerce the reduction has been less than 50%. In the eleven months the tonnage of British shipping entered with cargoes was 21,000,000, in comparison with 29,500,000 in the corresponding period of 1913, a reduction of about 8,500,000 tons, or about 29%. The quantity of British shipping cleared with cargoes, however, has been only 18,787,000 tons in the eleven months, against 36,815,000 tons in the corresponding period of 1913, and here the reduction is nearly 50%. It is possible that the reduction in British shipping in the foreign trade is greater than these figures indicate, as efforts have been made to prevent British ships from plying between foreign countries to the injury of British trade. After taking all these various considerations into account, the very high freight rates now received, and the reduction in passenger traffic, we have come to the conclusion that our income from shipping has risen from a sum of about £100,000,000 a year prior to the War to something like £225,000,000 per annum during the past year, and that the income we are getting from our foreign investments and from our shipping is now yielding an annual sum of about £400,000,000 in place of a normal £300,000,000. The other income we derive from miscellaneous services of all kinds and descriptions performed for foreign countries has probably fallen. For instance, the Stock Exchange, which usually derives a very large income from foreign business, is at present earning practically nothing from this source. Further, the number of foreign visitors to England has been very greatly reduced, and although, on the other hand, English touring abroad has also practically ceased on balance our income has probably suffered on balance. Nevertheless, having regard to the income our bankers derive from their services to foreign and Colonial countries, to the substantial sums paid in this country for offices, directors' fees, clerical staffs, &c., by foreign and Colonial companies, to the commission gained on re-exports, and to the income which our fire and other insurance offices obtain from foreign countries, it is evident that our income from services other than interest on capital and shipping has not fallen below £25,000,000. Hence in the aggregate we calculate that what are termed our invisible exports have brought the country an income of something like £425,000,000 in the current year.

Thus, against our excess of imports over exports of some £490,000,000 we have credits for about £425,000,000, and the amount that has had to be provided by sales of securities or by exports of gold to meet this adverse balance has not been more than £65,000,000. Beyond this sum, however, we have had to find loans of money for our Allies and Colonies. Exactly how much this has been is unknown. The Bank of England in July was repaid £160,000,000 of the money it advanced to the Government, and presumably a large part of this money consisted of loans which the country had made to Allies and Colonies. Then, again, Mr. Asquith in November told us that the Government had repaid to the Bank of England another £104,000,000, and that beyond this £58,900,000 had been lent to the Allies and £39,400,000 to the Dominions. Thus the repayments to the Bank of England altogether up to November 6 amounted to £264,000,000, while the loans to the Allies and Dominions were nearly £100,000,000, making a total of a little over £360,000,000. A part of this money was for other purposes than for loans to Allies and Colonies, but the greater part of the money was for that object. Then beyond the sums that the Government has lent to other countries is the money that has been lent by private investors which for the eleven months has amounted to £51,000,000, excluding the investment of new money in connection with the recent French Loan. If we assume that a substantial part of the money advanced by the Bank of England to the Government was not in connection with loans to Allies and Colonies, it is still evident that the capital we have supplied to foreign and Colonial countries in the current year has exceeded £300,000,000, and that for the whole twelve months the country has had to find in one way or another on balance about £400,000,000 of money for the purpose of paying for the goods it has bought from abroad and making loans to our Allies, Colonies, and customers.

This large sum of money has been found in part by drawing in floating capital from abroad, which has been possible as business throughout the world is to-day being conducted on a cash basis in a manner that has not been witnessed for a great many years, and as much of the money that we usually employ in financing international commerce is therefore no longer needed for the purpose. Again, we have supplied ourselves with a part of the money by selling some of our investments in the United States. The amount of these sales, we believe, is much less than currently assumed, and the balance of the money has been found, first, by means of the British loan of £50,000,000 and by the new bankers' credits in the United States, and, secondly, by the export of gold. The amount of gold imported into the United States since the beginning of the year has been about £80,000,000, but a large part of this has been provided out of the new gold raised in South Africa, Australia, India, and elsewhere, and a substantial amount of it has been supplied by the banks of France and of Russia. The net loss of gold by this country since the beginning of the year has not been as great as was the amount of gold it received from abroad in the first few months of war, and on balance the stock of gold in Great Britain is probably greater than it was before the War started.

This is the situation of the foreign trade balance

in the year 1915. In considering the foreign trade balance at any given moment, however, it is usual to calculate the existing monthly rate in favour or against any country. The current monthly rate of loans to foreign countries and our Colonies is now greater than it was early in the year, and, moreover, our imports of Government stores and munitions are still expanding. Hence the amount of money to be found from month to month, to pay for our balance of imports, including Government stores, and to make loans to our Allies and Colonies, is much heavier than the rate at which we have had to find money for these purposes in the last twelve months, and it is evident that in order to meet this larger trade balance the country not only needs to mobilise the securities it can sell abroad, but also to keep down its imports and to cause its exports to show still greater recovery both by economy and by greater efficiency.

THE COST OF LIVING.

OUR INDEX-NUMBERS OF PRICES.

(In continuation of Sauerbeck's Figures.)

THE following are THE STATIST'S index-numbers of the prices of 45 commodities, the average for the 11 years 1867-77 being 100:—

Annual Numbers.

Period	Average
1825	117
1873	111
1878-87	79
1890-99	66
1905-14	79
1880	88
1896	61
1905	72
1906	77
1907	80
1908	73
1909	74
1910	78
1911	80
1912	85
1913	85
1914	86

Monthly Numbers.

Month	Index-No.
June 1914	81.2
July 1914	82.4
August 1914	87.9
September 1914 ...	89.3
October 1914 ...	89.8
November 1914 ...	88.8
December 1914 ...	91.6
January 1915 ...	96.4
February 1915 ...	100.9
March 1915	103.7
April 1915	105.9
May 1915	107.2
June and July 1915...	106.4
August 1915	107.0
September 1915 ...	107.8
October 1915 ...	110.0
November 1915 ...	113.1

The advance in prices continues, and our index-number has now risen to 113.1, showing a further rise of 3.1, or nearly 3% in November, and a rise of 39.3% since June 1914. In some measure the rise in prices in November was accidental. There is an abundance of cereal food in the world this year, the crops being very large, and the supply of wheat in particular is plentiful, nevertheless, there has been a substantial advance in the price of wheat. This has been due, in part at any rate, to a sudden and heavy demand for Canadian wheat, which caused a maximum amount of disturbance to the wheat market. The index-number of all vegetable foods has consequently risen nearly 3%. The prices of animal foods have further declined 2.4%, making a total decline in the index-number of over 8% since August. The prices of sugar and coffee have slightly advanced, but tea is somewhat cheaper. Prices of practically all materials have advanced. The rise in minerals for the month is 5.7%, in textiles 4.5%, and in sundries 3.9%.

Comparison of the prices of the various classes last month with previous periods is made below:—

	Veg. Food (Corn, &c.)	Animal Food (Meat & Butter)	Sugar, Coffee & Tea	Minerals	Textiles	Sundries	Total
Year 1873 ...	**106**	**109**	**106**	**141**	**103**	**106**	**111**

In the aggregate the price of food is only slightly higher, while the index-number for materials has advanced 4.6%. Since war began the rise in foodstuffs has been 42.4%, and in materials 37.7%.

Taking articles of food and materials separately, the index-numbers for last month compare thus (1866-77=100 in both cases):—

	Foodstuffs	Materials		Foodstuffs	Materials
Year 1873 ...	**107**	**114**	June 1915 ...	105.8	106.9
Aver. 1878-87 ...	84	76	July „ ...	107.7	105.5

May 1915 ...	111.1	104.3	Do. last 17 mos.	+42.4	+ 37.7

A substantial advance has occurred in the price of silver, bringing the quotation to 27$\frac{3}{16}$*d.* This rise was due to the discovery that the stock of silver in London had fallen to a very low figure, that the demand was exceeding the supply, and that there were prospects of continuance of a good demand for the Continent, and possibly for the East, with relatively short supplies from the United States and Mexico.

The price and index-number of silver for last month compare as follows (60.84*d.* per oz. being the parity of 1 gold to 15½ silver=100):—

	Price *d.*	Index-No.	End of	Price *d.*	Index-No.
Average 1873 ...	59¼	= 97.4	Dec. 1906 ...	32$\frac{5}{16}$	= 53.1
Average 1890-99	34	= 55.8	June 1914 ...	26	= 42.7
Average 1905-14	26$\frac{11}{16}$	= 43.9	Oct. 1914 ...	22$\frac{3}{16}$	= 36.5
Average 1893 ...	35$\frac{5}{8}$	= 58.6	Dec. 1914 ...	22$\frac{11}{16}$	= 37.3
Average 1909 ...	23$\frac{11}{16}$	= 38.9	Sept. 1915 ...	23$\frac{3}{4}$	= 39.0
Average 1914 ...	25$\frac{1}{16}$	= 41.6	Oct. 1915 ...	24$\frac{1}{16}$	= 39.6
Lowest, Nov. 1902	21$\frac{1}{16}$	= 35.6	Nov. 1915 ...	27$\frac{3}{16}$	= 44.7

Gold has continued to be exported on a considerable scale, notwithstanding the creation of substantial credits in the United States, and the aggregate export for the month has reached £13,554,000. On the other hand the imports of gold have been £6,530,000. Therefore on balance over £7,000,000 of gold has been exported. The stock of gold in the Bank of England at the end of November was still about £51,000,000, against £40,000,000 prior to the outbreak of war.

VENEZUELA CENTRAL RAILWAY.

THE progress of the Venezuela Central Railway Company has received a check. The exceptional causes arising from the War, added to the plague of locusts and the heavy rains experienced, are the main reasons for the set-back. The report for the year 1914, recently issued, showed that the gross earnings declined from £29,531 to £24,673, and the net earnings from £10,786 to £5,123. Such a sum is insufficient by about £9,000 to pay the 6% interest on the First Debentures, and an arrangement has been come to whereby stockholders have agreed to receive as and from October 1, 1915, reduced interest at the rate of 3% per annum, or more should the net earnings of the railway warrant it, but not to exceed 6% per annum, and that as soon as the full 6% has been paid for three consecutive years, then the full amount of 6% per annum should be thereafter payable. The first section of the line was only opened in January 1911, and a further extension in November 1913, and until war broke out fair progress was shown. The railway is now 73 kilometres in length extending from Caracas as far as Yare, and whilst further extensions are contemplated, it is considered inadvisible to proceed beyond Yare at present owing to the high cost of fuel and other circumstances caused by the War. It is satisfactory to note that the recovery in earnings has now set in and for the first nine months of the current year the improvement is £2,771 or 14.7%.

For over a Century the Claims paid under Whole-life Policies have, on the average, been more than

Doubled

in amount by addition of Bonuses.

Financial Notes.

JUST now the position in Argentina is very interesting, and those whose connection with the country is at all large or valuable will do well to watch the course of events. Argentina, as everybody knows, has been selling to the Entente Powers on an immense scale. In consequence, her most pressing difficulties have been removed, and not a few have jumped to the conclusion that the present season would see the end of those difficulties, and usher in a more promising, as well as a more satisfactory, situation. There is, of course, much force in the argument, and doubtless Argentina will profit if hostilities continue. But in attempting to measure the importance of those advantages it will be well to keep in mind three very serious considerations.

In the first place, Argentina had fine crops last year, which the world was eager to buy almost at the country's own prices. The British Government, in particular, bought on an immense scale, not only for its own subjects, but for its Allies. On the other hand, last year the harvest of Australia was a failure. It was an exceedingly bad year for the island continent. We are glad to say the present year has seen the reverse of the medal, and Australia will be once more a competitor, which is a matter of great importance not to the island continent alone, nor to the British Empire alone, but to the food consumers of all the world. Reasonably we ought, in consequence of this, to be able to obtain our food supplies somewhat more cheaply. Particularly there ought to be a marked cheapening if the Entente Allies at last have awakened from the mistaken policy that bound them so strangely in regard to the Dardanelles and the Balkans, and are now taking measures which will give access to Russia.

In the second place, it is understood that the British Government is now confining its purchases for itself, for the Daughter Countries, and for its Allies, as far as circumstances permit, to the countries within the Empire. The policy is a wise one. It will be in the recollection of our readers that it was begun last year, when, through the Indian Government, purchases were made of nearly all the saleable wheat in India. The price was thereby kept at a very reasonable level so far as the Indian sellers were concerned, and it was also kept at a reasonable level so far as those for whom the British Government was acting were concerned. Satisfied with the result of last year's experience in India, the Government now is extending its policy very considerably. That will help, we trust, to enable the Empire to bear the costs of the War better than it otherwise could. It will give to the Empire a full market for all its products, and it will give such a reasonable price as will afford a handsome profit to the sellers and yet not press unduly upon the buyers.

In the third place, the British Government is confining shipments as far as possible, if we are rightly informed, to British shipping, which naturally has the result of keeping up British freights. But it makes exceptions where foreign vessels obtain from it special permission. In those cases we are informed that the price is raised. It seems rather surprising that it should be so, but we presume, as the British Government only grants permission in special cases, that where the special cases occur the freights are advanced, as naturally would be the case supposing that such shipping had been excluded altogether and now is admitted into the competition on special terms. In any event, the whole combination of circumstances tends to lessen the imports of all kinds of produce from Argentina to the United Kingdom, and to increase from other quarters the imports of those productions into the British Empire. It is the converse of a policy which is very desirable in the general interests of the Empire. Since hostilities began this country has been buying immensely increased quantities, especially of things intended for the War. That must go on as long as hostilities continue. And when the decisive fighting begins, as presumably it will begin in early spring, the consumption of all kinds of munitions must be on an enormous scale; and the imports from abroad continue excessive.

Therefore it is in the highest degree desirable that the exports from the United Kingdom should be stimulated by every legitimate means. Clearly, the taxation of the country will yield higher if the exports are inflated than if the exports are kept down. We are aware, of course, that in the past month there has been an improvement in the exports; but there has also been an increase in the imports. What we want to see is a much more marked increase in the exports. It is worth the attention of our Government to give thought and study to this matter. The exports of the country can be augmented greatly if the proper steps are taken. Manifestly, if the exports are largely increased they will enable the public to subscribe more handsomely to the War Loans and to pay increased taxes with much more ease to themselves than any of the wild schemes so freely put forward for ending the War successfully can be.

There has been some talk of locusts in Argentina already, and we believe that, as a matter of fact, some damage has been done in Cordoba. But up to the present we have heard of no indications that the damage has been serious or is likely to become so. Of course, it is to be recollected that while the wheat harvest is being gathered in and is proving a fine one, the maize crop is still in an early stage. It is soft and green, and is very attractive to the locusts. It is not surprising, therefore, to learn that locusts have

made their appearance already. But there are very few seasons in which one does not hear of some damage being done by locusts. If the neighbouring South American Governments would combine to drain the districts where locusts are bred no doubt the pest could be put an end to. But while there is no Government that has sufficient foresight to take the measures necessary to put an end to the destruction of wealth we are afraid that the locusts will continue to pester farmers in Argentina. The time is not far past when it was believed Havana, and a very large part of Cuba as well, was hopelessly handed over by Providence to pestilence. Yet the short time the Americans occupied the island enabled them to show that the belief was a pure prejudice—that science can very easily get rid of yellow fever. In the same way, locusts can be got rid of whenever the breeding-places are attacked in earnest and the right measures are adopted to get rid of the pest.

It may be added in support of the statement just made that when the British first became acquainted with Uganda they were convinced that the tsetse fly was invincible, and that, whatever steps might be taken, it would continue to poison man. Doctors, however, had more faith in science than politicians, and although by no means enough has been done, yet sufficient measures have been taken to prove conclusively that the tsetse fly, just like yellow fever in Havana, is due to the neglect of Governments and their agents.

There is no more deserving object of support than the Soldiers' and Sailors' Free Buffet at Victoria Station. Thousands of our fighting men are supplied daily by willing and voluntary hands with meals and comforts to help them on their journeys to and from the Front. Funds are urgently needed to carry on the good work, which is certainly worthy of generous public support. Contributions may be sent to the Soldiers' and Sailors' Free Buffet, Victoria Station, London, S.W., or to Major-General Sir Francis Lloyd, Commanding London District.

MISSOURI, KANSAS AND TEXAS RY.

IN the spring of this year the Board had under consideration a comprehensive plan for readjusting the Company's finances, but it was deemed expedient, in view of conditions which then prevailed, to ask holders of the $19,000,000 of 5% Notes due in May to extend their Notes for twelve months at 6% interest. This, it was hoped, would afford more time for the Board to devise a financial plan with which to provide the funds necessary to pay off the Notes and some $2,733,000 of Bank loans, and to furnish the undertaking with additional working capital. It was essential if the plans of the directors were to meet with success that the whole of the Noteholders should agree to the extension proposal. Holders of about 95% responded to the request and deposited their Notes with trustees for extension, but the remaining 5% insisted upon payment in cash, and brought suits which threatened the interests of other creditors and the integrity of the working capital. In these circumstances the directors decided that the interests of all would be best served by the appointment of a Receiver. Fortunately the Court consented to the appointment as sole Receiver of Mr. C. E. Schaff, who, during the few years he has been President has already succeeded in effecting great economies in dealing with the traffic and who enjoys the confidence of all interests. It has long been recognised that the Company's interest charges absorb an undue proportion of the net income, and that some scheme of financial readjustment was essential in order to reduce those charges. Further, the amount of Common stock is very large, and, although the outlook is for larger traffic, revenues, and profits in the coming years, it will be practically impossible to earn a dividend large enough to enable the issue of new Common stock at par.

Few American railways have had more difficulties to contend with during the last few years than the Missouri, Kansas and Texas. First, there has been the confiscatory policy of the legislatures of the States through which the Company's lines run, more especially of Texas; secondly, harmful restrictions under the guise of regulation; thirdly, compulsory reductions of rates and fares; and, fourthly, not only unusual and severe droughts, but a succession of floods of great severity which caused interruptions to traffic and expensive replacement work. On the top of all these disturbing influences, and just at a time when plans were being framed to take care of the maturing Notes, came the European War.

Although not possessing the shortest route between

† Deficit.

any two important centres the road serves a territory which is developing as rapidly as any portion of the United States and reaches all of the important cities of Texas and some of the most progressive in the South West. So far as the volume of its freight business is concerned the growth has been satisfactory, the expansion during the past decade having been 80%. At the same time gross receipts have risen from $20,041,000 to $32,900,000, or by 64%. Owing, however, to the causes already specified, and the great increase in interest and other charges, the net profit last year was only $210,000 greater than ten years ago.

Notwithstanding the abnormal conditions of last year the "Katy" obtained gross receipts higher than in the previous year. The factors chiefly responsible for this were the great development that took place in the petroleum industry (the quantity of crude petroleum conveyed having risen in the year from 199,000 tons to 1,056,000 tons), the plentiful grain crops, and comparison with a period when traffic was badly interfered with by floods and wash-outs. For the year freight receipts expanded $2,169,000, or 11%. On the other hand, passenger traffic suffered severely from the adverse business conditions, the loss in passenger earnings having been $1,009,000, or 11%, although the service afforded was practically the same as in the previous year. In the aggregate there was an expansion of $980,000, or 3.1%, in the gross receipts. Floods and wash-outs were again prevalent last spring interrupting traffic and increasing expenses of operation. Nevertheless the acquisition of a large number of more powerful locomotives, which permitted of the movement of freight trains of greater weight, enabled the officers to effect a saving of $259,000, or 1%, in operating expenses. Consequently there was an expansion of $1,240,000, or 14% in net earnings. Miscellaneous income was practically unchanged, while taxes were $172,000 lower. Interest and other charges were $474,000 higher, increases having occurred under all heads, but more particularly on account of hire of equipment. On balance the addition to the net profit was $936,000, raising the figure to $1,475,000, a sum equal to the full 4% dividend on the Preferred stock and to 1½% on the Common stock. No dividend has been paid on the Preferred stock since October 1913. The improved results of last year, and the failure of the great growth in gross earnings that has occurred in the past ten years to give additional net profit, will be evident from the Income Statement herewith.

One of the most satisfactory features concerning the past year's operations was the fact that the expansion of $981,000 in gross receipts was accompanied by an actual diminution of $445,000 in the cost of conducting transportation, as a result of which the ratio of conducting transportation was reduced from 40.72% to 38.15%. The good work of the existing management is shown by a comparison of the gross receipts and conducting transportation costs last year and in 1911-12. In these three years gross receipts have expanded no less than $4,139,000, or 14.4%, but the increase in the cost of conducting transportation has been only $164,000, or 1.3%. By this means a reduction of nearly five points has been effected in the conducting transportation ratio, which for 1911-12 was 43.07% and for last year 38.15%, notwithstanding the fact that in the interval freight rates and passenger fares were reduced and the Company has had to bear the burden of higher wages and various other increased expenses. When the present management took over the line it was discovered that the system had been most unevenly developed, and that while certain sections of the road were in fairly good shape the facilities for the economical handling of traffic on other sections were most inadequate. They therefore set to work to modernise the system and to remodel the organisation in order that better operating results could be obtained. Gradients have been reduced, more powerful locomotives and higher-capacity freight cars acquired, heavier rails laid, bridges and roadbed strengthened, and various improvements effected to the system, including better terminal facilities, with the result that the average freight-train load, which prior to 1911-12 had shown little improvement, has risen since that year from 241 tons to 310 tons, an expansion of 28%. To have accomplished this during a period when the conditions have not been altogether favourable, and when the state of its finances has left much to be desired, is exceedingly gratifying. Such results, it is to be hoped, afford a good criterion of the further benefits that will be derived when by means of reorganisation of capital the Company's credit has been strengthened and the task of improving the physical condition of the property has been completed. Last year the Company expended more money upon maintenance of equipment, both actually and in proportion to gross receipts, than ever before. Upon maintenance of the road and equipment combined the expenditures represented 27.71% of the gross receipts, against 26.66% in 1913-14. How the expenses of last year compared with those for previous periods, and the savings that have been effected in conducting transportation, will be apparent from the subjoined statements:—

In the first few months of the current year the Company has again been unfortunate, as the Texas Coast has been visited by severe storms, which did considerable damage and seriously impeded export

traffic. For the four months to October gross receipts declined $495,000 and net earnings decreased $366,000. The decline in gross receipts now seems to have been arrested, and traffic appears likely to come forward in greater volume during the remaining months of the year. Last year farmers enjoyed considerable prosperity from the high prices at which they were able to dispose of the unprecedented crops gathered, and a similar state of affairs exists this year. The corn crop in the States through which the Company's lines run is far greater than in any previous year, the oats crop is larger than ever before, and the wheat crop, while not as abundant as the unprecedented crop of 1914, is, however, largely in excess of that for any other year. A comparison of the principal crops for the past three years in the States served is given below:—

Principal Crops Gathered in States Served by "Katy" Ry.

* 00,000's omitted.

One important point that must not be ignored is the change of sentiment now being displayed by the State and Federal authorities towards the railways. A change of this character is especially welcome when one is considering the affairs of an undertaking such as the "Katy," for few companies have been harder hit by unwise legislation affecting railways.

The amounts of, together with the yields afforded by, the Company's principal securities are shown below:—

ARGENTINE NORTH EASTERN RAILWAY.

THE Argentine North Eastern Railway Company is passing through one of the most trying periods in its history. Until the recent set-back rapid strides were being made, but the commercial crisis in Argentina which commenced some three years back has told heavily against the Company, and the outbreak of war in Europe last year greatly aggravated the situation. Added to this, weather conditions have been very unsatisfactory, causing heavy mortality among the flocks and serious damage to property. Consequently, whereas two years ago the net income of the line amounted to nearly £147,000, a sum equal to the full 5% on the "A" and "B" Debentures, and 2⅜% on the "C" Debentures, now the net revenue balance is only about £78,000, or not much more than sufficient to pay interest on the 5% "A" Debentures and Debenture stock. The inability of the Company to meet either the service of the "B" Debentures and stock due on June 30 last, or the interest due June 1 on a loan of £320,000, necessitated a scheme of arrangement whereby interest on the "B" Debentures and stock, as and when necessary, is to be satisfied in the next two years by the issue of Funding scrip, as well as interest to the extent of 4% per annum on the loan referred to up to September 1, 1917. The scheme further provides that any scrip unredeemed on September 1, 1917, together with all interest thereon not previously paid in cash, is to be satisfied by new "B" Debenture stock at par which the directors have been authorised to issue to the extent of £165,063. Funding scrip certificates have been issued in satisfaction of the six months' interest due July 1 last on the "B" Debentures and stock, and also in satisfaction of four months' interest at the rate of 4% per annum on the loan of £320,000 up to the same date. Moreover, the dividend of 2⅜% declared last year on the "C" Debentures and stock, requiring £23,809, has been satisfied by the issue of an equivalent amount of "C" Debenture stock at par. The net result of the past year's working, after providing interest on the "A" and "B" Debentures and stock, interest on loans, &c., is a debit balance of £55,589, which is further increased to £61,213 by the expenditure of £5,624 on special renewals.

A satisfactory feature of the year has been the substantial reduction in working charges, for with a decline of £88,861 in gross receipts, the net receipts at £74,920 show a diminution of only £36,108. The saving of £52,753 in working expenses occurred mainly in the cost of conducting transportation, for whereas maintenance outlays were reduced by £14,206, running and traffic expenses absorbed some £31,400 less than in 1913-14. The number of trains run was greatly reduced, and the saving in train mileage was consequently as much as 28.4%. The outlays of the various spending departments in the last two years contrast as under:—

Working Expenses.

(*a*) Includes a transfer of £33,146 from subvention account, against £20,000 in 1912–13.

(*b*) Equal to a dividend of 2⅜%, the payment of which was subsequently satisfied by the issue of an equivalent amount of "C" [illegible].

(*c*) Includes interest [illegible] amounting to £2,000, [illegible] was satisfied by 5% Funding scrip under scheme of arrangement dated July 21, 1915.

(*d*) Of this amount £24,806 has been satisfied by 5% Funding scrip under [illegible] scheme of arrangement.

The immediate outlook is fortunately much more promising. Locally the weather conditions have improved, and the prospects for the current financial year are reported to be bright. The camps are in good condition, and the lambing season is said to have been satisfactory. The improved conditions are already reflected in the traffic returns now coming to hand, for since the beginning of July there has been an increase in receipts of £46,166, or 44%, as against a falling off of £52,824, or 33%, in the correspond-

ing period last year. A turn in the tide has therefore apparently set in. Taking Argentina as a whole the outlook indeed could not be better. Not only are the crops abundant, but they are in demand at exceptionally high prices; and this, too, applies to the other products of the country, such as cattle, sheep, dead meat, wool, &c., which, owing to the War, are in great request everywhere. In the coming twelve months, therefore, the wealth of the nation promises to be further enormously increased. In the particular district served by the Argentine North Eastern Railway some little time may yet elapse before general conditions improve, but there is no doubt that the greater prosperity of the country generally will eventually filter through to every part; and, by the law of averages, the provinces of Corientes and Entre Rios should, after their long spell of bad weather, now enjoy better climatic conditions and reap a series of more bountiful harvests.

Stockholders may therefore regard the present setback, although severe, as a temporary matter, and now that the turn has come, the recovery of prosperity may be rapid. At present the Company is only in the initial stages of development, and as a consequence it has felt the crisis more severely than the longer established and more developed undertakings. The history of the Company has not, it is true, been of a very brilliant character, for whilst over a quarter of a century has passed since the line was originally constructed, no distribution has yet been made on the capital stock. Established in 1887, the Company in the early years of its existence struggled valiantly against adversity, and it was not until 1907, when the East Argentine Railway was acquired, that any real progress was made. The acquisition of the East Argentine was expected to be followed by an amalgamation with the Entre Rios Railways, the three lines being physically connected and complementary one to the other. A fusion in its true sense was, however, never brought about, but the large interest which the Entre Rios Railways Company now has in the North Eastern Company practically amounts to copartnership, and certainly assures amicable working arrangements between them. It is now announced that a joint general manager of the two lines has been appointed, subject to the control of a joint committee of the two boards in London. It is hoped that this arrangement will lead not only to economy in administration and the avoidance of wasteful competition, but to the improvement of facilities to the public using the railways. Ultimately a fusion of the two companies in its widest sense may be possible.

To appreciate the possibilities of the future it is necessary first of all to grasp the geographical position of the railway as it exists to-day, and, secondly, to realise the efforts which have been and are being made to consolidate and develop the important railway system now extending from Asuncion, the capital of Paraguay, to Buenos Ayres, the capital of Argentina. Starting at Buenos Ayres, the Entre Rios Railways radiate throughout the province of Entre Rios and stretch as far north as Concordia. Here the system is carried further northward by means of the Argentine North Eastern line to Monte Caseros, in the province of Corientes. From thence it is divided into two sections—the Western branch, extending to the city of Corientes, the capital of the province, and to Goya, on the river Parana; and the Eastern branch, taking the course of the Upper Uruguay River as far as Apostoles, and on to Posadas, immediately opposite the Encarnacion terminus of the Paraguay Central Railway recently constructed. Here the Company has provided a steam ferry and loading facilities, whereby trains (passenger and goods) can be exchanged with the Paraguay Central Railway without breaking bulk or changing of carriage or gauge. The ferry-boat connection with Paraguay was inaugurated in October 1913, and although traffic over the new route has not so far come up to expectation owing to the depression in trade, there is little doubt that when things mend the ferry route will be remunerative.

Other concessions have been granted the Company for the extension of its system, the most important being the prolongation of the line southward from Concordia to Concepcion del Uruguay, on the River Uruguay, where the National Government has constructed a port capable of accommodating ocean-going shipping. Now that this extension has been completed, capital expenditure has, practically speaking, ceased, and inasmuch as it is hoped that the Argentine Government will grant a further extension of time for the construction of the branch to Federal, it is not expected that any fresh capital expenditure will have to be incurred in the near future.

The traffic of the line is of a varied character. About one-third of the gross receipts is derived from passengers and two-thirds from goods and live stock. The goods traffic is made up of a variety of commodities, cereals at present forming but a small proportion of the total. Agriculture is, however, slowly spreading in the province, and a steady development of cereal traffic may be expected to result. The orange traffic is attaining considerable proportions. The varied nature of the freight traffic may be seen from the appended summary:—

Freight Traffic—Argentine North-Eastern Railway.

Although the set-back of the last two years has reduced the gross and net earnings to a relatively low level, a glance at the accompanying table clearly shows the substantial progress which the Company was making prior to the present crisis:—

Income Statement, Argentine North-Eastern Railway.

Year	Miles Open	Gross Earnings	Expenses	Ratio	Net Earnings
		£	£	%	£
1914–15	752	259,627	184,707	71.14	74,920
1913–14	667	348,488	237,461	68.14	111,028
1912–13	665	367,024	222,226	60.55	144,798
1911–12	665	319,312	195,882	61.35	123,430
1910–11	614	293,023	164,758	56.23	128,265

1905*	510	146,895	95,932	65.30	50,963
1904*	510	136,647	98,977	72.45	37,670

* Combined results of the East Argentine and Argentine North-Eastern Railway Companies prior to amalgamation.

It is obvious, therefore, that the property is a valuable one, and likely to grow in prosperity as time passes. The combination of adverse events of the past two years may possibly never recur, and now that a change for the better has set in, the recuperation of the undertaking may be rapid and pronounced. Stockholders should therefore retain their interest in the Company pending the advent of better times. The capital of the Company is as follows:—

	Amount	Interest	Price	Yield
	£	%		£ s. d.
5% "A" Debenture stock ...	842,500	5	85	6 0 6
5% "A" Debentures (bearer) ...	357,500	5	85	6 0 6
5% "B" Debenture stock ...	290,428	5*	63	8 1 3

"THE MODERN METHOD OF STORING SAVINGS."

SPECIAL INSURANCE NUMBER.

The Annual Insurance Number of THE STATIST will be issued on December 18.

The work is the most important of its kind, and places at the disposal of everyone accurate knowledge concerning the really important phases of Life Assurance. Every undertaking is dealt with adequately, and clearly shows the intending assurant the benefits offered by and the position of each Company. The great importance of Insurance has been further demonstrated during the current War, and intending assurants will find our Special Issue of great value in helping them to decide upon the offices from which they may obtain the best results.

Orders for extra copies should be sent in before date of issue.

Insurance Notes.

GRESHAM LIFE ASSURANCE SOCIETY, LTD.

FEW British life offices had transacted business in countries with which we are now at war, but the Gresham Life office did so to a large extent, particularly in Austria. The balance sheet as at December 31, 1914, shows that securities representing nearly one-eighth of the Company's assets were deposited in that country, and from the speech of the Chairman at the annual meeting it appears that these securities were within the limits of the actuarial liability on policies there effected. Consequently the War must have more seriously affected the Company's new business returns than it did those of its contemporaries. Under these circumstances, and looking to the dislocation of business at home and in other countries, the amount of new assurances transacted in 1914 shows a smaller reduction from the figures of 1913 than might have been anticipated. The sum covered by new life policies last year was £1,871,717, of which £108,310 was reassured, the net retention at the Company's sole risk thus being £1,763,407, as compared with £2,337,419 in 1913. About half of the Company's net new business of last year seems to have been effected in the United Kingdom and British colonies and dependencies, and the remainder in foreign countries. The Company has branches in Canada, South Africa, India and Egypt, as well as in several countries in Europe and South America. The net amount of the purely British new business in 1914 was £351,277, as compared with £455,462 in 1913.

The Company's net total premium income in 1914 amounted to £1,022,817, which is less by £32,814 than in the previous year. The business within the United Kingdom only accounts for less than one-sixth of the premiums, and as colonial and foreign business involves a higher rate of expenditure, this fact should be taken into account in comparing the Company's expense ratio with that of other life offices. Nevertheless, this ratio is higher than seems desirable; in 1914 it was about 22% of the premiums, which is a big handicap from a profit-producing standpoint. The Company received in 1914 £37,069 as consideration for new annuities granted, and it paid out £146,980 in annuities. Claims by death amounting to £422,573 are reported as having been within the actuarial estimate. Policies for £610,117 matured by survivance. At the close of the year the life assurance fund amounted to £10,309,966; the leasehold assurance fund to £21,058; the investment reserve fund to £120,000, and the reserve against outstanding premiums and agents' balances to £20,000. The rate of interest realised on the funds, after deduction of income tax, is reported as having been £4 3*s.* 5*d.* per cent., which shows a profitable margin of 13*s.* 5*d.* per cent., as the rate assumed at the last valuation was £3 10*s.* per cent.

The total assets amount to £10,870,808, as shown in the balance sheet on December 31, 1914, to which the following note is appended: "The securities have been taken at or under the values at which they were taken at last quinquennial valuation, and at or under cost price in the case of investments since made. The aggregate book value of the investments at December 31, 1914, after deducting the investment reserve, exceeds the market value at December 31, 1913, which date for valuation is adopted with the concurrence of the Board of Trade. The provision of any further reserve which may be found necessary at the quinquennial valuation at December 31, 1915, to make good depreciation is deferred until the definite ascertainment at that time of the amount required."

UNIVERSITY LIFE ASSURANCE SOCIETY.

ANNUAL REPORT AND QUINQUENNIAL VALUATION.

This Company was established 90 years ago for the purpose of assuring the lives of past and present members of the Universities and of other approved educational institutions. This imposes a limitation on the operations; but benefit has accrued through the assured belonging to a select class, the incidence of mortality having been very favourable, and the profits to participating policyholders during the whole history of the Society have been at a satisfactory standard. A quinquennial valuation fell due on April 30, 1915, and the results arising therefrom are announced in the directors' report for the financial year ending on that date.

The amount of the new assurances reported for that year, £142,557, is little less than the corresponding figures of the previous year; but a larger amount of reassurance was effected, and the net amount retained at the sole risk of the Society, £107,557, shows a decrease of £29,860. Nevertheless the total net premium income was increased by £1,474 to £69,976, while the expense ratio was reduced from 11.7 to 11.3 per cent. Claims by death during the last financial year amounted to £64,355, the original sums assured under the respective policies being £43,756, and the bonus additions thereto being £20,599. Thus on the average each £1,000 of assurance in cases of death claims has been increased by profits to about £1,470. The amount of death claims (including bonuses) provided for by the mortality tables on which the Society's reserves are based was larger by £13,262 than that which actually became due. Policies for £4,194 inclusive of bonus, matured by survivance. The average rate of interest earned on the funds during the last financial year was £4 0*s.* 2*d.* per cent., after deduction of income tax. The directors report that, in view of the valuation and distribution of profits, the securities were carefully reviewed, and that the amounts at which the various mortgages and loans

stood in the books were, in their opinion, adequately secured. The Stock Exchange securities were written down to their market values on April 30, 1914 (twelve months antecedent to the valuation) or taken at cost in case of those acquired since that date, the amount of depreciation written off being £30,178, whilst in order to provide for subsequent depreciation the sum of £25,000 was transferred to investment reserve from the life assurance fund, which after these adjustments amounted on April 30, 1915, to £952,120. At the same date the total assets shown in the balance sheet amounted to £1,030,143, and the directors certified that in their belief they were in the aggregate fully of the value stated, less the investment reserve fund taken into account.

The quinquennial valuation was made by the $O^{M(5)}$ Table of Mortality in combination with net premiums and 2¾% interest, special reserves being made in respect of paid-up and limited-payment policies, and for immediate payment of claims after proof of death and title. The same mortality table was adopted in 1910, but the rate of interest then assumed was 2½%. In view of the special circumstances of the financial position the assumption of 2¾% interest seems unobjectionable, for the earning power of money has increased, and it will be seen that this basis is less by 1¼% than the actual interest yield realised by the Company during the last financial year.

The surplus shown in the life fund by the valuation on these lines amounted on April 30 last to £68,316, while during the quinquennium £17,226 had been allowed as interim bonuses or as reductions of premium, and £1,460 had been paid to proprietors in excess of the rate of 5% per annum on the paid-up capital fixed by the Society's by-laws.

It was decided to apportion £65,204 of the valuation surplus amongst shareholders and participating policyholders, the amounts apportioned to these two classes being respectively £6,929 and £58,275, after taking into account sums distributed during the quinquennium.

The subscribed capital amounts to £598,000, of which £29,900 is paid up, in 5,980 shares of £100 each with £5 paid. In addition to the usual dividend of 5%, the bonus to proprietors arising from the quinquennial valuation is 24*s.* per share. The bonuses to fully participating policyholders, in reversionary form, are at the rate of 30*s.* per cent. per annum over the quinquennium, these bonuses vesting at once as regards policies on which six years' premiums have been paid, and on payment of the sixth year's premium in the case of more recently effected policies.

These rates of distribution are the same in both cases (proprietors and policyholders) as were declared five years ago.

J. AND P. COATS, LIMITED.

TWELVE months ago the directors of this well-known combination of sewing-cotton manufacturers were distinctly pessimistic as to the outlook. Though the profits for the twelve months to June 1914 were slightly less than those for the previous year, nevertheless the amount available for the ordinary distribution was £220,000 in excess of the amount necessary to provide for the 35% that was distributed for the previous year. Nevertheless the distribution was reduced to 30%, and the board warned the shareholders that it was not unlikely that the dividend on the Ordinary shares for the twelve months to June 30, 1915, would have to be reduced or even suspended. Attention was drawn to the fact that it was not possible to make any provision or even an estimate of the amount of the losses sustained subsequent to June 1914. Not only, however, had there been considerable depreciation in cotton and other materials, but a considerable loss was expected on outstanding accounts in consequence of debtors being unable to pay and of the fall in the foreign exchanges. Beyond all this a number of mills belonging to companies in which J. and P. Coats, Limited, are interested are closed, and short time was being generally worked. In spite of the gloomy anticipations thus alluded to the twelve months to June 30, 1915, while they are less than any year since 1905, have proved very little less prosperous than for the previous year, and the net result is that the Ordinary dividend of 30% is easily maintained, and is, consequently, distributed. As a matter of fact the chief result of the smaller profits for each of the past two years is to be witnessed in an absence of the usually large allocations to reserve or other purposes. Twelve months ago the only draft on profits was a sum of £40,830 written off as depreciation on the Ferguslie Thread Works. For the past year, in addition to a similar item of £39,343, a sum of £30,000 has been debited against profits and carried to suspense account as provision against depreciation of investments. The result of not specificially allocating profits is that the carry-forward has been increased in two years from £607,909 to £1,379,112.

The allocations to reserve, &c., have rightly been on a liberal scale, as may be gathered from the following statement showing the special allocations, &c., for the past 16 years:—

Year to June 30	Deprec'n on Ferguslie Thread Wks. £	Reserve £	Underwriting Fund £	Suspense Acct. for Deprec'n of Invests. £	Deb. Prem. Redemption Acct. £	Dividend Reserve Fund £	Pension Fund £	Carried Forw'd £
1915	39,343	—	—	30,000	—	—	—	1,379,112
1914	40,830	—	—	—	—	—	—	1,016,493
1913	39,293	500,000	—	—	—	—	—	607,909
1912	42,049	500,000	—	—	26,441	—	—	658,911
1911	40,273	—	—	—	—	525,000	42,500	840,462
1910	27,619	—	—	—	500,000	175,000	25,000	777,915
1909	45,624	500,000	—	—	—	—	32,522	774,638
1908	43,919	500,000	—	—	—	—	6,588	838,334
1907	42,447	500,000	100,000	—	25,000	—	50,964	853,921
1906	41,797	—	149,528	—	25,000	450,000	120,101	700,083
1905	41,136	500,000	50,000	—	10,000	—	50,000	479,908
1904	40,585	700,000	—	—	—	—	50,000	486,806
1903	36,965	700,000	—	100,000	—	—	50,000	420,720
1902	35,766	290,000	—	—	3,000	450,000	100,000	370,464
1901	35,003	606,440	40,000	100,000	99,000	—	—	308,781
1900	39,198	350,000	150,000	—	—	—	—	272,105

It will be gathered from the above, even if it were not previously known, that the business is on a very large scale. This may further be gathered from the fact that the gross trading profit, &c., for the past twelve months has reached a total of £2,685,395, and that this is the smallest reported during the past 10 years, while the highest amount shown was for the twelve months to June 1910, the figures then reaching £3,279,457. Further proof of the magnitude of the business is the amount of the share capital in issue, which totals £10,000,000, of which £2,500,000 consists of 6% Preference shares, £3,000,000 of Preferred Ordinary stock, and the balance of £4,500,000 of Ordinary shares.

To indicate the manner in which the capital has varied in recent years, together with the gross and net profits reported by the Company, we set out the following:—

	Capital £	Profits Gross £	Profits Net £
Year ended June 30, 1915 ...	10,000,000	2,685,395	2,492,619
" " 1914 ...	10,000,000	2,731,897	2,508,585

" " 1900 ...	10,853,240*	2,425,499	2,339,787

* Includes £3,353,560 premium on shares issued.

For the past twelve months, after providing for sundry expenses and depreciation on the Ferguslie

Works, there is a balance of £2,492,619, as compared with £2,508,585 twelve months ago. After providing for the Preference and Preferred Ordinary dividends there is a balance of £1,742,619. The 30% distributed on the Ordinary shares calls for £1,350,000, and after deduction of the £30,000 set aside for depreciation of investments the undivided surplus of £362,619 is added to the carry-forward, bringing it up to £1,379,112.

We show below the distribution of the profits for the past four years:—

Year ended June 30—	1915	1914	1913	1912
	£	£	£	£
Trading profits, divs., int., &c. ...	2,685,395	2,731,897	3,003,326	2,900,725

	1,742,619	1,758,585	2,023,998	1,919,889
Ordinary dividend	1,350,000 (30%)	1,350,000 (30%)	1,575,000 (35%)	1,575,000 (35%)
Surplus	392,619	408,585	448,998	344,889
Sundry appropriations	30,000	—	—	26,441
	362,619	408,585	448,998	318,448
To reserve	—	—	500,000	500,000
	362,619	408,585	−51,002	−181,552
Brought forward	1,016,493	607,908	658,910	840,462
Carried forward	1,379,112	1,016,493	607,908	658,910

As already indicated, the total capital in issue is £10,000,000. The Company has accumulated a marine and fire underwriting account of £600,000, while there has also been set aside £500,000 as pension and compensation fund for employees. The reserve fund amounts to £5,500,000; there is also a dividend reserve of £2,100,000; and with the latest addition the provision against investment depreciation reaches £165,393, while the sum carried forward is, as pointed out above, £1,379,112. The total of the reserve, dividend reserve, suspense account, and the carry-forward is £10,144,505, or a sum in excess of the total outstanding share capital. Herewith we summarise the liabilities and assets as at June 30 last:—

LIABILITIES.	£	ASSETS.	£
Issued share capital ...	10,000,000	Capital expenditure ...	11,231,820
Sundry creditors	677,912	Sundry debtors	2,263,883
Underwriting account ...	600,000	Stock of goods	1,888,696
Reserve fund	5,500,000	Cash at bankers	1,601,985
Div. reserve fund	2,100,000	Bills receivable	297,776
Pension, &c., fund ...	500,000	Investments	1,963,733
Suspense account	135,393	Advances	2,162,024
Profit and loss	1,896,612		
	21,409,917		21,409,917

As regards the cash in hand, the balance sheet divides this item into two, differentiating the cash in banks in foreign countries at war, amounting to £749,653, from the cash in hand elsewhere, amounting to £852,332. The auditors point out that no estimate is possible as to the effect of the War on the value of certain of the assets, and no alteration has accordingly been made for the present in the book values. It must be assumed, however, that the losses are likely to be very great. The Company has mills in Germany, Austria, Belgium, and Poland. In view of all the facts of the case, it must be acknowledged that the results for the past twelve months are most distinctly satisfactory, and though it is likely that considerable losses have already occurred, and will have to be provided for in the future, the Company has built up so strong a position by reason of its conservative financial policy that the future can be regarded with a certain amount of equanimity. The large reserves accumulated should be more than sufficient to provide for any losses that have occurred, and with the excellent management shown the business should have a strong recuperative power as soon as events generally take a turn for the better. On the Preference shares a yield of 5½% may be obtained, and on the Preferred Ordinary shares one of about 5⅝%. The £1 Ordinary share stands at 5¼, and on the basis of a 30% distribution the yield is just over 5¾%, which is a very much higher return than is obtainable in normal times. Herewith we summarise the capital, prices and yields afforded:—

Amount	Description.	Par	Price	Div.	Yield
£		£	£	%	£ s. d.
2,500,000	6% Preference Shares	10	11⅛	6	5 11 5
3,000,000	Preferred Ordinary	100	362½	20	5 12 0
4,500,000	Ordinary Shares	1	5¼	30	5 16 0

RUBBER TOPICS.

THE topic of forward sales has again been the subject of discussion in the Rubber market this week, owing to the publication of figures of production and sale prices of the group of companies shown below:—

Company	Crop to Nov. lb.	Amount Sold to Date lb.	Gross Average Realised s. d.	From Current Crop Year's lb.	Forward Contracts — Gross Average Price s. d.	Next Year's Crop lb.	Gross Average Price s. d.
Bagan Serai	240,233(11)	160,360	2 2·64	34,720	2 0·47	94,080	2 1·75
Batak Rabit	96,120(10)	10,578	2 5·03	103,040	2 1·71	28,080	2 1·79
Kuran ...	255,298(11)	176,210	2 2·02	22,400	2 0·44	73,920	2 1·75
Rubana ...	317,681(7)	165,455	2 1·46	183,680	2 1·85	124,080	2 2·18
Straits ...	1,850,641(11)	1,215,301	2 1·71	434,560	2 0·77	819,840	2 1·14
Tali Ayer.	361,980(7)	148,040	2 2·79	178,080	2 1·92	127,680	2 2·63

Figures in parentheses ( ) indicate number of months of output.

The advantages to the companies individually, and to the industry in particular, resulting from the sale of a large proportion of the crops for forward delivery were clearly indicated by Mr. C. A. Lampard at the meeting of the Tandjong Rubber Company last week. He said:

> So long as the price obtained shows a reasonable profit it is wise to hedge against an uncertainty by selling a proportion of the expected output. Secondly, manufacturers require to buy forward in order to cover their own contracts which they enter into for the delivery of manufactured goods extending over a very long period. . . . Manufacturers cannot go on accepting orders for manufactured goods to be delivered over a long period without covering their supplies of the raw material. By selling forward a portion of the crop the business of manufacturers is facilitated and the factories are encouraged to use plantation rubber. . . . Furthermore, by selling forward a certain proportion of their output the companies secure a certain profit on a proportion of their output, and if the market rises above the prices at which they originally made their contracts, then they have a proportion of their crop on which they will benefit, while, on the other hand, if the market falls, their forward contracts tend to average the price.

BUKIT SEMBAWANG.—In our table last week we gave this Company's market capitalisation at 2*s.* 9*d.* per share as £69 per planted acre. The correct figure should have been £54. This is on the basis of 8,000 planted acres. However, options on 200,000 shares at par extended to December 8, 1915, have probably now been exercised, and if so, this would give the Company £20,000 additional funds, and increase the issued capital to £334,956. The effect would be to increase the market capitalisation per planted acre, taking the price of the shares at 3*s.* to £63. This is a very low figure, but the financial position at the date of the last balance sheet was weak. After allowing for the 3% dividend declared for the year, the current liabilities exceeded the liquid assets at the end of 1914 by over £12,000. The issue of the 200,000 shares under option would bring in £20,000; but expenditure on the immature area has to be allowed for, and this in 1914 cost £17,328. The rubber crop of the current year ending December 31 will probably be about 530,000 lb., against 307,000 lb. in 1914; and for the next few years there should be further increases in output.

STRAITS RUBBER.—We regret that in our tabular analysis of last week and also of November 27 we wrongly gave this Company's market capitalisation per planted acre as £187. The proper figure at the market quotation of 4⅛ should be £144, as the Company holds 145,000 shares of the Rubana Rubber Estates, Ltd.

TANDJONG RUBBER.

THE annual report of this Sumatra Rubber Company for the financial year ended June 30, 1915, disclosed very satisfactory progress, the production for the twelve months amounting to 800,958 lb. against 545,267 lb. in the previous year. Of the planted area of 5,116 acres (4,513 acres planted prior to 1912), an average of 2,622 acres, or a little more than half, were tapped during the year, the yield per acre tapped being 312 lb., against 251 lb. in 1913-14. The yield per planted acre for the past year was only 156 lb.—due, of course, to the large proportion of the area still to come into bearing. The price obtained for rubber was slightly lower last year than in the preceding twelve months, but reduction in "all-in" costs, despite war risk insurance, more than offset this factor, with the result that the profit obtained per lb. was 11¼*d.* in the year ended June 30, 1915, against 10¼*d.* in the previous year. Including sundry receipts and the amount brought forward, the total available for the past year reached £47,294, in comparison with £29,578 in respect of 1913-14. A sum of £10,000 has again been transferred to reserve, and for the past year a dividend of 20%, calling for £30,000, has been declared against 8%, requiring £12,000, for the previous year. The carry-forward is very slightly reduced.

The following table gives a good idea of the progress of the Company:—

	Years ended June 30—			
	1915	1914	1913	1912
	Acres	Acres	Acres	Acres
Area suitable for rubber	7,103	7,103	7,103	7,103

Dividend paid	30,000 (20%)	12,000 (8%)	5,941 (5%)	—
Carry-forward	7,294	7,578	5,402	2,141
Issued capital	150,000	150,000	125,870	97,105
Surplus liquid assets	14,850	18,025	11,400	3,371

Present price of shares, 3 1/16 d. Market capitalisation per planted acre, £83.

As regards the current year the estimated output is 1,042,200 lb., and a further reduction in costs is officially looked for. In the five months to end November 462,804 lb. have been harvested, so that the estimate for the year is well on the way to being realised. 606,731 lb. of the crop have been sold forward at prices averaging about 2*s.* 2*d.* per lb., and in view of the present market price of over 3*s.* per lb. it looks as if a profit of at least 1*s.* per lb. can be anticipated, representing, on the estimated output, a net profit of £52,100 for the current year. As regards capital expenditure, the estimated outlay is £17,379, a sum amply covered by the surplus funds in hand plus the depreciation allowed in cost of production. The prospect, therefore, is for the current year's dividend to be increased to at least 25%, leaving a considerable surplus for excess profits tax.

The shares at the present price of 3 1/16 *cum* div. afford a yield of 7% on last year's dividend of 20%, and of 8¾% should the dividend be increased to 25%. Eventually, however, when the whole of the planted area, now increased to 5,366 acres, is in bearing, a much higher dividend than 25% should be forthcoming on the basis of a selling price of 2*s.* per lb. for rubber. The yield per acre tapped—much of it young rubber—for the past year was 312 lb. At full maturity the whole planted area of 5,366 acres should yield 350 lb. per acre, which would give an annual output of 1,800,000 lb. With rubber at 2*s.* per lb. and "all-in" costs reduced to 1*s.*, this full maturity production would give a profit of £90,000, or sufficient to pay an annual dividend of 50% with £10,000 to reserve. At their present price, therefore, the shares are attractive. This fact is reflected in the low market capitalisation of about £80 per planted acre.

SENNAH RUBBER.

THE shareholders of this Sumatra rubber Company have reason to congratulate the manager of their estates on the achievement of what is tantamount to a record for a comparatively young producer. With only 2,462 acres in bearing, of a total planted area of 7,183 acres, the output for the year to June 30, 1915, amounted to 980,253 lb., equal to the very high yield of 402 lb. per acre tapped. The total number of trees contained in the planted estate of 7,183 acres is 807,690, and the 1914-15 output was obtained from an average of 294,370 trees, or from only 36% of the total number planted, and the average yield per tree tapped was as high as 3⅓ lb.—a notable performance having regard to the young age of the plantations, as shown below:—

Years of Planting							
1907	1908	1909	1910	1911	1912	1913	Total
Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres
553	930	1,500	336	2,202	960	702	7,183

Another satisfactory feature of the year's work is the further reduction in cost of production, bringing the "all-in" figure down—notwithstanding extra war charges—to 1*s.* 2.37*d.* per pound, against 1*s.* 3.46*d.* in 1914. The output realised an average of 2*s.* 2.8*d.* per pound, and the resultant profit of a little over 1*s.* per pound enabled the Company to earn a net profit of £50,670—after deduction of directors' extra remuneration—or, including sundry receipts, £52,111. Out of this a dividend of 10%, free of income tax, is to be paid, calling for £45,250, and a sum of £20,000 is added to the reserve, reducing the carry-forward from £25,543 to £12,404.

The balance sheet at June 30, 1915, shows surplus liquid assets amounting to over £37,000, but nearly £40,000 of the Company's cash is with bankers in Antwerp, subject to moratorium, and, consequently, at June 30 a loan of £23,442 had been obtained from the Company's agents in Amsterdam. The releasing of the Antwerp funds, however, would much more than provide for the liquidation of the temporary loan. The following table shows the progress of the undertaking in the past three years:—

	Years ended June 30—		
	1915	1914	1913
	Acres	Acres	Acres

Carry-forward	12,404	25,543	10,571
Issued capital	452,500	452,500	411,487
Surplus liquid assets	37,252†	59,940	45,585

Present price of £1 shares, 1xd. Market capitalisation per planted acre, £84.

* Preliminary expenses and underwriting commission.
† Including £39,497 in Antwerp subject to moratorium.

The 452,500 £1 shares of the Company have a market quotation of 28*s.* 6*d.* *cum* div., so that the net market capitalisation per planted acre

works out at about £84—a very low figure having regard to the evidence of high rubber yield per acre. At full maturity the production of the estates should be at least 2,500,000 lb., and may, indeed, very well reach to 3,000,000 lb. per annum. On the very conservative assumption of only 2,500,000 lb. full maturity output per annum, 1*s.* per pound profit would give a net income of £125,000, or sufficient to pay 25% dividends and leave £12,000 for reserves, &c. If 3,000,000 lb. be the ultimate full maturity yield, even brighter prospects are in store for shareholders. Consequently the £1 shares at about 1⅞ ex div. look cheap.

The output for the current year is estimated to be 1,350,000 lb., and of this 543,346 lb. have been produced in the five months to end November, the yield for last month being as much as 117,000 lb. Next financial year there should be a further very large increase in output, for the 2,202 acres planted in 1911 will then be in bearing.

ANGLO-PERSIAN OIL.

In view of the agreement entered into in May 1914 between the Admiralty and the Anglo-Persian Oil Company, and also of recent events in Persia and the neighbourhood, the position of the Company is of distinct interest at the present time. The Company was formed in 1909 with the object of working a concession obtained from the Persian Government in 1901, running for 60 years from May of that year, and giving the exclusive right to drill for, produce, pipe, and carry away oil and petroleum products throughout the Persian Empire except in five provinces, the Company's capital consisting of £2,000,000 in shares and £600,000 in Debentures, practically the whole of the Ordinary shares of £1,000,000 belonging to the Burmah Oil Company. The agreement with the British Government was brought about by the desirability of the Admiralty having independent control of considerable supplies of natural petroleum in consequence of the adoption of the use of oil as an alternative to and probably as an ultimate substitute for coal in the Navy, and the agreement provided, *inter alia*, for the introduction of Government capital on a large scale for the purpose of enabling the Company to extend very largely its operations.

The agreement provided that His Majesty's Government shall subscribe to the capital of the Company as follows:—

	£
Ordinary shares	2,000,000
Preference shares	1,000
Total share capital to be held by Government	2,001,000
First Debentures, ranking *pari passu* with existing Debentures	199,000
Total Government subscription	2,200,000

The total share capital and Debentures of the Company will ultimately be as follows:—

	£
Ordinary shares	1,000,000
Preference shares	999,000
Total share capital held other than by Government... ...	1,999,000
Total share capital to be held by Government as shown above	2,001,000
Total authorised share capital	4,000,000
Debentures	600,000
Debentures to be held by Government	199,000
Aggregate of proposed share capital and Debentures ...	4,799,000

At March 31 last the issued capital was £2,750,000, as against £1,900,000 twelve months previously. The total assets were valued at £3,737,895, of which the concession, &c., stood at £1,635,312, the other main item being the value of the refinery, installations, &c., standing at £1,420,280. Herewith we summarise the liabilities and assets as at March 31 last:—

Liabilities.	£	Assets.	£
Issued share capital .	2,750,000	Concessions and Debs. in other Companies ...	1,635,312
5% Debenture Stock .	[illegible]	Refinery, Bank installations, Tanks, &c.	1,420,280
Sundry Creditors .	2[illegible]	Stocks of crude oil, &c. ...	104,484
Bill payable .	70,459	Sundry debtors	291,942
Profit and Loss .	54,515	Preliminary expenses ...	14,400
		Cash	128,033
	3,737,895		3,737,895

In February last a portion of the Company's pipe-line was damaged by local Persian tribesmen, and the transport of oil was rendered impracticable thereby for a period of about four and a half months, so that refining operations had to be suspended for about a corresponding period. The Persian Government is liable for the consequent loss, but no credit is taken therefor in the accounts now submitted. The claim for the loss sustained is to be presented in due course, and the amount thereof will be recovered from the royalties payable. A further loss amounting to £51,004 was sustained by the Turkish Government requisitioning oil and other property before the outbreak of hostilities. It is expected that the greater part of this amount will be recovered, but no credit has naturally been taken for it so far. The various extensions for which capital has been provided by the British Government are being proceeded with as expeditiously as possible. The laying of an additional pipe-line has been delayed by the local disturbances already referred to and the consequent shortage of transport facilities. The crude output of the subsidiary companies has not been affected by the unsettled conditions prevailing, but owing to the damage to the pipe-line the whole of the production from the flowing wells in excess of the storage capacity had to be burned during the period that the pipe-line was out of use. Further drilling for reserve production has not been prosecuted so vigorously as was intended owing to the delay which has occurred in laying the new pipe-line and to the excessive production from existing wells. It was anticipated by the Chairman last year that the Company would be able to earn its Preference dividend during the twelve months to March 1915. The trading profit for the twelve months has amounted to £171,083, as against £20,668, and after providing for depreciation, Debenture interest, &c., there is a net profit of £90,431. The Preference dividend requires £55,842, so that it will be seen the Chairman's anticipation of twelve months ago has been amply verified. The Burmah Oil Company guaranteed the payment of the Preference dividend, and the total amount paid by the Burmah Company under the guarantee is £192,152, which sum is repayable out of future profits. Not only has the Preference dividend been earned and paid, but the debit balance of £26,711 brought forward from the previous year is converted into a credit balance of £7,878. This may be seen from the following:—

Year ended March 30—	1915	1914	Inc. or Dec.
	£	£	£
Trading profit	171,083	20,668	+150,415
Transfer fees	161	117	+ 44
Total income . . .	171,244	20,785	+150,459
Depreciation	40,000		+ 40,000
Directors' fees, &c. .	9,876	8,536	+ 1,340
Debenture and other interest	30,937	18,000	+ 12,937
Net profit	90,431	Dr. 26,711	+117,142
Preference dividend (6%)	55,842	—	+ 55,842
	34,589	Dr. 26,711	+ 61,300
Brought forward	Dr. 26,711	—	+ 26,711
Carried forward	7,878	Dr. 26,711	+ 34,589

Naturally, the outlook is uncertain having regard to the unsettlement of the country, and the shareholders will look forward with considerable interest to the views of the board to be expressed by the Chairman at the meeting on December 20. The public is only interested in the position of the Debenture stock and Preference shares, the former being quoted at 97½, and the latter at 17*s.* 6*d.* for the £1 share. The Preference shares are entitled to 6%, and participate for a further 2% after 6% has been paid on the Ordinary shares. They have considerable attractions as an oil investment provided the risks are recognised.

VULCAN MOTOR AND ENGINEERING.

One of the smaller motor-manufacturing companies that has experienced very considerable benefit from working under war conditions is the Vulcan Motor and Engineering Company, of Southport. Their sales have gone up from £158,831 for the twelve months to September 30, 1914, to £217,253 for the past year, while the net profit has risen from £20,699 to £45,781. This enables the dividend on the Ordinary shares to be raised from 10% to 30%, leaving a surplus of £22,493, or practically half the net profit, which is added to the carry-forward, bringing it up to £28,044. The Company's record for the past four years is as follows:—

Year ended Sept. 30—	1915	1914	1913	1912
	£	£	£	£
Sales and receipts	217,253	158,831	143,835	117,086
Stock on hand	80,745	66,804	59,037	43,788
Discounts	1,616	2,300	2,000	1,053
Total income	299,614	227,935	204,872	161,927
Stock on hand	66,804	59,037	43,788	34,570
Materials purchased	119,159	89,740	89,849	67,513
Wages	43,900	39,436	38,059	29,190
Depreciation, &c.	4,338	3,345	2,743	5,123
General expenses	19,632	15,678	14,806	15,156
Total expenses	253,833	207,236	189,245	151,552
Net profit	45,781	20,699	15,627	10,375
Preference dividend	665	717	669	544
Ordinary dividend	22,623 (30%)	6,834 (10%)	5,556 (10%)	4,125 (7½%)
Reserve	—	15,000	10,000	—
Surplus	22,493	Dr. 1,852	Dr. 598	5,706
Brought forward	5,551	7,406	8,004	2,298
Carried forward	28,044	5,554	7,406	8,004

The issued share capital is £88,464, of which £12,714 consists of 6% Preference shares, the balance of £75,750 being Ordinary shares. There is a reserve fund of £25,000, while the carry-forward, as pointed out, is £28,044. A summary of the liabilities and assets is appended:—

LIABILITIES.	£	ASSETS.	£
Issued share capital	88,464	Buildings	33,650
Sundry creditors	24,368	Machinery, plant, &c.	42,768
Reserves	28,487	Stock on hand	80,744
Profit and loss	39,740	Sundry debtors	7,755
		Cash	6,142
		Investments	10,000
	181,059		181,059

Since the end of the financial year the Company has become a controlled establishment, and doubtless, therefore, it will continue to be fully occupied with business during the ensuing twelve months, and there should be little difficulty in providing for the excess profits tax, and yet be able to maintain the dividend at 30% if so large a distribution is thought desirable. The £1 share is quoted at 27*s.*, and on the basis of a 30% distribution the yield afforded is about 25%. As the Company has built up a good reputation for its manufactures it should be able to earn substantial profits even when working under normal conditions.

HALLEY'S INDUSTRIAL MOTORS.

War conditions have proved of great benefit to this Company. Current accounts cover a period of nine months only, inasmuch as the works were placed under control of the Minister of Munitions on October 2 last, and, consequently, it was thought desirable to close the accounts on September 30. For the nine months under review a profit of £67,442 was secured, as compared with £53,255 for the whole of 1914, and £26,551 for 1913. An actual dividend of 15% for the nine months, or at the rate of 20% per annum, is paid, and a sum of £10,000 is carried to the reserve fund, while £25,000 is set aside to a special reserve fund "against Finance Act legislation and other contingencies due to the War." There then remains undivided £9,266, which is added to the carry-forward, bringing it up to £21,296. The Company's profit record for the past five years is as follows:—

Year ended Dec. 31—	1915*	1914	1913	1912	1911
	£	£	£	£	£
Profit	67,444	53,255	26,551	24,004	15,095
Depreciation	7,428	7,001	4,512	3,331	2,735
Net profit	60,016	46,254	22,039	20,673	12,360
Dividend	15,750 (15%)†	16,333 (20%)	9,500 (15%)	6,391 (15%)	3,435 (10%)
	44,266	29,921	12,539	14,282	8,925
Reserves, &c.	35,000	15,000	8,000	8,000	6,000
	9,266	14,921	4,539	6,282	2,925
Brought forward	12,030	5,122‡	4,390‡	1,762‡	1,074‡
Carried forward	21,296	20,043	8,929	8,044	3,999

* Period ended September 30, 1915. † Actual. ‡ After deducting directors' fees, &c.

The issued share capital is £105,000, and there have been accumulated reserve funds totalling £99,528, while there is also an undivided balance, as pointed out, of £21,296. The assets are valued at £257,679, the stock and work in progress standing at £83,071, as compared with £65,653 twelve months ago. The cash in hand was £40,330, and the Company had made an investment of £30,000 in the War Loan. A summary of the liabilities and assets is appended:—

LIABILITIES.	£	ASSETS.	£
Issued share capital	105,000	Buildings, machinery, plant, &c.	87,521
Sundry creditors	21,355	Stock of work	83,071
Reserve fund	74,528	Sundry debtors	16,757
Special reserve	25,000	War Loan investment	30,000
Profit and loss	31,796	Cash	40,330
	257,679		257,679

The outlook is, naturally, for another busy and prosperous year. The £1 share may be obtained at about 53*s.*, and on the basis of a 20% distribution the yield afforded is practically 8%. In view of the very strong position built up, and of the conservative financial policy carried out, the shares have distinct attractions.

P. AND O. MEETING.

At the meeting of the Peninsular and Oriental Steam Navigation Company on December 8 Lord Inchcape referred very briefly indeed to the recent policy adopted by the board as regards the form of the accounts, and stated that the plan had been adopted deliberately because it was conceived to be in the best interests of the proprietors. Possibly, however, Government requirements have also had weight. He added: "Were the accounts to be seen by our stockholders alone we should have no hesitation in presenting them in a much more detailed form, but in view of the keen competition which we may expect in the near future from neutral shipowners who have been coining money during the war free from Budget levies, and in view of the renewed attacks upon our trade which we may anticipate not only from Germany and Austria but from others when the war is over, we see no advantage, but very much the reverse, in publishing your private affairs to the world." Needless to say, Lord Inchcape very discreetly ignored the acknowledgment of twelve months ago only, that the public is entitled to possess information "such as the amount of depreciation, insurance, mail subsidy, &c." He did, however, state that ample provision had been made for depreciation both in the ships and in the securities, and he also pointed out that no matter what the dividend may be, whether it remains as at present, whether it is increased, or whether it is reduced, the shareholders may feel perfectly satisfied "that not a penny will ever be distributed beyond the amount which the Company, after making ample allowance for depreciation and all contingencies, can well afford to pay." While we regret the decision of the board to withhold information hitherto available, and consider that its pessimism is not justified, as the shareholders have approved the decision taken, there is, perhaps, nothing further to be said unless it should be necessary to appeal to the public for further capital, in which case presumably some of the information now withheld would be forthcoming.

COPPER.

WHILE the strength of the refined Copper market has continued without interruption, the tone of standard copper has been variable and a rather substantial reduction has been seen from the highest points which were touched during the upward move. A good many people seem unable to understand why standard copper should recede while refined copper advances, but there are several factors which account for this. In the first place, owing to exceptional conditions which have arisen, largely in consequence of the War, standard copper is hardly a merchantable commodity at the present time, because it cannot be exported except under permits (which permits are frequently refused), while it cannot be converted into refined material in this country save in limited quantities. It thus comes about that its value as a hedge has been largely withdrawn. In the old times dealers, when they made a sale of refined copper, hedged it in standard copper, and vice versa, because in those days the markets for standard and refined moved to a large extent upon parallel lines, and the former was therefore a very useful medium for those dealing in the latter. The actual difference in value between standard and electro is about £6 to £8 a ton, but within the last few days we have seen standard copper at £80 a ton and electrolytic at £98 to £99 a ton. Speculative interest in standard copper is now of only trifling dimensions. The article has, as stated, fallen into disfavour as a hedging medium, while it is largely unusable in this country for conversion into refined, and in addition to the foregoing the Government is keeping a very keen watch upon all the metal markets with a view of stopping excessive speculation. Under all the conditions which obtain, therefore, it will be seen that there is nothing in the situation inducing an extension of speculative dealings in the standard copper market. Within the last few months the stocks in England and France have gone down very sharply, as will be seen from the following table, which is abstracted from the returns of Messrs. H. R. Merton and Company:—

1915	Stocks of Standard Copper in England and Wales Tons	Total Copper Stocks in England and France Tons
Aug. 14	24,323	29,943
,, 31	21,151	29,564
Sept. 14	20,457	27,427
,, 30	19,382	25,158
Oct. 14	16,643	19,992
,, 31	17,200	20,335
Nov. 14	14,453	17,113
,, 30	12,694	15,045

The total reduction during the period tabulated above is not far short of 50%, and this for itself fully accounts for the refusal of the authorities to permit exports of rough copper to America. It was all very well to allow this material to be shipped freely across the Atlantic for refining purposes when there was an abundance of such material available here, but conditions being reversed it becomes a duty to conserve the supplies if only for the sake of protecting the visible stock in this country, which is already far too small in relation to consumption. Meantime American producers are able to enforce their own terms for refined copper, and this notwithstanding the fact that production is being pressed to the utmost capacity. It is to be remembered, however, that a good deal of output has been shut off across the Atlantic owing to strikes and other local causes. The big refinery, for instance, of the Nichols Copper Company was closed down for a period last month owing to a strike for higher wages, while supplies of raw material for the electrolytic plants are restricted owing to the suspension of operations at leading mines in Arizona and Mexico. As far as can be traced in the absence of all reliable statistics, it seems reasonable to assume that there is no accumulation now proceeding in refiners' stocks of electrolytic copper, while, as consumption is practically limited to war purposes, price is a factor which has ceased to operate.

AMERICAN COTTON.

LIVERPOOL: Thursday.

THE upward movement in cotton which has continued throughout the fortnight has been in reality the natural economic effort of this market to attract its

share of the crop to this country. Unfortunately, contemporaneously with the advance in prices here, ocean freights have also risen—as much as 200 cents per 100 lb. having been paid—and the financial prosperity of the South has encouraged planters in America to hold for higher rates, so that although during the fortnight the price of American cotton has risen ½*d.* per lb., the difficulties which importers have to overcome in bringing cotton to Liverpool have not diminished. Occasionally some lines of import cotton are thrown on the market, with the result that prices break sharply, as, for instance, yesterday afternon, when prices, after being very firm all day, reacted fully 10 points in a few minutes under hedge-selling against actual cotton bought in America. This afternoon, again, a similar decline was observed. At the moment there appear to be only two possibilities which might keep the market in check. The first is a widening in the parity between this market and those in America, sufficient to attract cotton here and to avert the shortage in supplies for Lancashire, with which we are threatened unless some means are found to enable importers to bring the raw material to this country. The other possibility is a change in the disposition of Southern holders and a willingness on their part to sell at lower rates. It is probable that both these causes will operate gradually, but under the present outlook there does not appear to be much hope for cheap cotton, and it seems evident that, unless we are prepared to pay a good price for what we require, we shall not succeed in accumulating a stock here large enough to render the position of consumers comfortable. The difficulty is one of distribution only. We believe if supplies could be divided in normal proportions amongst the consuming countries there would be ample to go round, but we fear that for some time we shall see plenty in America and comparative prospective scarcity here.

The ginning reports continue to confirm crop estimates of about 12,000,000 bales. The sixth report for the season was issued yesterday, and gave as ginned to November 30 9,711,000 bales against 8,777,000 a fortnight ago and 13,066,000 up to November 30, 1914. Several crop estimates have been promulgated in America round about 11,000,000 bales, but our own information is still that the crop is likely to total 12,000,000 or a little more.

Correspondence.

OUR MONEY METHODS: THEIR COST TO THE TAXPAYER.

To the Editor of THE STATIST.

SIR,—At the present time, when plans for the raising further loans in the United States are being considered by the Government for the purpose of meeting the depreciation in the credit of British money as expressed in the exchange with New York, the question arises why the taxpayer should have the burden cast upon him of any loan for such a purpose.

There is not a sign of any loss of credit in our money within the country itself. Depreciation appears only in the international exchanges.

Our gold money cannot depreciate in the exchanges. It will secure to-day exactly the same equivalent quantity of, say, United States gold money that it did before the War. Depreciation can arise only if we have not, or do not use, enough gold to pay our international debts. The fall in the New York Exchange is therefore due to a deficiency in the quantity of gold required to pay the balance of indebtedness which we owe.

This deficiency can only arise from our internal credit money which, until the outbreak of the War, consisted of statutory (Bank of England) notes, and the deposit and cheque money of our banks. The State can scarcely be blamed if there is any shortage in the quantity of gold held against this credit money. Under the Bank Act the amount of statutory money which could be created on credit was limited to a well-defined maximum, while in the case of bank money the amount that could be created on credit was limited only by such discretion as the authorities of each institution exercised. We know the amount of notes that have been issued and the amount of gold held against them. But although we can gather from the published balance sheets of the banks the amount of their deposits, the amount of gold or Bank notes held against them is, in the case of many of the banks, not ascertainable. But we know enough in other ways to be able to say that the amount of the statutory money issued on credit is insignificant compared with the amount of the deposit and cheque money based on credit. How then can the Government be responsible for the gold deficiency, and be called upon to help to such a large extent in squaring the international accounts?

We may deplore the increase in our imports at a time when our exports have fallen off, but the importers pay for them in the ordinary way, and it is plainly the business of those who manage our credit money to convert the money so paid into gold when wanted for settling foreign debts.

Credit money, of course, economises gold and is profitable. The Exchequer last year received from the profits on the note issue the sum of £186,731—an amount which is infinitesimal compared with the profits earned by the banks on their credit money. Is it fair that the taxpayer who derives so diminutive a return on the State's small portion of the country's credit money should be called upon to bear the cost of raising enormous loans to make up a deficiency in the gold reserves? He has already been

made to stand behind the banks by the credits created in their favour under the authority of the Currency and Bank Notes Act of last year—a responsibility which, in the existing state of the foreign Exchanges, appears to be more onerous than is generally recognised. He has also to bear the burden of half of the debt created by the Franco-British American loan.

It is true there are the precedents for the suspension of the Bank Act which might be taken to justify the banks in relying upon this form of assistance in a crisis, and in the Government conceding it. But the precedents were not adhered to by the new Currency Act, and there is no precedent in this country for the Government incurring permanent debt for exchange purposes.

If it is urged that the occasion is unprecedented and requires unprecedented ameliorative measures, the taxpayer can reply that in other ways he has to meet unprecedented demands.

In some quarters it appears to be held that the rectification of the exchanges is only a phase of the war expenditure. If that is so there does not appear to be such an equitable adjustment of liabilities to meet this expenditure as could be looked for as between the banks and the taxpayer. And if the American loan is to be taken as war expenditure, why was it put forward in the House of Commons as a trade loan and an exchange loan?

It may be that in the present very abnormal circumstances there is no alternative to action by the Government. Of that the public are not in a position to form an opinion in the absence of definite information respecting the strength of the reserves of gold. But if such is the case the Government can hardly take over such enormous responsibilities unconditionally.

The credit of British money may be saved by doing so. The danger of a further loss of credit may be averted, but another danger is created. That danger is that the taxpayer may not acquiesce in an unequal division of profits and losses in respect of our credit money.

I enclose my card, and subscribe myself

December 7, 1915. TAXPAYER.

CANADIAN MINING CORPORATION, LIMITED.

To the Editor of THE STATIST.

SIR,—We have seen your article on the Canadian Mining Corporation in your issue of December 4, 1915, and desire the opportunity of answering your criticisms of the board of this Company, which, we feel, are due to a misapprehension of the conditions.

Primarily, the difference between mining in Cobalt and most other important fields must be fully appreciated in order to fairly criticise. These differences, which have been pointed out more than once by the consulting engineers of Cobalt Companies, cannot be too strongly emphasised on this occasion, and may be explained in a few words. In most large mines elsewhere the life of the undertaking depends on the development of more or less known ore bodies, and the extent and direction of this work is clearly indicated between narrow limits. Exploration in such cases is a secondary matter, and is a comparatively small item in the operations.

At Cobalt, on account of the relatively small tonnage and short life of individual veins, the reverse is the case, and the life and proper development of large properties there depend upon the discovery of new veins by exploration work, which forms a comparatively large proportion of the operating expense. Thus, the geologic conditions and limits of the favourable areas for development being definitely known (as in the case of the Mining Corporation's property), the intersection of new veins by exploratory cross-cuts can hardly be looked upon as an unusual or unexpected occurrence, but, on the other hand, is the natural outcome and object of the routine exploration work continually under way. Where this work is being carried on in an area containing a multiplicity of veins and "stringers," usual on such properties as the Coniagas, Townsite, or City, for example, official publication on each occasion when the cross-cuts encounter a vein, would be a futile practice.

Anyone versed in Cobalt history will recall the publications in the local papers in the "boom days" of startling headlines giving the widths and assays of almost daily discoveries of new veins. The object of these continual "puffs" was to attract wide attention to the camp, while the result was immediately reflected in the increased business of the brokers' offices of Toronto, Boston, and New York. Engineers, and others familiar with the uncertain character of Cobalt veins, and the sudden and unexpected appearance and disappearance of high-grade ore, as work progresses, will readily appreciate that announcements of such discoveries without an estimate or forecast of the amount of ore and silver developed in each case, are not only no indication of the conditions of the property, but are distinctly misleading. To arrive at such an estimate would mean giving estimates of the ore reserves on each occasion. As the underground workings of the Mining Corporation aggregate over 84,000 feet, or nearly 16 miles, not including the shafts and thousands of cubic feet of stoping, it will be readily seen that "four-weekly" estimates of ore reserves, such as would be necessitated by the practice advocated, would be not only entirely impracticable, but contrary to custom. The object of the amalgamation of the properties now comprised in the Mining Corporation, besides the attainment of a higher economic efficiency by consolidated management and greater distribution of fixed charges, was to secure as regular a production as compatible in a form of mining inherently speculative. It is doubtless difficult for those acquainted only with mining like that carried on at Rio Tinto, the "porphyry coppers," or on the Rand to fully grasp Cobalt conditions, but the soundness of the policy outlined above (which is being rigorously followed by the Canadian Corporation) will, we feel confident, be endorsed by all competent professional opinion.

Your statement that the administration of the Company is slack, that official information is altogether lacking, and that regular four-weekly statements are spasmodic and belated, appear to us unmerited and unfair.

Present methods of reduction and marketing of the products of these mines entail the smelting of all of the high-grade ore and the bulk of the silver (in form of concentrates) of the low-grade (milling) ore, and, due to the customary nature of smelter contracts, returns are not received until five or six weeks after the completion of the four-weekly periods. Attempts at *estimation* of the production have, in the past, proved unsatisfactory, and, to ensure regularity in the published returns, the custom followed is to issue these returns six weeks after the close of each period. When it is recalled that these mines are situated over 4,000 miles from London, where all the products are marketed, and that constant interference with the cable and shipping service exists, due to war conditions, we contend that the issue of these returns to the Press, as shown in the table below, are the reverse of "spasmodic and belated":—

Completion of the Four-weekly Period	Six Weeks after Completion of Period	Date of Issue to Press of Returns
Jan. 28, 1915	Mar. 11, 1915	Mar. 12, 1915
Feb. 25, ..	April 8, ..	April 9, ..
Mar. 25, ..	May 6, ..	May 7, ..
April 22, ..	June 3, ..	June 12, ..
May 20, ..	July 1, ..	July 2, ..
June 17, ..	July 29, ..	July 30, ..
July 15, ..	Aug. 26, ..	Aug. 27, ..
Aug. 12, ..	Sept. 23, ..	Sept. 27, ..
Sept. 9, ..	Oct. 21, ..	Oct 25, ..
Oct. 7, ..	Nov. 18, ..	Nov. 24, ..

Before the publication of your article, in order to make sure that shareholders, who had by any chance not seen the published statements, should receive the returns promptly, the board had commenced to send these returns to each individual shareholder by post.

With regard to publishing the proportion of silver produced in high-grade ore, past records of the larger companies show that over an annual period this does not vary greatly, though for short periods, such as monthly or four-weekly, fluctuation is bound to occur, due to the very nature of the class of mining involved. Only averages over long periods give a fair idea of results at Cobalt, and that is the reason why companies, who have adopted a sound mining policy there, consider that "scrappy" information intermittently given would, in the case of this camp, have pernicious results.

On the other hand, it is the practice and intention of the Canadian Mining Corporation, in their annual reports, to give as full and complete information as is available.

That the "holders of large numbers of shares" should control an undertaking does not strike us as unusual or undesirable.

In conclusion, we would refer you to the reports of the Consulting Engineer of the Canadian Company, published in June 1914 and June 1915, where the factors mentioned above are emphasised.—Yours faithfully,

CANADIAN MINING CORPORATION, LIMITED.
V. LAYMAN, Secretary.

Balfour House, Finsbury Pavement, London, E.C., December 9, 1915.

[The introduction of the above very lengthy letter conveys that the opinion is held that THE STATIST is unaware of mining conditions in the Cobalt field. But it is consequent on knowledge, that, in no inimical spirit, we controvert some of the statements and still press for more information to be afforded to shareholders.

The letter says: "The life and proper development of large properties there [at Cobalt] depend upon the discovery of new veins by exploration work," which bears out what we said last week, viz.:—

> "It is particularly important that high-grade ore should continue to be found, and consequently, if very rich discoveries have been effected since the last annual reports, official silence in the matter is inexcusable."

Therefore we contend that information in regard to current development results should not be entirely withheld, as it is at present. The mine manager makes periodical reports on the progress of development work and the results shown, and shareholders are surely entitled to a summary of these reports, say every three months, instead of being compelled to wait until the annual report is issued some months after the close of the year in which the work is done. We did not mention anything about a "four-weekly statement of ore reserves," and we certainly did not advocate the "futile practice" of publishing the news "on each occasion when the cross-cuts encounter a vein." Neither did we say that "the administration of the Company is slack," or that "official information is altogether lacking." We said there was slackness of "the administration of the Company *in the matter of issuing reports*," and that "official information *in regard to current development results* is altogether lacking." As to the spasmodic appearance of the monthly returns, this has been our experience, notwithstanding correspondence in the past with the Company and its press agents.

We do not see why the Company should not give the amount of the high-grade ore shipped each month and the silver contents of same. In this way only can the fluctuations in the monthly receipts and profits be explained. The absence of the information prevents the proper understanding of the Company's progress. The information given in the Corporation's four-weekly returns is certainly "scrappy," to borrow a word from the letter. At present this four-weekly statement takes the following form:—

CANADIAN MINING CORPORATION, LIMITED.
The following cable states:—

For the Four Weeks ended August 12, 1915.

Value of production and profits of Reduction Co.		£40,420
Operating cost at mines	£19,479	
Special expenditure	1,669	21,148
Profit at mines		£19,272
Total footage	1,256	
*Total tonnage	10,473	

*Earlier returns gave "Tonnage milled."

Does this give the proper information to shareholders? We hold it does not. Was the milling ore responsible for the whole of the revenue? Of course not. The high-grade ore, not mentioned, was the principal contributor. Then should not the quantity of this high-grade ore be given? How was the revenue obtained? Of course from silver. Is anything said about silver? No! Why should not the silver production be given? Again, why should the receipts from silver production and profits of Reduction Company be lumped in one item? The value of the silver output should be stated separately, as well as the output of silver in ounces, which would show the price realised—a very important consideration. The receipts from the Reduction Company should be shown apart—strictly speaking, they should be deducted from the working expenditure, as the Reduction Company makes its profits by charging too much for the milling of the Corporation's ores and then repays those profits to the Corporation.

If the directors of the Corporation really desire to meet our criticisms there should be issued, say every three months, a summary of the Mine Manager's reports on the results of current development work, and there should be an alteration of the four-weekly return of earnings and profits so as to give a true picture of the results, say as follows:—

		Tons.
High-grade ore shipped		
Ore milled		
Total ore		
		Oz.
Silver output from high-grade ore		
Silver output from milling ore		
Total silver output		
		£
Value of total silver output		
Add profits from Reduction Co.		
Total revenue		
Operating cost at mines	£	
Special expenditure	£	
Total expenditure		
Profit at mines		

With reference to the fast paragraph but one of the letter, we did not say it was unusual or undesirable that holders of large numbers of shares should control an undertaking. We said:—

> Official information in regard to current development results is altogether lacking; and this is a serious matter for individual shareholders and the Stock Exchange, having regard to the fact that the holders of large numbers of shares have the controlling of the undertaking, and, therefore, know the development disclosures not officially published. In making these remarks we have in mind the fact that in recent months rumours in Canada and newspaper paragraphs have appeared stating that rich development disclosures have been made, especially in the City section of the properties, and also beneath the Cobalt Lake, now drained of its water. But we have seen no official confirmation or denial, and we are informed by the London office that current development results are not published.

ED. "THE STATIST."]

MISSOURI, KANSAS AND TEXAS RAILWAY.

REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 1915.

St. Louis, Missouri, September 15, 1915.

To the Stockholders:

The directors and officers of your Company submit herewith their report for the fiscal year ended June 30, 1915.

The operations of the Lines named—

	Miles.
Missouri, Kansas & Texas Railway Company	1,744.41
The Missouri, Kansas & Texas Railway Company of Texas	1,791.98
The Wichita Falls & North-Western Railway Company	328.68
Total miles operated June 30, 1915	3,865.07

were as follows :—

RESULTS FOR THE YEAR.

Intercorporate items are excluded	$	Inc. or Dec. $	Inc. or Dec. %
Operating revenues	32,898,758 59	+ 980,834 54	+ 3
Operating expenses	22,967,591 84	− 259,240 60	− 1
Net operating revenue	9,931,166 75	+1,240,075 14	+ 14
Taxes	1,327,870 97	− 171,649 92	− 11
Operating income, taxes deducted	8,603,295 78	+1,411,725 06	+ 20
Miscellaneous income	214,834 37	− 2,444 18	− 1
	8,818,130 15	+1,409,280 88	+ 19
Rentals and other payments ...	862,679 88	+ 312,929 04	+ 57
Income available for interest ...	7,955,450 27	+1,096,351 84	+ 16
Interest (81 per cent. of amount available)	6,480,465 19	+ 160,593 50	+ 3
Net income	1,474,985 08	+ 935,758 34	+174
Dividends declared during year on subsidiary cos.' stock outstanding...	1,012 52	—	—

Comparisons include restatement of 1914 figures to conform with I. C. C. Classification effective July 1, 1914.

MILEAGE.

There was no change in mileage owned or operated. Table 1, pages 15 and 16 [of Pamphlet Report], shows the mileage in detail.

OPERATIONS.

Table 2, on page 17, contains the classified income account.

Revenue from freight traffic increased $2,169,026.95, or 11%, chiefly from grain, cotton, oil, and miscellaneous freight. This increase would have been considerably greater if the European situation had not so seriously affected business conditions in the Southwest, particularly in Texas and Oklahoma, by depressing the price of cotton and seriously impairing the purchasing power of the country. This condition, and the interruption of international commerce, stagnated trade.

Passenger traffic suffered severely from the adverse business conditions, the loss in passenger earnings amounting to $1,009,178.83, or 11%, while the service rendered was practically the same as in the preceding year.

The decrease of $101,032.62, or 11.7%, in express revenues resulted almost wholly from the reductions in express rates made by the Inter-State Commerce Commission.

Floods and washouts were again prevalent during the spring months, interrupting traffic and increasing expenses of operation, but the operating results for the year show a satisfactory decrease in the expenses, as a whole, particularly in the transportation expenses, and a reduction in the operating ratio from 72.77% to 69.81%. The acquisition of thirty new Mikado-type freight engines, which were placed in service during July 1914, enabled the movement of heavier tonnage trains and contributed to the results obtained.

Under the decision of a board of arbitrators, increased wages were awarded engineers and firemen of the Western railways, involving an additional expense to your Company, ranging from $40,000 to $60,000 per annum, effective May 11, 1915.

FINANCIAL.

The changes in outstanding capital stock during the year, as shown by the balance sheet, were as follows :—

	Increase. $
Wichita Falls & Southern Railway Co.	$100 00
San Antonio Belt & Terminal Ry. Co.	800 00
Net increase	$900 00

The changes in funded debt in hands of the public during the year were as follows :—

	Inc. or Dec.
M., K. & T. Ry. Co. 5% Equipment Notes	−190,000 00
Boonville RR. Bridge Co. 1st Mortgage 4% Bonds	− 11,000 00
South-Western Coal & Improvement Co. 1st Mortgage 6% Bonds	− 90,000 00
M., K. & T. Ry. Co. of Texas 10-Year Equipment Notes, Series A, 5% Serial of 1914	+646,000 00
W. F. & N. W. Ry. Co. 1st Mortgage 5% Bonds	− 34,000 00
W. F. & N. W. Ry. Co. 1st Lien Collateral Trust Mortgage 5% Bonds	− 13,000 00
W. F. & Southern Ry. Co. 1st Mortgage 5% Bonds	− 12,000 00
M., K. & T. General Mortgage 4½% Sinking Fund Gold Bonds purchased for Sinking Fund (held alive by Trustee of the Mortgage)	−675,000 00
Net Decrease	$379,000 00

Other changes in Funded Debt as shown by condensed balance sheet of June 30, 1915, published on a subsequent page were :—

	Increase.
M., K. & T. Ry. Co. Consolidated Mortgage 5% Bonds ...	$1,432,000
which were issued for the following purposes :—	
In reimbursement of expenditures made for additions and betterments	$503,000
Against M., K. & T. Ry. Co. General Mortgage Bonds retired by Sinking Fund	675,000
Against Boonville Railroad Bridge Company First Mortgage Bonds retired by Sinking Fund	8,000
Against the pledge of First and Refunding Mortgage Bonds of the Wichita Falls & North-Western Railway Company acquired during the year	38,000
Against M., K. & T. Ry. Co. Equipment Notes of 1913 retired ...	208,000
Total	$1,432,000

All of the above-mentioned Consolidated Mortgage Bonds were pledged as collateral for loans.

An equipment trust for $680,000, dated July 15, 1914, covering 30 Mikado-type freight locomotives and 200 convertible ballast cars costing $900,610.75 was created by the Missouri, Kansas and Texas Railway Company of Texas. The equipment trust notes bear 5% interest, and mature $34,000 semi-annually, on January 15 and July 15 until 1924.

$19,000,000 Two-Year 5% Secured Gold Notes of the Missouri, Kansas and Texas Railway Company matured May 1, 1915. Conditions did not, at the time, permit of a sale of long-time bonds or other securities of your Company in sufficient amount to pay off the maturing notes, and your Directors accordingly requested the note holders to extend their notes for one year at 6% per annum instead of 5%. Holders of about 95% of the notes responded to this request and deposited their notes with the Trustee for extension. Your Company also arranged at the same time to extend for one year, at 6% interest, payment of $2,733,250 short-time bank loans which had matured. In connection with the extension of the maturing notes and loans, your directors announced that a Committee of Directors of the Company have under consideration plans for the readjustment of its financial position.

ROLLING STOCK.

The equipment inventory as of June 30, 1915, was as follows :—

Locomotives	668	Increase 12
Passenger-train cars	507	Decrease 4
Freight-train and miscell. cars owned and leased ...	26,280	Decrease 518

Thirty new Mikado freight locomotives and 200 convertible ballast cars were received and placed in service during July 1914.

The average amounts expended for repairs to equipment in service were :—

		Inc. or Dec. $	Inc. or Dec. %
Locomotives	$2,508 16	+ $379 21	+17.81
Passenger-train cars	658 18	− 36 65	− 5.27
Freight-train and miscell. cars ...	60 22	+ 3 69	+ 6.52

Satisfactory progress has been made in reducing deferred maintenance of equipment, particularly locomotives, 530 having been rebuilt or given general repairs; 129 locomotives, or 19.3% of the number owned, and 1,667 freight cars, or 6.73% of the number owned, were undergoing or awaiting repairs at the close of the year.

The average tractive power of locomotives in service increased 1,413 pounds, or 5%. The average capacity of freight cars in service increased 810 pounds, or 1.3%.

Locomotives and cars are being equipped with safety appliances and mail cars are being changed according to requirements of the Federal Government.

Eighteen locomotives, 5 passenger cars, 1,049 freight cars, including cabooses, and 29 work cars were retired from service during the year.

There was expended during the year for the purchase and construction of new equipment $1,061,821.11. The value of equipment retired during the year was $712,706.50, leaving a net increase of $349,114.61 in the value of equipment owned.

The value of equipment to be replaced as of June 30, 1915, was $843,000.59, which value will be replaced as rapidly as practicable.

The annual rate of depreciation on equipment was fixed at 2% on February 1, 1915, and the amount charged to operating expenses for depreciation during the year was $341,637.43, an increase of $238,673.10 over the preceding year. The amount of accumulated depreciation on June 30, 1915, was $1,493,531.97, an increase of $273,643.73. This charge for depreciation was in addition to the amount charged to operating expenses on account of retirements during the year.

ROADWAY AND STRUCTURES.

Heavy rains which continued over practically the entire line during the last four months of the year resulted in daamge to roadway to the extent of $142,500.

During the year $1,493,612.16 was spent for permanent

additions and betterments to the property, exclusive of equipment. The more important items of improvement were as follows :—

Twenty-eight miles of new 85-pound rail was laid, replacing 66-pound rail on main line of the San Antonio and Houston Divisions. The 66-pound rail released was used on lighter traffic lines of the Greenville and Stamford Divisions, releasing 56-pound rail requiring renewal.

Fifty-nine miles of new ballast was applied and 254 miles of track was reballasted.

Tie renewals were heavy during the year, 1,665,156 cross ties and 748 sets of switch ties having been used.

There were 19 miles of yard and industrial tracks constructed.

Eighteen miles of embankments were widened and 43 miles of ditching was done.

Eight miles of new right-of-way fence was constructed and 255 miles of old fence rebuilt.

A number of bridges have been replaced with heavier structures, and many wooden structures have been renewed with concrete, reducing fire hazard and maintenance cost.

New passenger station at Cushing was finished June 7, 1915. New depots were also provided at Burleson, Como, and Calera; also a number of miscellaneous small buildings for Company service at different points. Various other depots, Company buildings, and station platforms were remodelled or extended to meet growing traffic requirements.

Interlocking plants have been installed jointly with the St. Louis South-western Railway at Whitewright, Texas, and with the Atchison, Topeka and Santa Fe Railway at Erie, Kansas.

Stock pens, with scales, where required for development of traffic, have been provided at a number of points.

Considerable reconstruction and general repairs of telegraphic lines on the property have been done.

SAN ANTONIO BELT AND TERMINAL RY. CO.

Since its entrance into San Antonio the Missouri, Kansas and Texas Railway Company of Texas has used the terminals of the Galveston, Harrisburg and San Antonio Railway Company (Southern Pacific). They are inadequate to the needs of both companies, and your management has long faced the necessity of providing separate and independent terminals at San Antonio. With this in view, the San Antonio Belt and Terminal Railway Company was organised May 2, 1912, with a capital stock of $175,000, all of which is owned by your Company. This Terminal Company has acquired land for freight and passenger stations, industries, and outside yards at convenient and accessible points. The site for the freight and passenger stations is in the centre of the city and more conveniently located than the stations of any other railway entering San Antonio. A franchise has recently been obtained from the city of San Antonio, and the work of constructing the terminal will be prosecuted with such expedition as your Company's finances will permit. The estimated cost of the project is $1,300,000, of which $774,906.38 has already been expended.

San Antonio is an important city of 96,614 people (Census of 1910), growing rapidly, and its location with respect to South-west Texas and Mexico insures its future commercial expansion. Your Company expects that its San Antonio earnings will be largely increased by providing its own terminals.

GENERAL REMARKS.

The new Union Station at Kansas City was completed and opened for service November 1, 1914. The new terminal has greatly facilitated the movement of traffic through this gateway.

The construction of the new union passenger station and facilities at Dallas is progressing satisfactorily, and it is expected the new terminal will be ready for use early in 1916.

A new three-storey General Office Building at Parsons was completed May 20, 1915.

The suit of your Company to recover from the United States a grant of land through the old Indian Territory, now Oklahoma, of a probable value of $60,000,000, which has been prosecuted in various United States Courts for the past eleven years, was finally decided against your Company by the United States Supreme Court. In effect, the Court held that the land covered by the terms of the grant never became "public land" of the United States within the meaning of the Act, and for that reason the Company acquired no rights therein or thereto.

The Supreme Court of Missouri has decided in favour of the railroads the suits brought by the Attorney-General of the State against the railroads of Missouri for refunds growing out of the old Missouri rate case. The effect of this decision is that the Attorney-General cannot prosecute suits on behalf of shippers and passengers.

A suit brought by the State of Kansas, on account of alleged violation of the Kansas laws pertaining to general offices, was compromised and a final judgment pursuant thereto entered of record. This compromise agreement and decree have been carried out by the construction of a general office building at Parsons, and by the establishment therein of the offices and office forces required.

Determined efforts are being made by the railways of the South-west to procure increased passenger and freight rates. Applications are now pending before the Inter-State Commerce Commission, the Public Service Commission of Missouri, the Public Utilities Commisson of Kansas, and the Railroad Commission of Texas. The railroads have submitted their evidence and decisions are expected this fall.

In the suit pending in the Federal Court involving the two-cent passenger rate established by the State of Oklahoma, the taking of testimony has been under way for some time, and it is hoped that the trial will be concluded this autumn.

In the Western advanced freight-rate case, decided by the Inter-State Commerce Commission August 10, 1915, increased rates were granted on certain freight traffic which will add probably $133,000 a year to your Company's net revenue.

On August 16, 1915, the Texas Gulf Coast was visited by a severe storm, causing considerable loss of life and enormous property damage in the City of Galveston, as well as at Texas City and other Gulf points. The Galveston causeway was partially destroyed and railroad communication with the island was cut off for a period of 17 days, during which time export traffic was seriously impeded.

During the year Messrs. Henry E. Huntington, Alfred J. Poor, E. B. Stevens, and Frank A. Vanderlip retired from the board. The following were elected directors to fill vacancies :—

Messrs. W. W. Brown, of Parsons, Kansas; Edward A. Faust, of Saint Louis, Missouri; Lewis B. Franklin and A. J. Miller, of New York City; D. W. Mulvane, of Topeka, Kansas; George W. Simmons, of Saint Louis, Missouri; Edward R. Tinker, of New York City.

Messrs. Harry S. Black and Frank H. Davis were elected members of the Executive Committee.

Mr. W. A. Webb, formerly General Manager, was appointed Vice-President on February 1, 1915.

Statements and tables of accounts and operations are appended to this report.

By order of the Board of Directors,

FRANK TRUMBULL, *Chairman.*
C. E. SCHAFF, *President.*

	$445,994 76
Balance to credit of Profit and Loss, June 30, 1915	$6,408,080 56

New York, October 15, 1915.

Since the preparation of the foregoing report, Mr. Charles E. Schaff has been appointed Receiver of the Missouri, Kansas and Texas Railway Company by the United States District Court at St. Louis, Mo., and Receiver of the Missouri, Kansas and Texas Railway Company of Texas by the United States District Court at Dallas, Texas, effective public on September 27, 1915 :

The board made the following announcement to the public on September 27, 1915 :

"The directors reluctantly acquiesce in the receivership, but as several suits have been brought against the Company by holders of unextended notes, aided in several cases by attachment proceedings, and other suits have been threatened, it was decided that the interests of all would be best served by assenting to the taking charge of the property by the Court.

"The directors and officers were hopeful last spring—when they asked for an extension of these notes for one year—that they would be able to work out a plan of refinancing that would enable the Company to pay them off, and they have been continuously, since then, endeavouring to accomplish this, but, owing to apathy of investors towards railroads and to the heavy losses in the Galveston storm and continued floods in the South-west, which have impaired the earnings of the Company and increased its expenses, it has been impossible to accomplish what the directors set out to do. They are, however, still proceeding, in co-operation with bankers, with the preparation of a plan for readjusting the finances of the Company and providing for its future requirements.

"The board is gratified that the Court has appointed Mr. Schaff as sole Receiver. He enjoys and deserves the confidence of all interests."

FRANK TRUMBULL, *Chairman.*

CONDENSED GENERAL BALANCE SHEET, June 30, 1915.

NOTE.—There exists a possible liability in connection with State rate cases under appeal.

MISCELLANEOUS.

ADELAIDE ELECTRIC SUPPLY COMPANY.—Final dividend of 5 per cent., making 10 per cent. for the year, together with a bonus of 2 per cent., both tax free, on Ordinary.

ALEXANDRIA WATER COMPANY.—Interim dividend of 4*s.* per share, tax free.

ATTAREE KHAT TEA COMPANY.—Interim dividend of 6 per cent., less tax, on Ordinary.

BANK OF BRITISH WEST AFRICA.—Branches of this Bank have been established at Casablanca, Morocco, and Kofo-ridua, Gold Coast Colony.

BARGANG TEA COMPANY.—Interim dividend of 15 per cent., less tax, on Ordinary.

BORELLI TEA COMPANY.—Interim dividend of 5 per cent., less tax, on Ordinary.

BORBHEEL TEA COMPANY.—Interim dividend of 15 per cent., less tax, on Ordinary.

BORDUBI TEA COMPANY.—Interim dividend of 6 per cent., less tax, on Ordinary.

BREWERS' SUGAR COMPANY.—Dividend of 14*s.* per share, tax free, on Ordinary.

BRITISH INDIAN TEA COMPANY.—Interim dividend of 2½ per cent., less tax, on Ordinary.

BRITISH TOBACCO COMPANY (AUSTRALIA).—Interim dividend of 3 per cent. on Ordinary.

CASTLEMAINE BREWERY, MELBOURNE.—Further dividend of 3½ per cent., making 7 per cent. for the year.

CHICAGO BREWERIES.—Dividend at the rate of 4 per cent., less tax.

DHENDAI TEA COMPANY.—Interim dividend of 3 per cent., less tax, on Ordinary.

DOOARS TEA COMPANY.—Interim dividend of 1*s.* 3*d.* per share.

EASTERN TELEGRAPH COMPANY.—Third quarterly interim dividend of 1¼ per cent. on the Ordinary stock, tax free.

EMPIRE OF INDIA AND CEYLON TEA COMPANY.—Interim dividend of 9*d.* per share.

GHOIR ALLIE TEA COMPANY.—Interim dividend of 40 per cent., tax free, on Ordinary.

GOLDSBROUGH MORT AND COMPANY.—Interim dividend of 5 per cent., less tax.

HARPENDEN (SELANGOR) RUBBER.—Third interim dividend of 25 per cent., less tax.

HUDSON'S BAY COMPANY.—Interim dividend on the 5% Cumulative Preference shares of the Company will be paid on January 1, 1916.

HUGGINS AND CO.—Dividend of 1*s.* per share on Ordinary.

IMPERIAL COLONIAL FINANCE AND AGENCY CORPN.—Interim dividend at rate of 5 per cent. per annum, less tax.

INGERSOLL-RAND COMPANY.—Cash dividend of 10 per cent. on Ordinary stock.

JAVA PARA RUBBER.—Interim dividend of 5per cent.

KACHARIGAON TEA COMPANY.—Interim dividend of 6 per cent., less tax, on Ordinary.

KEPONG (MALAY) RUBBER ESTATES.—Third interim dividend of 10 per cent., less tax.

LANKAPARA TEA COMPANY.—Interim dividend of 7½ per cent., tax free, on Ordinary.

LONDON AND LANCASHIRE LIFE AND GENERAL ASSURANCE ASSOCIATION.—Dividend and bonus for half year of 1*s.* 6*d.* per share.

SEABOARD AIR LINE RAILWAY.

REPORT FOR THE FISCAL YEAR ENDED JUNE 30, 1915.

Portsmouth, Va., October 28, 1915.

To the Stockholders of the Seaboard Air Line Railway:

The Board of Directors submits the following report of the operations of the property for the year ended June 30, 1915:—

INCOME ACCOUNT FOR YEAR ENDED JUNE 30, 1915.

	1915.	1914.	Inc. or Dec.
	$	$	$
Gross Revenue	21,280,462 79	25,420,503 24	−4,140,040 45

Balance	1,591,632 36	2,924,215 76	−1,332,583 40
Full 5% Interest on Adjustment (Income) Bonds	1,250,000 00	1,250,000 00	—
Net Income	341,632 36	1,674,215 76	−1,332,583 40

NOTE.—Revenue and Expense figures for the year 1914 have been revised for comparative purposes to agree with the Inter-State Commerce Commission's classification, effective July 1, 1914.

The Gross Revenue decreased 16.29%, Operating Expenses decreased 14.55%, Taxes increased 6.33%, Operating Expenses and Taxes decreased 13.42%, and Operating Income decreased 24.02%.

The Operating Expenses, exclusive of Taxes, were 70.12% of the Gross Revenue, as compared with 68.70% the previous year, and including Taxes, 75.11% of Gross Revenue, as compared with 72.63% for the preceding year.

MILEAGE OPERATED.

The mileage of the Seaboard Air Line Railway in operation on June 30, 1914, was		3,097.55
Extensions, &c., constructed during the year	26.41	
Less Spur Tracks taken up	.82	
		25.59
Mileage in operation June 30, 1915		3,123.14

CAPITAL STOCK AND FUNDED DEBT UNMATURED.

There has been no change in the capital stock or in the funded debt during the year.

EQUIPMENT.

An Equipment Agreement, Series "Q," was entered into on July 1, 1914, for the purchase of 10 Mountain Type Passenger Locomotives; 19 Mikado Type Freight Locomotives; 7 All-Steel Passenger Coaches, with reclining chairs; 8 All-Steel Passenger Coaches, with Walkover Seats; 5 All-Steel Mail and Baggage Cars; 7 All-Steel Postal Cars; 9 All-Steel Passenger and Baggage Cars; 9 All-Steel Express Cars; 462 Steel Upper and Underframe Ventilated Box Cars; for which $160,043.81 was paid in cash, and equipment trust obligations aggregating $1,440,000.00 were issued, payable in twenty consecutive semi-annual instalments of $72,000.00 each, bearing interest at the rate of 5% per annum. All of this equipment was received during the fiscal year.

EXTENSIONS.

Extensions to the Company's lines in Florida were completed during the year as follows: From Bartow, Fla., to Baynard, Fla. (Lake Wales Extension), 22.04 miles; Connor and Shallenberger Spur off Lake Wales Extension, 0.78; Pembroke, Fla., to Jumeau Phosphate Plant, 3.59; total, 26.41 miles; Spurs removed during the year, 0.82; net increase, 25.59 miles.

MAINTENANCE OF WAY AND STRUCTURES.

ROADWAY, TRACK, AND STRUCTURES.—Roadway, track, and structures of the railway have been properly maintained at a cost of $2,414,866.20, which represents an expenditure per mile of road of $777.59. (See General Remarks below.)

SIDE TRACKS.—13.07 miles of new sidings and extensions of existing sidings were constructed, and there were deducted by removal and changes of old sidings 5.33 miles, making a net increase over previous year of 7.74 miles. There were also added 1.75 miles leased sidings.

TIE RENEWALS.—Tie renewals were 1,328,761 cross ties and 745 sets of switch ties, and the cost, $583,594.83, was charged to Operating Expenses.

RAIL.—11.67 miles of new 85-lb. steel rail were laid in the main line, releasing therefrom 68 and 80-lb. worn rail, and there was charged net to Operating Expenses therefor $8,904.66, and to Capital Account $21,906.86. In addition, 11.31 miles of released 80-lb. steel rail were laid on branch lines, releasing 60-lb. and lighter rail, and there was charged to Operating Expenses therefor $3,117.62, and to Capital Account $14,898.98. There has also been received and distributed along the main line ready to lay 34 track miles of new 90-lb. and 26.5 track miles of new 85-lb. steel rail.

BALLAST.—73,269 cubic yards of gravel and slag ballast were put under main-line track, and of the total cost thereof $27,108.11 was charged to Capital Account.

TRESTLES FILLED.—990 lineal feet of wooden trestles were filled in during the year, and of the total cost thereof, including culverts, $11,141.48 was charged to Operating Expenses.

TRESTLES REBUILT AND BALLAST DECKED.—There were built during the year out of creosoted timber 2,904 lineal feet of ballast-decked trestles, replacing old open-deck trestles, and the cost thereof, $40,427.95, was charged to Operating Expenses.

TRESTLES STRENGTHENED.—Additional stringers were put in 19 trestles between Columbia, S.C., and Jacksonville, Fla., on the South Carolina Division, during the year to provide for the use of heavier power, the cost of which, $1,768.37, was charged to Capital Account.

BRIDGES.—Work has been done on sixteen bridges, repairing, adding signals, replacing with steel or strengthening them for heavier power. Of this number fourteen have been completed. Seven of the above bridges were authorised during this year, and five of the seven have been completed. One of the uncompleted bridges is a reinforced concrete viaduct for highway and street railway traffic on Duval Street, Jacksonville, Fla., over Hogan's Creek, and the tracks of the Seaboard Air Line Railway and the St. John's River Terminal Company. This viaduct will be completed during the coming year, and will be approximately 1,418 feet long, with a total width of 42 feet. Of the bridges completed the principal ones are: Fourth Street, Wilmington, N.C., reinforced concrete highway overpass, 70 feet; Alston Avenue, Durham, N.C., highway underpass, deck girders on concrete masonry, 90 feet; Eleventh Street, Charlotte, N.C., highway overpass, creosoted timber, concrete foundations, 89 feet; Armour, Ga., reinforced concrete double-track extension, Southern Railway overpass, 78 feet; Whitford Avenue, Atlanta, Ga., highway underpass, eye-beams on pile foundations, 56 feet; Howells Mill Road, near Atlanta, Ga., highway overpass, plate girders on creosoted timber foundations, 120 feet; Gaston Street, Chester, S.C., highway overpass, timber construction with concrete masonry, 80 feet. The total expenditures for bridge work during the year were $72,776.47, of which $71,046.92 was charged to Capital Account and $1,729.55 to Operating Expenses.

RAIL IN MAIN LINE.

The total operated main-line single-track mileage of the system, 3,123.14 miles, is laid with steel rails of the following weights:—

Miles.	Weight.	Miles.	Weight.
11.45	90-lb. rail	60.48... ...	63.5-lb. rail
361.08	85 „	3.95... ...	60.5 „
84.41	80 „	493.55... ...	60 „

The above does not include:—

SECOND TRACK.—Northward from Hamlet, N.C.: 9.09 miles, 90-lb. rail; .52 mile, 75-lb. rail. At Birmingham, Ala.: 1.43 miles, 75-lb. rail; 1.62 miles, 60-lb. rail. Raleigh, N.C., to Cary, N.C.: 5.88 miles, 85-lb. rail; 1.71 miles, 75-lb. rail. At Tampa, Fla.: 1.32 miles, 75-lb. rail.

LEASED LINES.—Silver Springs Branch: 1.20 miles, 60-lb. rail; .70 mile, 56-lb. rail. Amelia Beach Branch: 2.00 miles, 50-lb. rail.

MAINTENANCE OF EQUIPMENT.

The equipment of the railway was properly maintained during the year at a cost of $3,175,642.45. (See General Remarks below.)

Included in the cost of maintenance is $28,614.49, representing value of equipment destroyed or retired from service during the year and credited to cost of equipment.

There was also included in the cost of maintenance $412,626 for depreciation, which was credited to reserve for accrued depreciation.

The cost of maintenance per article owned was as follows:—

Average cost per annum per Locomotive owned	$2,095 69
Average cost per annum per Passenger Car owned	733 77
Average cost per annum per Freight Car owned...	54 11

GENERAL REMARKS.

On account of the European War the important agricultural and industrial activities served by your lines were affected, resulting in a decrease in gross revenues of $4,140,040, or 16.29%, as compared with the previous year.

This decrease was largely caused by the interruption of

the exportation of certain commodities, consisting principally of cotton, phosphate rock and naval stores, and the importation of fertiliser materials. The business depression resulting from the War also caused decreases in movements of lumber, fertiliser, general merchandise, and practically all other commodities. Weather conditions in Florida unfavourable to trucking also caused a decrease in the perishable vegetable shipments.

The general business depression caused also a decrease in passenger business.

As an offset against the decrease in revenue above shown a reduction was made in operating expenses amounting to $2,541,172, or 14.55%. The greatest item of reduction was made in transportation expenses, consisting of $1,577,776, or 16.8%.

Realising at the outset of the European War that there was a necessity for the greatest possible economy, consistent with safety and proper upkeep, a careful and searching analysis was made of the proposed expenditures for maintenance of way and structures and maintenance of equipment for this fiscal year, and a plan laid out by which only such expenditures were made as were absolutely necessary to comply with the conditions above outlined. By these means your property has been fully maintained.

Extensive improvements and additions have been made to the general office building at Portsmouth, Va., which consisted of remodelling, with fireproof construction, the original building, adding two storeys thereto, and thereby providing modern office facilities. No promise has been made for the occupancy of these offices for any stipulated period, but it is felt that as long as the present conditions last the arrangement is of advantage to the Company.

During this year a contract was entered into with the Southern Railway, providing for the joint use of the Seaboard Air line and the Southern Railway's tracks between Raleigh, N.C., and Cary, N.C., as a double track, these tracks being immediately parallel for the entire distance.

1.32 miles of double track have been put into service at Tampa, Fla., from Tampa Northern Junction to Twigg Street.

A Union station at Bartow, Fla., has been built during the year, and the one at Hurtsboro, Ala., mentioned in last year's report, has been completed.

A passenger station has been completed at Marston, N.C., and the one at Rockingham, N.C., mentioned in last year's report, has been finished.

Combination passenger and freight stations have been constructed during the year at North, N.C., Terra Ceia, Fla., and Kingsland, Ga.

The freight depôt at Carrsville, Va., has been extended, providing passenger facilities therein. A freight depôt has been built during the year at Hawthorne, Fla.

At Apex, N.C., both a passenger station and a freight station have been provided, together with necessary track changes and additions to serve same.

The passenger shelter shed and granolithic walks at Portsmouth, Va., mentioned in last year's report, have been completed.

At Wake Forest, N.C., an umbella shed has been provided in connection with present passenger facilities.

A passenger shed has been provided at South Clinton, S.C.

A car repair shed has been provided at Cayce, S.C., in connection with other shop facilities.

Necessary dredging has been done at Jacksonville, Fla., in slip between Warehouse No. 2 and No. 3, to maintain proper depth of water, and necessary dredging is now in progress in slips 1, 2, and 3, and river front, at Hutchinson's Island, Savannah, Ga.

The reinforced concrete coal elevator with 300-ton storage bin at Savannah, Ga., mentioned in last year's report, has been completed.

The 100,000-gallon capacity steel tank, together with pipe lines for auxiliary fire protection, at Hutchinson's Island, Savannah, Ga., mentioned in last year's report, has been completed and put into service.

Modern interlocking plants have been provided at Burroughs, Ga., and Bartow, Fla., and the one at Pembroke, N.C., mentioned in last year's report, has been completed.

A wooden cotton platform has been provided at Greenwood, S.C., and a reinforced concrete cotton platform provided at Maxton, N.C.

Paving and street work have been done at Henderson, N.C., Columbia, S.C., Cordele, Ga., Columbus, Ga., Manatee, Fla., Bradentown, Fla., and at several other points on the system, to comply with municipal requirements.

Crossing gates have been installed at Hermitage Road, near Richmond, Va., and on Elmwood Avenue, Columbia, S.C.

A coal trestle has been built jointly with the Durham and Southern Railway at Durham, N.C., during the year.

Additional storage tracks have been provided during the year at Nitrolee, S.C.

Interchange tracks have been provided with the Maxton, Alma and Southbound Railroad at Alma, N.C., with the Norfolk Southern Railroad Company at Charlotte, N.C., and the Southern Railway at Franklin, Va.

Three track scales were rebuilt with concrete foundations and steel "I" beams, replacing wood.

Three old water tanks at McKenny, Va., Collins, Ga., and Palmetto, Fla., were replaced with modern 50,000-gallon tanks and suitable pumping facilities provided.

New water station has been provided at Schofield, S.C.

Sixty-five industrial sidings and extensions to industrial sidings already existing have been constructed or are in process of construction.

Forty depôts and freight stations have been constructed or substantially added to during the year.

Seventeen passing tracks have been constructed or extended or are in process of construction.

The use of creosoted piling has been continued in maintenance work on docks, wharves, and trestles.

The work of the Valuation Committee, created in connection with Section 19-A of the Federal Act to Regulate Commerce, referred to in the last annual report, was continued during the year at a cost of $57,215.39, which was charged to General Expenses—an increase of $42,232.10 over the preceding year.

W. J. HARAHAN, *President.*

MEETINGS
OF PUBLIC COMPANIES.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

THE seventy-fifth ordinary general meeting of this Company was held at the offices, 122 Leadenhall Street, E.C., on December 8, the Right Hon. Lord Inchcape, G.C.M.G., K.C.S.I., K.C.I.E. (the Chairman), presiding.

The Chairman, who was received with applause, said: Ladies and Gentlemen, we meet to-day under exceptional circumstances. Sir Thomas Sutherland, who occupied the Chair at our last meeting, and who had directed the affairs of the P. & O. Company for four-and-thirty years, retired a year ago. He brought the Company out of what might be described as a "slough of despond," and by his energy and ability he left it a sound and prosperous concern. I am sure you will all join with me in wishing him long life and happiness in his retirement, and if the P. & O. Company has any success in the future it will never be forgotten that it was owing to the masterful management of Sir Thomas Sutherland in its days of depression. He has left us a splendid legacy. With the loyal assistance of our staff it will be our earnest endeavour to carry on the administration of the P. & O. Company, not only to your satisfaction, but to the satisfaction of the Government and the public.

Good Service for the Country.

The year under review has been quite abnormal, owing to the War. No less than 42 steamers of the P. & O. fleet have been taken from their usual work from time to time, and 31 are still being made use of by the Government. The Board have in consequence had a considerable strain put upon them to maintain the regular mail services, but you will be glad to know that so far they have not been obliged to cancel a single departure.

Something like 480 of the P. & O. and British India officers and engineers have gallantly joined His Majesty's Service, mostly afloat, and are fighting for their country. Sixteen have been wounded, 27 have been killed. You will be glad to hear that one—a P. & O. cadet—the son of Mr. Drewry, our Works Superintendent, a boy of 18—has won the V.C. His father tells me the boy says he intends to return to the P. & O. Company after the War. Let us hope that he will win through and rise eventually to be Commodore of the P. & O. Fleet. The positions of our men for the most part remain open for them after the War, and meantime, as a rule, they don't suffer pecuniarily. The directors desire to express their appreciation publicly of the manner in which those who remain with us, who are doing good public service and running great risks, have responded loyally to the work, though the ships have in almost every instance been obliged to go to sea with less than their usual complement of officers and engineers. Their only complaint has been that they have not had an opportunity of doing more for their country. But when you consider that 42 ships out of our fleet of 60 have been engaged in Government service at one time or another, and that the ships which have remained to us have been carrying the mails and keeping up communications, I am satisfied you will consider that the men in the P. & O. vessels engaged in the Company's ordinary work have been doing good service for the country.

Increased Cost of Operating.

The cost of operating the ships has increased by leaps and bounds; wages have risen; the suppliers of stores of all descriptions have raised their prices, in some cases by 50%; while the cost of supplying coal at Port Said is nearly three times what it was before the outbreak of the War. Some six months ago we raised our passage rates two or three pounds to help to meet, to some extent, the increased cost of working, and, reluctant as we shall be to make any further increase, I am afraid this may be forced upon us.

Taxation.

The Budget will take something out of the Company's earnings, and what is left of the surplus over the average of the two or three preceding years will in all probability be to a great extent swallowed up in the impending overhauls of the ships through being hard-driven, and through difficulty in getting labour to do the repairs. We do not know what the future has in store in the shape of additional levies which will be made on you to meet the expenditure involved by the War. Whatever these may be they have to be met, and as our men of a fighting age are giving their lives, so must we give our property to the nation. No sacrifice is too great to secure that victory without which life would be intolerable. The levy of 30 millions on capital indicated by the Budget—a very moderate estimate, I think—will be lost to reproductive enterprise in this country. While it may help to pay the expenses of the War for the moment, I think it is recognised that it is not in the interests of the country to withdraw large sums from earning taxable revenue. When the War is over a large income will be required to meet obligations incurred by the War, to carry on the administration of the country and to pay for the country's defence. I am glad to observe that the Chancellor of the Exchequer has stated that the special levy on an increase in profits instituted in this emergency is not to form an integral part of the fiscal system of the country.

When Victory Comes.

When the War is crowned with victory for the Allies, as it will be, the resources of the country, the intelligence, the energy, the industry, and, let us hope, the thrift of the people will reassert themselves, and Great Britain will continue to be, as she still remains despite the demands upon her, the financial centre of the world.

No Fear of the Future.

There is no doubt that most shipping companies have made money during the last twelve months owing to the rise in freights, brought about by so many ships belonging to ourselves and our Allies having been engaged for the purposes of the War, and through the German and Austrian mercantile marine having been driven from the sea. The aftermath of the War has to be reckoned with, and the future of the shipping industry of Great Britain will doubtless have much to contend with, especially as neutral and some other shipowners who have been reaping a far richer harvest than British shipping will find themselves in a much better position to develop than will be the case with British shipowners; but, speaking for myself and for the P. & O. and British India Companies, I have no fear for the future. It may be an anticipation of coming bad times that is inducing some shipowners in this country to take advantage of the present inflated prices of ships to dispose of them and to retire from business. For the P. & O. and British India Companies there is no such *dolce far niente*. They are carrying on a national work, and they could not, if they would, wind up and go into retirement. On the contrary, they must and will continue to develop; they must endeavour, and they will endeavour, to maintain their services to the satisfaction of the Government and of the public. They must make provision for their employees when the time comes for them to coil up their ropes ashore; they must lay by ample depreciation for reinvestment in up-to-date vessels, and they must set aside a good margin of surplus profits in fat years to provide for the contingency of lean periods; and you must rest content with a return in the way of dividend which can only be described as moderate for the risks you run and for the capital you employ in your undertakings.

The Admiralty and the Mercantile Marine.

The steamers which have been commandeered by Government as armed cruisers, transports, and hospital ships are being paid for at rates leaving but a very moderate margin when everything is taken into consideration. The shipowners have met the Government fairly and reasonably, their disposition having been to aid the country in this national emergency. Only the other day a suggestion was made by the Admiralty to reduce rates for certain classes of ships which had been under charter for a considerable time, and despite the fact that freights in ordinary trades had advanced considerably, the shipowners agreed to the suggestion of the Admiralty. On the 2nd of last month I heard the Prime Minister's historic statement in the House of Commons as to our position after 15 months of war. He alluded to the fact that the Transport Department of the Admiralty had, since the War began, carried across the seas 2,500,000 officers and men, 320,000 sick and wounded and nurses, 800,000 horses, mules and camels, and 2,500,000 tons of stores and munitions. He said that these operations had involved thousands of voyages, and that they had been performed with less than one-tenth per cent. loss of life. He also said that these figures were exclusive of millions of tons of stores, mainly coal and oil, which had been carried for Allied Governments. I was delighted to hear the well-earned praise bestowed on the Transport Department of the Admiralty, the work of which has been enormous, and, if I may venture to say so, the way it has been carried out reflects the greatest credit on the Director, Mr. Graeme Thomson, and his lieutenants. I am sure in eulogising the Government Transport Department the Prime Minister meant to include the Mercantile Marine, which had provided the means of doing this service for the country and for our Allies. The shipowners by their enterprise provided the ships; they placed them at the disposal of the Government and maintained them in efficiency. The masters and

officers navigated them; the engineers did their duty below, bearing the greatest risk from submarines; and the crews have borne themselves with that courage which has always characterised not only the British seaman but the Lascar. Without the British Mercantile Marine where would the country have been in this War? The British Government did not possess a single transport, a single vessel adapted for the conveyance of munitions or stores or horses or mules or camels, or a single hospital ship. Why did the Admiralty not possess a fleet capable of doing that magnificent work of which Mr. Asquith spoke in such glowing terms the other night? I will tell you why. The Admiralty had far more sense. They had the plans and they knew the dimensions, the capacity, the equipment, the speed of every British ship afloat, and her whereabouts. They had been scheduling these in their own quiet way for years. They recognised that the most economical, in fact, the only possible plan, was to let the shipowners go on building vessels on their own account, running them in their ordinary trades without a farthing of expense to the country, because they knew when the hour struck and the Admiralty required their services, the ships would be at the disposal of the nation on perfectly reasonable terms, and in this they were right. There has long been a curious disposition on the part of some politicians and others to be what I might call in homely parlance "down" on the British shipowner. I don't know why, unless it is because a certain amount of success has attended his efforts, his energies and his enterprise. Unaided by Government favour, in spite of obstructions and difficulties which he has constantly had to encounter, he has built up a fleet and an organisation which is the envy of the world, and which the German Emperor was always urging Herr Ballin and other German shipowners to follow and surpass. The encouragement given by the German authorities was not only moral, but material.

The Suez Canal.

Between the months of November 1914 and February 1915 there were a few delays in the transit of steamers through the Suez Canal, caused by the action of the enemy, but thanks to our naval and military forces and to the resource and energy of the Canal Company's officials the delays were infinitesimal. The President and directors of the Canal Company invest their officials in Egypt with wide discretionary powers, unfettered by red tape, and these powers are invariably exercised for the benefit and convenience of the ships using the Canal, the attitude of the officials being invariably courteous and helpful. The advance of the Suez Canal Company's receipts has been checked by the War. In that Company's prosperity the shipowners hitherto have shared, advances in the rate of dividend having been accompanied by reductions in dues. For the year 1914 the Suez Canal dividend had to be reduced by 45 francs per share, but the shareholders accepted the reduction uncomplainingly, and the dues were not increased. For 1915 the reduced dividend will again operate, and it can only be maintained at the 1914 rate by wiping out the reserve set aside in the previous year. For 1916 the outlook is not bright, and the Canal Company propose to raise their charge by 50 centimes per ton from April 1 next; that is from 6.25 to 6.75 francs per ton. This will involve the P. & O. and British India Companies in a considerably larger expenditure for passing through the Canal. But I don't think we can reasonably raise any objection. The expenses of operating the Canal have increased considerably owing to the rise in cost of coal and stores, the standing charge can only be slightly reduced, while the franc is worth a good deal less in sterling than it was before the War, and the dues, as you know, are paid in francs. If the traffic decreases further we may have to face another rise, but if the traffic does not further decrease, or improves, as we hope it may, the 6.75 franc rate should remain. When normal conditions return we hope the Canal Company will be able to revert to the 6.25 rate, and we look forward to a gradual reduction from that figure to the 5 francs which we trust may be ultimately established. The Suez Canal Company has dealt reasonably and fairly with the shipowners in the past, and I feel satisfied that the shipowners will be disposed to meet the Company in the same spirit in the unfortunate position in which the Company finds itself placed owing to the War. The gallant French nation is making great sacrifices in blood and treasure to secure that victory on which we are all determined, and which will come to us in due time. A dividend of 120 francs per share will yield something under 3% on the value at which the shares have been bought by the great majority of the present shareholders, and this, I am sure, no one on this side of the Channel will grudge.

The Mail Service.

I have mentioned that over 50% of our steamers are in Government service. The bulk of the remainder of our fleet has been hard run, maintaining our onerous mail contract, and the demands on the limited space of our fast ships for the carriage of mails have been altogether unprecedented. Owing to dislocations in other quarters, and for other reasons, our ordinary mails have increased in bulk, while the letter and parcel mail to the Mediterranean and Egypt is ten times greater than it was some six or eight months ago. Our vessels have now to find accommodation for mails frequently occupying 1,200 to 1,800 tons of space, which leaves very little room for cargo, and we are obliged under our contract to carry all mails that are offered to us. We find ourselves in consequence under a considerable disability, but I make these remarks in no spirit of complaint; on the contrary, we have the satisfaction of feeling that we are doing our duty by the Post Office, which we have served now for an unbroken period of 78 years. I am sure the proprietors will support the Board in the attitude of reasonableness which they have adopted towards H.M. Government at the present time, even at some very considerable loss to themselves. To use the formula which was wont to appear in the good old days in the gracious speeches from the Throne, the P. & O. Company is at peace with all with whom it does business—the Admiralty, the Post Office, its fellow shipowners, its cargo constituents, its passengers, and its employees.

New Ships.

The War has made it impossible to lay down any new ships for early delivery in the past twelve months, all the yards being for the most part occupied with Government work, and the only vessels we have under construction are two high-class mail steamers. The Board, however, have an extensive building programme in view, and as soon as circumstances permit we shall arrange for the construction of a number of vessels, the plans and arrangements of which are being carefully considered, and the directors hope that before long circumstances may permit of their being able to place contracts for a number of vessels which will enable the Company to carry on its mail, passenger and cargo services to the satisfaction of the Government and the public, and to meet developments. The prices we shall have to pay will be high, but the directors feel that this should not deter them from keeping the fleet up to concert-pitch.

Ships Lost.

I regret to say that our cargo steamer *Socotra* has been wrecked in the English Channel since the issue of our report. She was homeward bound from Australia, and had no passengers on board, and there was no loss of life. Being 18 years old she stands at a low value in the Company's books, but she was a very useful ship, and can ill be spared at the present time. I am also sorry to say that a fine new British India steamer of 5,312 tons, the *Umeta*, of which we only got delivery from the builders a year ago, and which was engaged in Government service, has been torpedoed in the Mediterranean within the last few hours. The loss of this vessel falls upon the Government, but she cannot be replaced for many months. The fate of nearly half of the crew is not yet ascertained—they are reported as missing—while the other half has been landed at a Mediterranean port.

An Extremely Anxious Year.

You will realise that, with vessels constantly in the danger zone, the past year has been an extremely anxious one for the directors, and their anxieties do not grow less as time goes on and the danger zone enlarges. But I am glad to say that week after week, with unfailing regularity without exception, all through these sixteen months of war, the P. & O. mail steamers have started on their voyages from this country to the far ends of the earth with their usual complement of passengers just as in the times of peace. In seeing them leave Tilbury Dock with crowds on deck and handkerchiefs waving, in going up and down Channel with them, as I have frequently done, it has come home to me very closely how enormously we are indebted to the organisation of the Trade Division of the War Staff Department of the Admiralty, to its Chief, Captain Richard Webb, and to the British Navy generally for the protection of our ships. The Admiralty's confidential instructions to the Masters, which naturally I see in confidence, are marvels of thought, conciseness and simplicity, and it is to the strict observance of these by our Commanders and to the watchful care of our Navy that our freedom from disaster so far—in a good hour be it spoken—is to be attributed.

Gratitude to the Navy.

We cannot be too grateful to the Admiralty and to the Navy for the complete immunity from casualty from enemy ships with which the P. & O. vessels, their passengers, and their ships' companies have been able to sail the seas all through this War. Now that German intentions have been disclosed, the position in which this country would have found itself without an overwhelmingly strong Navy is not pleasant to contemplate. But for the Navy we should in these islands have been at the mercy of our enemy, and but for our sea power the British Empire would have been broken up. In looking back we can appreciate how justified was the public pressure which

was brought to bear from time to time to keep the Navy up to a high standard. The country owes a deep debt of gratitude to our Naval officers, and to Lord Fisher in particular, for their determination and foresight in planning that provision of naval defence which was necessary for our protection. To Mr. McKenna, above all others, we are indebted for the sea power which in the end, under the able direction, genius, and skill of Sir John Jellicoe, and those under him, will bring us out of this War with victory.

The Amalgamation with the B.I. Co.—Antioipations Realised.

You will be glad to know that the amalgamation of the P. & O. and British India Companies, which was completed about fifteen months ago, is working in every respect satisfactorily, and that considerable advantages have already been realised by the complete fusion of interests, and as time goes on these should be increased. After a year's experience of the administration of the two Companies, I am glad to say that the anticipations of eighteen months ago which led the directors to bring about the amalgamation are being realised. Our basis has been broadened, our interests are now in all respects identical, the combined experience of our staffs is a most valuable asset, while the financial assistance which one Company can render to the other has material advantages. It may be that in some years the P. & O. section of the combine will be good and the British India section will be poor, while the reverse may possibly happen; but we are sanguine enough to hope that, taken together, we shall be able to average out a modest return to the proprietors on what is, considering the intrinsic value and earning power of our joint assets, a very small capital.

Dividends and Income Tax.

When paying the interim dividend on our Deferred stock in the spring the board gave it—perhaps you may think too generously—free of income tax. The tax was then half-a-crown in the pound. Now it is considerably more, but having started on what you may regard as a rake's progress we propose, with your approval, to apply it to the final dividend and bonus, at least for this year. In speaking of income tax there is one small matter, personal to the board, which I must bring to your notice. Ever since the Company was established, or income tax introduced, the remuneration of the directors has been paid free of the tax, but though there is probably a resolution by the proprietors to this effect in the dark ages, so far I have failed to find it. As the tax has gradually gone up from 2*d.* in the pound to the figure at which it stands to-day, the directors think the matter should be brought to your notice and regularised.

Ample Depreciation Provided For.

The directors have made ample provision for depreciation, both in our ships and in our securities. Every penny not required in the business of both Companies has been lent to the Government to assist in financing the War, and on this course it is our intention to continue.

The Form of the Accounts.

In submitting our accounts to you to-day I hope you will accept them in the form in which they are presented by the board. I will forestall any criticism as to the absence of detail by saying at once that we have adopted this plan deliberately because we conceive it to be in the best interests of the proprietors. Were the accounts to be seen by our shareholders alone we should have no hesitation in presenting them in a much more detailed form, but in view of the keen competition which we may expect in the near future from neutral shipowners who have been coining money during the War, free from Budget levies, and in view of the renewed attacks upon our trade which we may anticipate not only from Germany and from Austria, but from others when the War is over, we see no advantage, but very much the reverse, in publishing your private affairs to the world. I feel satisfied that you will approve of the course we have adopted. So long as the directors have the confidence of the proprietors nothing more is required. No matter what the dividend may be, whether it remains as at present, whether it is increased or whether it is reduced, you may feel perfectly satisfied that not a penny will ever be distributed beyond the amount which the Company, after making ample allowance for depreciation and all contingencies, can well afford to pay. I beg to propose that the report and accounts be adopted.

Sir William Adamson, C.M.G., seconded the resolution, which was carried unanimously.

The Chairman next moved: "That a dividend for the half-year ended September 30 last of 2½% on the Preferred stock, less income tax, and a dividend of 5%, with a bonus of 5%, on the Deferred stock, free of income tax, as recommended in the report, be now declared, and that payment of the same be made on and after the 16th instant."

Mr. W. G. Rathbone seconded the motion, which was unanimously agreed to.

The retiring directors were re-elected, and a cordial vote of thanks was given to the Chairman, directors, and staff for their continued successful management of the Company's business, the meeting at the same time authorising the payment of the directors' remuneration free of income tax, and confirming the payment of such tax by the Company in the past.

The proceedings then terminated.

THE HORDEN COLLIERIES, LIMITED.

The fifteenth ordinary general meeting of the shareholders was held at the registered offices of the Company on Friday, November 26, 1915, Sir Hugh Bell, Bart., Chairman of the Directors, in the chair.

The Secretary (Mr. T. W. Marley) read the notice convening the meeting and also the auditors' report.

The Chairman: I have now to ask you to take as read the report and balance sheet, and to adopt the same. In doing so I am going briefly to call your attention to the position of the Company as it now stands. When I had the pleasure of meeting you a year ago we were just at the beginning of the period of the War in which we still find ourselves plunged. We had a couple of months' experience or thereabouts of changed conditions which none of us had anticipated. We were in that great confusion which had ensued upon the changed conditions under which work had to be carried on, and in that year the operations of which I had to present to you there were six or eight weeks of that condition of confusion. I was speaking then, as I am speaking now, two months or more after the conclusion of the period with which our accounts dealt, and one was able to say that things were settling down into what you may call the normal conditions in such abnormal circumstances. I have now to review a year the whole of which has passed under war conditions, and I think I may at once congratulate the shareholders in this Company on the way in which we have been able to meet the very untoward circumstances in which we found ourselves placed. It will be necessary to call your attention to figures which show how seriously we have been affected by them, and it is all the more to the credit of those who are directly charged with the management of your affairs that, in spite of these untoward circumstances, we are able to show so satisfactory a result.

The Balance Sheet

I ask you to turn to the balance sheet and see precisely what has happened in the twelve months. The first figure that meets one's eye is the figure of the nominal share capital of the Company, which now stands at a million. The £800,000 which stood in last year's balance sheet is now a million. You will recollect that, in spite of the circumstances which had arisen prior to the time I addressed you a year ago and after the circular to the shareholders in May, we determined, not without hesitation, to carry on the policy which we had then laid down and invite you to subscribe for the remaining 20,000 of the Company's shares. I need not recall to you the exceptionally favourable conditions under which we offered these shares to the shareholders. I am glad to say that our trust in your support has been amply fulfilled, and with the exception of a very small amount the whole of the shares we offered for your subscription was accepted. There remained a small balance, which we disposed of in the open market at a price above par, the effect being that the whole cost of the issue, which was not very great, was paid by the premiums we got on that small balance. The balance sheet shows that the share capital of the Company now stands at £931,060. There are some calls paid in advance—£5.917 10*s.*—making the total share capital at the moment the balance sheet was drawn up £936,977 10*s.* That figure will remain incomplete for a good many years to come, as, you recollect, we provided for the payment of the full amount of the new capital over a period of between four and five years, unless, indeed, the shareholders are pleased to pay their calls in advance. The Debenture stock amounts to £300,000, or with accrued interest £303,750. I think it is worth while adding these two figures together, because, after all, the real capital of the Company is not only the share capital but the borrowed money, and therefore you have invested in your undertaking the sum of a million and a quarter in round figures. Perhaps I ought to add to that amount the loans outstanding of £241,646. If I add that, you have in round figures a million and a half as the capital necessary to bring your undertaking to its present position. The next item is the loans which I have just mentioned, which are secured in part on the houses of the Company to the extent of £133,000 this year, against £126,000 last year, and the deposit loans £107,000 this year against £106,000 last year. That is an item on which I dwelt on former occasions, and I think it is a very creditable item to the Company. Our shareholders and others are ready to deposit money with us on terms which I think are very fair to them and very convenient to us, and there does not appear to be any disposition on their part to withdraw the credit they are willing to repose in our management. In regard to the debts due by the Company there is little to be said. Last year, for reasons that I gave, we specified separately the debts due by the Company on capital account and those due on ordinary working account. These circumstances no longer obtain, and we now state them in one amount—namely, £69,000. Your reserve

account, by the operation of your resolution, has been raised from £50,000 to £70,000. The profit and loss account I will postpone for the moment and will deal with it later.

Capital Expenditure.

On the other side of the balance sheet the first two figures calling for comment stand as before. On the Horden Colliery last year the expenditure stood at £591,826 16*s.* 11*d.*, and of that a sum of £38,885 has been written off. The Shotton Colliery expenditure stood at £274,290, to which we have added £14,528, and it now stands at £288,818 17*s.* We have written off £52,714. At Shotton we had expended a very large sum of money in the preceding year in completing the coke ovens. These are now completed, and the expenditure, therefore, is very much smaller than it was last year. At Blackhall the expenditure was £344,307 10*s.* 5*d.*, and we have spent £55,684 18*s.*, and it now stands within a few pounds of £400,000. In regard to these three items, I think it only right to say to the shareholders that, without committing ourselves in any way as to the circumstances that may arise to alter our present opinion, we are disposed to regard these three capital accounts as closed. The development of Horden is complete. Shotton with its coke works is now a complete undertaking. Blackhall is still in the process of development, but so nearly has it reached full development that we have thought we might properly put any further expenditure in development to working expenses. I am careful to say that I do not commit myself categorically to this proposition, but at the same time I think you may safely assume that unless something quite unexpected arises you will find very little change in the figures under these three heads.

The Building of Houses.

When I turn to the land and houses the circumstances are rather different. We cannot expect to cease the building of houses. We have not yet arrived at the full output of our pits, and as the output increases so it will be necessary to find accommodation for the men who are getting that increase of output, and accordingly I have no doubt that in the future you will find additions in that column for an increase of houses. Except Blackhall and Hardwick, practically the whole of the £438,269 is for houses. We have disposed of, under circumstances you are aware of, £190,765, and there remains £247,503 invested in houses, from which we have written off £1,000. There are now in course of construction 59 houses at Blackhall, and that will bring the total number built at all three places up to 2,170. We shall have to increase that number, and therefore there will be further expenditure under that head. You know the way in which we have dealt with these houses. We have so far as possible sold them and taken leases of them under circumstances which I think are favourable to the shareholders, and I hope I may appeal to the shareholders once more to assist us in our financial arrangements by purchasing houses from us as they have done in the past. Any action of that kind resembles the quality of mercy—it blesses him that gives and him that takes. You assist our finances, and we give you in return so good an investment that I may safely commend it to your consideration. The other items on the balance sheet refer to rents recoverable under colliery leases, debts due to the Company, £62,923; and stocks, £39,633; and finally cash at bankers, £45,383 7*s.* 1*d.* I am always glad when I owe my banker and he does not owe me. By paying the dividend, if you are good enough to agree to the proposition which I shall make shortly, you will probably place yourselves in the position of being in your banker's debt.

The Profit and Loss Account.

The net result of the year's working is shown in the profit and loss account. The profit on the collieries amounted to £102,502 14*s.* 1*d.*, compared with £128,847 11*s.* 6*d.* There has been a considerable fall in the total amount of the profits of the concern. That is due to the fact that the output of coal has considerably diminished. It might be expected that the price obtained for coal would largely increase, but that I shall be able to show is not the case. The fact of the matter is, we were a developing undertaking last year, with the prospect of an increasing output. We were obliged to provide for that development. We were selling in anticipation coal that we were justified in expecting to get. The War came, and instead of getting the coal our output is very seriously diminished. Although we did get some enhanced price for the coal, we had very large pre-War contracts which we shall have to implement, and the effect of all that is to reduce your profits by something like 25% between last year (of which only two months were in the War period) and this year, the whole of which is in the War period. There are sundry items which bring the total profit up to £103,895 18*s.* 4*d.*, against £130,219 last year.

Allocation of Profits.

In regard to its disposal we have set aside £10,220 for general depreciation, against £8,588 last year, and for freehold minerals £1,545. We have provided £6,000 for income tax—an item in regard to which there is uncertainty, as no one knows what it is going to be. That leaves £86,130 14*s.* 7*d.*, against £116,624 last year. There is considerable interest on Debenture stock and on new capital. This, with the interim dividend, absorbed £39,375. We paid an interim dividend of 2%. That was not paid without some hesitation on the part of the board. When the time came to determine what we would do with the surplus revenues we had received the conditions were very perplexing, and we hesitated whether we ought to pay any dividend at all. We came to the conclusion that it was right we should pay a dividend. We felt that many persons must be very seriously prejudiced by their income falling off, and we made a strenuous endeavour to remedy it as far as we could, and accordingly decided to pay you a dividend of 2%. I am glad to say the sanguine views that we took have been justified, and I am now able to inform you that, after placing a further sum of £10,000 to the reserve account, raising it to £80,000, we are able to declare a dividend of 5%, making 7% for the year. In reviewing the dividends we have paid in the past, I do not think anyone can say that this concern has paid undue amounts to its shareholders. We had a long period of development, lasting a considerable number of years, in which the shareholders had patiently to wait for a return on their investment. Since we were able to declare dividends these have varied from 4 to 12%. But since the beginning of the undertaking the shareholders have received on an average 5¾% per annum. In that are included the dead years of development. As time goes on the dead years of development will become a smaller proportion to the total period, and that figure will gradually become a larger one.

Mr. H. G. Stobart: Does that include the 7% of to-day?

The Chairman: Yes, it includes this year's dividend. I do not think that anyone will consider that is other than a very moderate remuneration to you for the risks that you undertook when you went into this concern.

Progress of the Company.

I have once or twice submitted to you some figures as to the distribution of the proceeds of industries such as that in which you are engaged. It may interest you that since the beginning of your undertaking you have paid in malt and meal—wages—to the extent of £2,927,253, or nearly £3,000,000. This includes not only the wages paid in cash to the men, but also cottage rents which you pay and are part of wages, and coals which are supplied to the men and are as much part of the wages as the cash they get. We very often hear loud complaints as to the amount received by royalty owners. You belong to this class yourselves, so that any condemnation falls on you who have a good deal of freehold of your own. The total amount paid to royalty owners was £201,215, so that if the whole amount paid had gone to wages it would not have come to 7% to the men in our employment.

Another figure of interest is the turn-over of a concern like ours, and it is of particular interest just now when you are in abnormal conditions. The net sales for last year amounted to something under £600,000 in round figures. Now, I have taken out the figures for various concerns in which I am interested, and in round figures the great productive industries in this country turn over their capital once a year. If you turned over yours once a year your income ought not to have been £600,000, but as near as may be doubled. It has not doubled and for two reasons. In the first place, in consequence of the War your output instead of growing last year has diminished.

The following figures show your progress since 1911 :—

Year.	Tons.
1911	1,124,289
1912	1,149,998
1913	1,313,812
1914	1,346,595

and if nothing had prevented us it is fair to assume it would have been fully a million and a half in the year ending September 1915, whereas it reached only 1,075,235.

But that is not all. The second point is, you have not reached anything like your full development. Mr. Prest tells me that when the development of the collieries is completed your total capacity of output will be something like two and a half millions, and that you will probably get two and a quarter millions. If you had that two and a quarter millions you will find that I shall not be far wrong if I say you will be turning your capital over once a year—including bye-products and everything.

The Future.

That, gentlemen, is the statement I have to make to you as to the position of your undertaking for the past year. One does not like to look into the future. We are still in the midst of a desperate conflict the ultimate outcome of which none of us doubts. If it is necessary to go on for another year we are prepared to go on for another year, and if that second twelve months is to be followed by yet another year we are willing to go on for another year, and then by yet another. The only thing we are not willing to do is to give up until we have got to the point at which we can have a durable peace. Now, if things continue as at present, that means very great sacrifices on the part of us all.

I think I may confidently anticipate that the readiness to make sacrifices will not be absent from those interested

in Horden. That that has been shown in the past is quite certain. Since the outbreak of the War nearly 2,000 of our men have responded to the call which the country made upon them. Of course, the effect of that appeal has been very prejudicial to you in the output of the collieries; but there is another consideration to which I think it is right to draw the attention of the shareholders, and that is that while a certain relaxation of the recruiting rules is being applied to men actually engaged in getting coal, these are not as yet being applied, as we think they should be, to men whose services are absolutely essential to the getting of coal—clerks and others, without whom we cannot carry on our work, are still being called upon to offer their services. At the present moment we are in negotiation with the authorities with the view to specifying those men that may be taken and distinguishing them from the men that may not be taken. We all have suffered very seriously from the way in which men very necessary to the carrying on of work have been taken on the ground that they do not come within the class who have been relieved from the obligation to enlist. That does not mean that the man who insists on going may not go, but it does mean that we want to have the right to say to a particular man, "No, you cannot go; you are essential to the carrying on of our work, and we must ask you to remain." There can be no doubt that is quite a reasonable contention on our part, because the efficiency of the nation for carrying on the War is dependent upon our being able to produce munitions of war, and without fuel we cannot do this, and therefore we are obliged to press on the Government the necessity of distinguishing these men who cannot properly be spared.

Government Interference.

And that brings me to another matter which I thought ought to be presented to you to-day; that is, the very serious interference that there has been with our freedom of action on the other side of the account—namely, in dealing with the produce of the pits. I am not complaining at all, but it is to be observed that in recent months the Government has interfered in all sorts of ways with our freedom of action. You may not ship coals without a permit. You may not sell coals for home consumption at more than a certain price above the figure you got at a certain period in the past, and so on and so on. Those who have had control in this matter have no doubt given this question careful consideration, but it is somewhat odd that at this moment, when the one thing we are desiring is to increase the exports of the country, difficulties should be put in the way of one of the most important exports—namely, coal. I have once or twice called attention to the number of persons interested in our proceedings, and it may be of interest to you to know that we have now 1,312 shareholders, of whom 1,116 hold under 100 shares each. Many of these are people whose income from your undertaking is an important thing for them, and whom we ought carefully to consider, and it was for that reason I made the remarks I did at an earlier period as to the distribution of profits. We have in addition 475 Debenture-holders, of whom 390 hold under £1,000 each. I do not know that we need be so much concerned about them, but in regard to the Ordinary shareholders I would like to add this, that in the recent distribution of shares among the shareholders we offered them at par. The reason we did that was that we felt these persons who had borne the heat and burden of the day in getting the enterprise on its feet ought to have their share of the realisation of profits. No doubt we made a present to the shareholders of something like £3 in respect of each new share. We were not unwilling to do that for the reason given. I am glad to think our action has met the approval of the shareholders.

Help for the Red Cross Fund.

Before I conclude I have a letter from our valued colleague Mr. Temple. With your permission I will read some extracts from it. He regrets that his condition of health renders it impossible for him to travel. He says: "I meant to have made a personal appeal to the shareholders, especially those who are not in some way helping the active service of our country, to support some of the many necessary societies and organisations which have been founded by large-hearted people to help to alleviate the trouble and suffering which this terrible War has caused; and I was going to say that, as we are enabled to declare so much larger a dividend than any of us thought possible at the beginning of the year, might I suggest that a little of that should be given at once to some of the organisations which may commend themselves to each shareholder? I feel it will be a gift—an investment, if you like—which we shall never regret." I leave it there, merely adding my own words of commendation of Mr. Temple's suggestions to your favourable consideration. It is only right to add that at a recent meeting of the Durham Coal Owners we heard an address from Lieut. Denis Bailey on the Red Cross. The coal trade of the United Kingdom has been asked to contribute a sum of £1 in respect of each thousand tons got last year, and the Durham Coal Trade, without binding any members of the trade, agreed to follow the example of other districts and make this contribution. If it is universally adopted—and I believe it has been very generally adopted—that will produce from Northumberland and Durham something like £50,000. We have agreed to give our contribution, which will come to something under £1,300. It will be just one donation, not an annual contribution. The purpose is to supply ambulance cars for use at the Front. Now, in the ordinary way of carrying on the War there is an ample supply of cars, but every now and then, when such events take place as the great battle of Loos in September, then the resources of the ambulance arrangements are sorely taxed. I am sure we should all be willing to give anything we possessed to prevent the suffering involved by men being left unattended for a moment longer than necessary. I feel certain it will commend itself to every one of you that we in our corporate capacity should contribute towards this very desirable object.

I hope I may allude without impropriety to the loss sustained by my friend on my left, who has learned of the death of his second grandson, who was left wounded on the field, and subsequently his body was recovered after several weeks. No one can doubt that any one of you here would have given anything in your power if it had been possible to recover that young man while still wounded. Mr. Hopkins will forgive me for alluding to his personal grief, and I offer him on your behalf and my own our sympathy.

Mr. W. R. Innes Hopkins: Sir Hugh Bell has not mentioned the matter to me, but I feel extremely grateful for his remarks.

The Chairman: I have now to move the adoption of the report and balance sheet, and I call upon the Managing Director to second.

"Taking Away with Both Hands."

Mr. E. R. Whitwell: Before seconding the resolution, I wish to associate myself not only with what the Chairman has said about the Red Cross Fund, but the way in which collieries have been treated by the Government. First of all, they raise our costs very seriously by their legislation, and in addition put obstacles in the way of getting ships for our coal which still further handicap us, and when they have done that they pass a law that we are not to sell our coals at more than a fixed sum above what it was two or three years before. It is not therefore a case of giving with one hand and taking back with the other, but of taking away with both hands! The Chairman's admirable remarks have left me very little to add. He has already named the reduced output, which has decreased 25%, instead of increasing 25%. That makes a great difference in the profits. Twenty-five per cent. added to our profits would have very nearly equalled what we made last year. Though we cannot grudge the men, we must remember that their absence means more houses and increased cost, because the wives of pitmen are still living in the houses and they get their coal free, and we are glad that this should be so. I admire the patriotism of those who have joined the Army, but this does not alter the fact that the quantity of coal raised in the past year is not two-thirds of what would have been the case, and that the development of Blackhall has been seriously delayed.

You will be pleased to hear that we have got a year's supply of pit timber in hand, as it is very hard to obtain, but, of course, we have had to pay very highly for it. One of the difficulties caused by the War is the scarcity of suitable timber.

As regards the coke ovens, I am glad to say they are working well and making a good quality of coke, for which there is a great demand. In the sales we have a great pull because all our seams are very exceptionally free from phosphorus, and for making hematite especially that is a most important point. The bye-products are exceptionally favourable in our case also, so that the coke ovens are doing very well.

I now have pleasure in seconding the resolution proposed by the Chairman.

The motion was then put and carried.

The Chairman then moved that a final dividend of 5% be paid, making 7% for the year, to the shareholders registered in the books of the Company on October 22, 1915, in respect of the share capital called up on or before October 1, 1914.

Mr. Whitwell seconded, and the motion was carried.

Re-election of Directors.

Mr. R. Grant, in moving the re-election of Sir Hugh Bell as a director of the Company, said he cordially endorsed the remarks of the Chairman as to the admirable way in which the executive had carried on the business of the Company during these troublous times; but he thought they would agree with him that the Chairman was a little modest, because, while the executive had had very anxious times, it had also been an anxious time for the Chairman and the other directors. The statement showed how excellently they had managed the concern for the past twelve months, and they were all indebted to them for that and also for the dividend they were now paying. He was very pleased to hear that the coal trade were making a contribution to the Red Cross Fund. He should personally have been very glad if the resolution had been that this contribution was to be continued not for one year only but to the end of the War. They had all, no doubt, in their small way done their little bit for all these associations to which Mr. Temple

had alluded in his letter; and he thought it was their bounden duty to do everything they could to assuage the suffering of their fellow-men in the conduct of this War. He should therefore have been only too glad if the coal trade had made it to the end of the War, and he trusted they would at the end of the twelve months continue it.

Mr. Robert Green seconded the motion, which was carried unanimously.

The Chairman said he was very much obliged to Mr. Grant for his kind remarks. He added that it was their duty to elect a director in the place of Mr. Temple. That gentleman had written to say that he was up for re-election, and that he was by no means sure that he was a "fit and proper person," as age came in so much, but he must leave himself in their hands entirely. If Mr. Temple did that, his colleagues on the board had no doubt about his being a "fit and proper person."

Mr. J. B. Smith then moved and Mr. S. T. Coulson seconded the re-election of Mr. Temple as a director, and this was carried unanimously.

Mr. G. B. Atkinson moved and Mr. M. Turnbull seconded the re-election of Messrs. W. B. Peat and Company as auditors, at a remuneration of £150 per annum, free of income tax, and this was carried unanimously.

Mr. B. C. Fry moved a vote of thanks to Sir Hugh Bell for his conduct in the chair, which was carried.

The Chairman, in reply, said he had already given testimony to the way in which the business of the Company was carried on, but he did not think they could separate without mentioning the admirable services rendered by Mr. Whitwell, the Managing Director, and Mr. Prest, and other members of the staff. They were unremitting in their attention to business, as was shown in the results obtained. He did not make any forecast in his remarks. It was said, "Never prophesy unless you know." He did not know whether anybody knew what was going to happen in the future. All one could say at present was that the present outlook of the coal trade in this country was not unsatisfactory, and he hoped when they met twelve months hence they might be able to report as well on the twelve months ending September 1916 as in 1915.

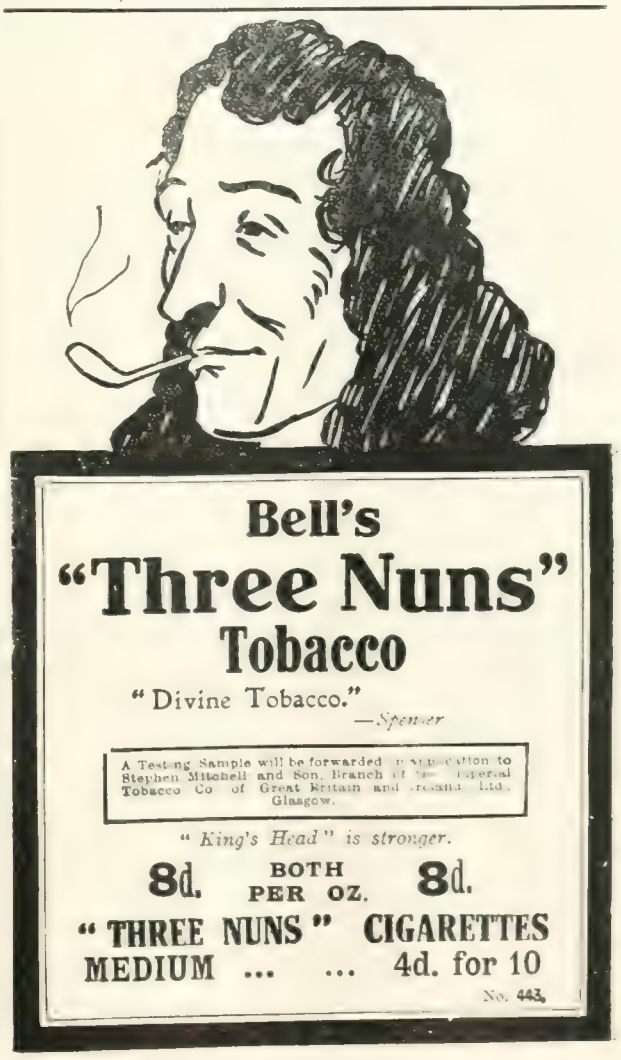
Mr. Whitwell: I am very much obliged to you on behalf of myself and the staff.

The meeting then concluded.

JOHN I. THORNYCROFT AND COMPANY, LIMITED.

An extraordinary general meeting was held on December 8 at Winchester House, Old Broad Street, E.C., Mr. John E. Thornycroft, M.Inst.N.A. (Managing Director), presiding.

The Chairman, in moving the adoption of the report and accounts, said: The position shown by the balance sheet is a very satisfactory one. You will note that the application money has been paid in respect of £50,000 War Loan stock, which has since been paid for in full under discount. The item of freehold and leasehold land and buildings, &c., formerly included patterns, drawings, and patent rights. As no value remains in the books in respect of these latter items the descriptive heading has now been included with the goodwill, which item now appears as goodwill, patterns, drawings, and patent rights, and stands in the accounts at the figure of £50,000. By reference to the report it will be seen that we propose to write off £49,000 of this amount, leaving the goodwill, patterns, drawings, and patent rights standing in the accounts for the future at the nominal sum of £1,000.



Profits and Dividend.

The net profits of the Company for the period covered by the accounts amounted to £244,826, and although our proposed method of dealing with these profits is clearly shown in the directors' report, I think some further explanation is necessary. Ordinary shareholders may rightly say that only a small proportion of the profits goes to them in the shape of dividends, although they are undoubtedly entitled to great consideration in consequence of the very lean years through which they have passed, when frequently they have received no dividends at all. Last May I referred to the fact that £90,000 had been spent in additions to buildings, plant, &c., since 1911. The necessary cash for this expenditure has been provided by the writing down of such items as Debenture issue expenses, patterns, drawings, patent rights, &c., out of profits, so that it may be said fairly that the whole outlay has been made at the expense of the Ordinary shareholders. The effect of this and further outlay during the War period has been to put the Company in a position to deal with an enormously increased output on a profitable basis. I want also to emphasise the fact that on all our work we are getting no better prices than our competitors. Within a month or two of the outbreak of war, and when we had been able to estimate to some extent the future prospects of business, we took the risk of placing very large contracts for material, and the period covered by the accounts now before you has benefited greatly by such contracts. Our turnover, as mentioned in the report, has been about four times the normal average, and this has been done and is still being carried on without any increase of issued capital or borrowed money. If you turn to the balance sheet, you will see that our capital in the business—that is to say, the assets, less the liabilities—is, roughly, £900,000 at July 11, 1915, being an increase over the 1913 figure of over £250,000, and this sum is provided out of profits, which means that such profits cannot be distributed, but must be kept in the business by writing down assets such as goodwill or creating reserve funds. A large working capital is necessary at the present moment, but after the War it will be still more necessary, so that we may have a good fighting fund to win back our commercial vehicle connection in particular, which has been built up with so much hard work and at such great expense, and now very largely lost by reason of American competition at a time when we are unable to supply by reason of Government work. Our works are in first-class condition to enable us to produce economically, and we shall have no fear of competition after the War, if only we are allowed to retain sufficient funds in the business.

War Taxation.

The last and most serious point which arises is the question of war taxation. The excess profits clauses of the Finance Bill are very complicated, and a basis of taxation can be arrived at only by negotiations in our case. Under those circumstances, it was felt that a very large amount must be transferred to a reserve fund in addition to the carrying forward of about £78,000. For the various reasons which I have referred to we did not consider it advisable to recommend payment of a larger dividend, and I hope that the shareholders will accept that view. Since the accounts were made up the turnover of the business has tended to increase still further, but there is very little likelihood that the profits will be on the same scale as during the first six months of this year. I have explained that we were in an especially advantageous position as regards contracts for purchase of material. This alone will make a very considerable difference to the results. There is every prospect of good profits being made while the present turnover continues, and, although the position as regards taxation under the income tax, excess profits tax, and controlled tax is by no means certain, shareholders may rely upon our doing our best to retain sufficient funds in the business to enable reasonable dividends to be paid and to enable us to build up a reserve to meet exceptional difficulties which will arise after the War by reason of heavy, and perhaps to some extent unsaleable, stocks. I now beg to move: "That the report of the directors now produced, together with the annexed statement of accounts at July 11, 1915, duly audited, be and they are hereby received, approved, and adopted."

Mr. Alexander Glegg, J.P., seconded the motion, which was carried unanimously, and a dividend of 10 per cent. on the Ordinary shares was declared.

PEKIN SYNDICATE, LIMITED.

THE ordinary general meeting was held on December 6 at the Cannon Street Hotel, Cannon Street, E.C., Mr. Thomas A. Barson presiding.

The Secretary (Mr. Thomas Gilbert) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said : Gentlemen,—I take it that you will adopt the usual practice of considering the report and accounts as read. On the debit side of the balance sheet the only item requiring any comment is "Liabilities on capital uncalled on shares," amounting to £294,008, an increase of £44,000 since the last balance sheet. This increase is our share of the uncalled capital in the Fu Chung Corporation, about which I shall have more to say later. On the credit side, you will observe that the cash at bankers and in hand amounted to £57,966, a decrease of about £112,000, which is mainly accounted for by the increase in the next three items, consisting of investments, shares in other companies, and debtor balances, while there is on the other side a decrease of over £17,000 in sundry creditors and credit balances. You will find a complete list of the investments embodied in the report, and you will be pleased to notice that the amount which has had to be written off for depreciation is only £27,446, against £63,389 last year. The securities may be regarded as first class and easily convertible into cash when occasion arises under normal conditions. The next item that claims attention is stock of coal and mining stores, which shows a reduction of £43,000 in the value of the coal in hand. This is mainly accounted for by, first : The policy forced on us of selling the stocks in hand, even at a loss, in order to maintain the position of the Syndicate in the negotiations which preceded the formation of the Fu Chung Corporation. Secondly, increased boiler consumption, amounting to over 34,000 tons. Moreover, and here a correction in the wording of the item is necessary, coal stocks are now valued at the price actually obtainable at the date of the balance sheet, instead of at the estimated cost, the basis previously adopted. Mining stores only are taken in at cost. As to the s.s. *Sir Richard Awdry*, you have read that she was sunk by enemy craft in the Mediterranean. The vessel was fully insured, not only to cover her cost, but also the substantial profit due to us from the charter made for her Mediterranean voyage. We shall receive payment on the 9th instant. After allowing the usual 5% for depreciation, there was a loss of £351 on the year's work ended June 30, and I do not think, with our past experiences as shipowners, we shall embark on a similar adventure again. (Hear, hear.)

Expenditure on Land, &c.

Leaving for a moment the item of concession, we come to the expenditure on land, property, machinery, plant, &c., which stands in at £682,361, representing an outlay during the year of £63,200. Included in this item is the loss on sales, amounting to nearly £35,000, incurred while sparring for position during the negotiations already referred to, and the balance is due to actual expenditure on the mines. Turning to the profit and loss account, you will see the London expenditure has been segregated under three headings instead of being lumped together as formerly. The total expenses have been reduced by £1,800, which I think you will regard as satisfactory if you consider the important negotiations which have been brought to a successful issue and the difficult conditions under which the business has been conducted. I am hopeful that in time it will be possible to reduce administration expenses still further, but our motto must be efficiency first, economy afterwards, and as business men you will understand that it is generally futile to attempt to reverse that order. Included in the item of China expenditure of £9,050 is £4,502 in respect of converting into sterling the value of floating assets and liabilities in China at June 30, the tael value having fallen from 2*s.* 7¾*d.* to 2*s.* 4§*d.* The balance of £4,548 consists of European and Chinese salaries, consulting engineers' fees, bank charges, the £351 loss on the steamer, rent, and general expenses.

Cut-throat Competition Abolished.

I must now revert to the Honan Concession item, which remains at £133,733. There is an addition to the description in the accounts, which reads as follows : "Part of the rights under this concession have been transferred to the Fu Chung Corporation, in which the Syndicate holds a half interest, the remainder being represented by the coalfields at Ja-Hei-Sen." The agreement with the Fu Chung Corporation was announced in the circular issued last June, and it is also dealt with in the report now submitted, but you may wonder why, as we have disposed of certain interests to this Corporation, the concession should still figure in the balance sheet at the same valuation. You must remember that in the past the amount represented a proposition that was to a large extent unworkable, whereas now we shall share the benefit of the natural wealth of the whole of the concession; therefore it is safe to consider the amount apportioned as being now more approximately its value than it was under the old conditions. Among the advantages of the new arrangement, arrived at with the support and sanction of both the Central and Provincial Governments and the British Minister at Pekin, we abolish at a stroke the cut-throat competition we have had to face for the past few years from the native producers. Certain railway rates are reduced to an extent that will allow us to considerably extend our marketable area—a most important factor—and a definite agreement that no permits to mine in the Province of Honan will be granted to any other person or corporation during the 60 years' term of this agreement. The Syndicate's concession is extended 10 years beyond the original date of expiration. We also have the right to select and work an extra five square miles of territory adjoining our red and yellow permits. These are substantial benefits to set off against the rights transferred. So far we have every reason to be satisfied with the arrangement. Everything is working smoothly, and although during the transition stage the results cannot be taken as a criterion of the future, you will be pleased to hear that Mr. Kenrick, our agent-general, writes in one of his last letters home, "The result of the first two months' working augurs well for the future, and I am perfectly satisfied."

More Favourable Results.

I may mention that the very last results to hand are even more favourable than those I have just referred to, but, as I said before, these early results cannot be taken as a basis. As you are aware, the negotiations which have resulted in the deal with the Fu Chung Corporation have been as delicate as they have been protracted. There are always difficulties in dealing with a country the size of China, where the Central Government cannot be in such close touch with the provincial authorities as, for instance, the British Government is with the London County Council, and misunderstandings have constantly occurred. To be perfectly frank with you, it is not easy, nor would it be discreet, to tell much of the story in open meeting. Occasions arise when there must be diplomatic reserve in business as well as in politics, especially when the interests of third parties are involved. The Syndicate in the past has had to face a great deal of friction and opposition, which has had the effect of seriously obstructing the development of its resources, the disposal of its output, and the extension of its energies. All this is now changed by the creation of the Fu Chung Corporation, analogous to the Kailan Administration of the Chinese Engineering and Mining Company, which has proved eminently successful, and we are now assured of the hearty co-operation of all the influential people who count in Chinese political and commercial affairs.

The Outlook.

As to the past, mistakes have been made, sometimes costly ones, and I am afraid that a proportion of the expenditure on exploitation, prospecting and development may ultimately have to be written off if the coal properties are to show an adequate profit on the capital involved. But the transition stage between the old policy and the new renders it impossible to make even an approximate valuation of present and future prospects. When the Fu Chung Corporation is in proper working order we shall be able to do so. Our standing with the Chinese authorities is excellent, and we are thankful for the support we are receiving from the British Minister at Pekin. The President of the Republic is proving himself a most able and just administrator. We are hopeful that he will solve the present political tangle, and that under his guidance the country will make rapid progress. Moreover, the close alliance between Britain and France smooths away the little jealousies which, with all due respect to my French colleagues, might possibly have interfered with the energetic prosecution of the Company's business. China is gradually waking up, and there should be magnificent opportunities for a Company like ours, with abundant cash resources, to obtain concessions for railways and other public utilities as soon as world conditions right themselves. I cannot attempt, for obvious reasons, while negotiations are still pending, to enlarge on the hint given in the report as to the fresh businesses we are studying, but I may say that if they materialise they should prove of a remunerative nature. In these projects we are favoured by the fact that not only has German competition received a severe check, but because of the excellent relations established with the Governments and also our late competitors. We have sufficient cash, or its equivalent, to finance any likely project until, in the future, conditions again become normal. For these and other reasons I think we may justifiably consider the Syndicate's prospects as most encouraging.

Mr. André Berthelot (Managing Director) seconded the resolution, which was carried, with four dissentients.

MANAOS HARBOUR, LIMITED.

THE thirteenth ordinary general meeting of this Company was held at 11 Adelphi Terrace, Strand, W.C., on December 9, the Rt. Hon. Charles Booth (Chairman of the Company) presiding.

The Acting Secretary (Mr. Percy W. Crisp) having read the notice convening the meeting,

The Chairman said: The report of the year's work to June 30, 1915, and the accounts have been in your hands for some days, and with your permission I will take them as read. Before moving their adoption I have a few remarks to make, and shall heartily welcome any questions which may help to elucidate the position, unfavourable as it is.

Depression in Brazil.

Apart from contracted trade in the Amazon itself, we suffer from a general depression in Brazil, resulting in a fall in the value of the milreis, upon which a large proportion of our revenue depends. The fall was persistent up to the end of the financial year (June 30 last). The rate is now fairly steady at about the level then reached; no immediate improvement can be expected. The War is largely responsible for the fall in exchange, but as regards the trade of the Amazon the War has had little, if any, effect. Rubber fell during the first six months of the War, but has since recovered considerably; and it may be doubted whether the value would have been as great as it is now if there had been no war.

Working Expenses Heavily Reduced.

Such are the difficulties with which we have had to contend. We have met them as far as we could. Working expenses have been reduced from £92,000 to £65,000, and no capital expenditure has been incurred that could be avoided. The final result, however, is that the net earnings fall short by £6,000 of providing the Debenture interest, and consequently the dividend due on the Preference shares stands over and accumulates.

Distinct Trade Improvement.

With regard to the future, we find comfort in a distinct trade improvement since June 30, and we may hope that the end of the year, the results of which we are considering to-day, may prove the turning point. I think it will. Our relations with the Federal State and Municipal Authorities continue excellent, and we are most efficiently served at Rio by our representatives, Drs. Alvaro de Carvalho and Noemio da Silveira. I would also recognise gratefully the faithful work of our Manáos and London staffs.

Directors Forgo Remuneration.

I have one word to add, and that is that the directors do not like to receive any remuneration in this concern so long as the dividend on the Preference shares is not paid. Last year, when we hoped the non-payment of the dividend would be temporary, and that this year we should be able to pay it, we reduced our remuneration by one-half, and we now propose not to draw anything so long as the dividend on the Preference shares is not paid. I will now move: "That the directors' report and statement of accounts for the financial year ended June 30, 1915, now presented, be and they are hereby approved and adopted."

Mr. Bernard Byrne: I beg to second that.

The resolution was then put to the meeting and carried unanimously.

Mr. Byrne: I beg to move: "That the Rt. Hon. Charles Booth and Mr. George M. Booth be and they are hereby re-appointed members of the board of directors."

Mr. E. H. Tootal seconded the motion, which was unanimously agreed to.

Messrs. Deloitte, Plender, Griffiths and Company were re-appointed auditors for the ensuing year, on the motion of Mr. A. L. Baxter, seconded by Mr. R. G. Sanceau.

The proceedings then terminated.

Help the Homeless People of Poland

by contributing to the

GREAT BRITAIN TO POLAND FUND

(with which is affiliated the British Moscow Relief Committee).

THE devastation of Poland is one of the greatest tragedies of the war. People who once were well-to-do stand in silent, anxious crowds waiting their turn while the soup kitchens pass along. Thousands are living in trucks and sleeping on the stone floors of railway stations Women, with children in their arms, have walked hundreds of miles to escape the horrors of German invasion, and have arrived at their destination so dazed and tired that the joy of seeing a friendly face, or hearing a friendly voice, has been denied them. "It is the saddest sight I have ever seen," states a writer, in a letter from Moscow, and to all who feel compassion for the victims of the war—broken men and women, and starving children—an earnest appeal is made to send what help they can to—

EVELEIGH NASH, Esq., Hon. Treasurer,
Great Britain to Poland Fund,
Berkeley Hotel, Piccadilly, London.

Twenty Shillings will keep 20 people from starvation for a week.

Committees have been established in all the principal cities of the U.K.

Patrons:
THE ARCHBISHOP OF CANTERBURY.
THE EARL OF ROSEBERY.
HIS EXCELLENCY SIR G. W. BUCHANAN
(British Ambassador Extraordinary and Plenipotentiary at Petrograd).

Chairman of the London Committee:
PRINCESS BARIATINSKY.

Acting Chairman:
THE LADY BYRON.

Hon. Secretary:
C. W. NICHOLSON, Esq.

Hon. President:
THE LORD MAYOR OF LONDON.

Hon. Vice-Presidents:
THE DUKE OF NEWCASTLE.

Hon. Treasurer:
EVELEIGH NASH, Esq.,
Berkeley Hotel, Piccadilly, London.

Bankers: THE RUSSO-ASIATIC BANK, 64 Old Broad Street, E.C.
Cheques should be made payable to "Great Britain to Poland Fund.

WHITE PASS AND YUKON RAILWAY COMPANY, LTD

THE eighteenth ordinary general meeting was held on December 6, at Winchester House, Old Broad Street, E.C., Mr. C. C. Macrae (the Chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: As you will recollect, all our anticipations of the beneficial results that we had been led to believe would follow on the purchase of the undertaking of the Northern Navigation Company, and through that purchase the carriage of the goods of the Northern Commercial Company, were entirely upset by the outbreak of the War, which caught us just at the commencement of August, August and September being the two heaviest and busiest months of the four working months of this Company's operations on the Yukon, and all the estimates were completely upset, depriving us of the greater part of the tonnage which we should undoubtedly have received had it not been for the outbreak of war, the stoppage of credit on the Pacific Coast, and so on. The result, as you know, was that we were compelled to go to the Debenture-holders and ask their forbearance to our funding their coupons for the following year, that is, the year to June 30, 1915. I regret, more than I can express, to tell you that it would have been wise if, instead of asking merely that the interest on the Debentures should be dealt with for one year, we had then asked and endeavoured to obtain from the Debenture-holders forbearance for a longer period. The reason we did not do so was that which has so often proved a broken reed to me—the estimates and anticipations of the experts and of our advisers in the Yukon as to what would be the probable result of the trading in 1915. There is only one thing in the report and accounts to which I wish to draw your particular attention. If you look at the first item on the credit side of the profit and loss account for the year, you will see a credit given for £52,944, stated to be "By interest on securities of the local companies accrued to date." Now, I do not know whether it has occurred to any of you that there is something wanting in that statement. There is indeed, gentlemen. What we have happily been able to set against the corresponding item in every previous account presented to you has been "By interest on securities of the local companies paid and accrued to date." This year we are not able to insert the words "paid and," because it has not been paid; not one farthing of that £52,944 credited there has been received on this side.

Negotiations with Debenture holders.

Well, gentlemen, that state of things brings you face to face with disaster, and there is nothing for us but again to go to the Debenture-holders. I had hoped that I might have been able to-day to outline to you the proposal that we intend to make to the Debenture-holders, but unfortunately I am not able to do so, because although we have been in constant negotiation with representatives of the Debenture-holders during the last three weeks, we have not yet been able to arrive at what I may call a formulated proposal. I trust I am not over-sanguine in my belief that in principle we are agreed, but the proposal has not yet passed the formal stage which would justify me in making any statement to you at this meeting; I should only do harm instead of good. Therefore, all I can tell you is that it is absolutely necessaray to go to the Debenture-holders and ask their forbearance, and in doing so, as obviously occurs to you, it is necessary to ask for sacrifices from the shareholders, because they can hope for nothing from the Debenture-holders without at least something being done in that direction. Gentlemen, I do not dare to say more on that than that in the exceedingly difficult position in which my colleagues and I find ourselves we must ask you to trust us to do our best.

Effect of the War.

In view of the very disappointing results following the purchase of the undertaking and the fleet of the Northern Navigation Company by the American Yukon Navigation Company, as compared with everything we were led to believe would have followed from it, I confess that my mind has been sorely exercised as to whether that purchase was a wise one. Gentlemen, the answer is, as I told you at the time, that some such arrangement was absolutely necessary, because our business was being cut into so severely by the competition of that undertaking that unless we could come to terms with them it was certain we should have gone on the rocks. Now that has been avoided, and that is really the justification, and the amplest justification, for what was done. But now mark, that purchase was effected on a basis of what was ascertained to be the average of five years' operating of the Company whose business was taken over, and that average of five years showed that they ought to be able to give us 25,000 tons a year of freight traffic. As all our experts have told us, there was every reason to believe that that estimate would have been fully justified and obtained from the first, and so far facts justified that opinion, because in the early part of the season of 1914—June and July—the tonnage of the previous year was nearly doubled. Then suddenly came as a thunderbolt out of the blue the War, and in a moment all was shut down, and instead of getting 25,000 tons we got little more than 15,000 tons. The same has occurred this year, with the same result, and the consequence is that it has made all the difference between prosperity and disaster. If we had obtained the additional 10,000 tons there would have been no need to go to the Debenture-holders; you would have earned enough to pay that interest and provide for the sinking fund.

The Actual Position.

And now, gentlemen, to conclude, the position is this: We stand face to face with financial trouble of a most acute kind. On the other side, we have an undertaking which all whose advice we must take and rely on in these matters believe to be one that should be prosperous in normal times, and if we can come to a satisfactory arrangement with the Debenture-holders no trouble will arise from those who were formerly our competitors in the Yukon, for their interests are, to a large extent, ours. It is as much to their interest that the traffic should be of the largest possible proportions as to ours, and that they should put every ton that they can into the Northern Commercial Company's stores, and I have no doubt whatever that no effort on their part will be wanting to do it. You cannot reasonably expect a change for the better while the War goes on, and during that time we may not be in a position to obtain the wherewithal to meet our Debenture interest. I shall conclude by formally moving the adoption of the report and accounts, but I trust that I have not been over-doleful or, on the other hand, over-hopeful. I have endeavoured to state to you, as I said at the commencement, frankly what I know of the actual position, and I have given it to you in the general observations which I have made. I have now before me the most unpleasant and most difficult task of trying to persuade and get the Debenture-holders to agree to such terms as may leave, at any rate, some possible reversion of hope for the much-tried shareholders in this Company, for whom we have worked to the best of our ability for a good many years. It is one of the most disappointing things that has occurred to me in my business experience that I should have been compelled for two years running to present so unhappy a state of affairs to the shareholders.

Mr. Edward F. North: I beg to second the resolution, and in doing so I support every word that our Chairman has said. I think he has put the case most fairly before you all, and I regret as much as he does, and as much as everybody else on this side of the table does, that circumstances should have led us into this very unexpected and unhappy position for the time being.

The resolution was carried without comment.

SHEBA GOLD MINING COMPANY, LIMITED.

THE eleventh ordinary general meeting was held on December 8 at Winchester House, Old Broad Street, E.C., Mr. C. F. Rowsell (the Chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the net result of the year's operations, after deducting all charges at the mine, &c., was a profit of £38,160, as compared with £49,549 last year. Two dividends had been paid on account of the year 1914-15, each of 5%. Mine development now stood at the figure of £3,000, and as this was represented by ore reserves amounting to over 100,000 tons he did not think it was at all satisfactory. The financial position of the Company, he thought, might be considered a satisfactory one. Dealing with the position at the mine, he regretted that it had not improved since last year. It was due to the serious decrease in the value of the ore from the Zwartzkopje mine (now about 2.35 dwt. per ton) that the profits of the Company had been so greatly affected. Coming to the Intombi mine, work on that property had increased the ore reserves by 3,400 tons, 28,138 tons having been developed during the year. The ore reserves in this mine were placed at a value of 9 dwt. per ton. Acting on the recommendation of the Consulting Engineer, they had secured a block of claims adjoining their own property into which the Intombi reef dipped, and, as before long their workings would reach the level where they would enter these claims, he thought they were to be congratulated upon having secured them on what, according to the Consulting Engineer's advices, were satisfactory terms. Every possible care was being given to the question of the development of the Intombi mine, and he was satisfied that no step was being left untaken to follow all favourable indications. With regard to the Southern Cross, Mr. Milligan estimated, on the basis of an average stoping width of 48 in., the tonnage to be 20,000, of an estimated value of 9 dwt. per ton. The summary of ore reserves given in that report was interesting—namely, 10,700 tons in the Zwartzkopje mine, 53,400 tons in the Intombi mine, 20,000 tons in the Southern Cross mine, 14,500 tons in the Insimbi mine and 1,500 tons in the Margaret mine, making a total of 100,100 tons. Of course, the average value of the ore had been reduced. The

Sheba ore had always been a refractory one, and the ore in the Intombi mine was extremely refractory. It was therefore necessary to alter their reduction plant in order to obtain a fair recovery. This question had been before the directors for a considerable time, and many experiments had been conducted with a view to improving the result. He hoped that before meeting the shareholders again next year they would be able to report that they had succeeded in solving this somewhat difficult problem and that their profits, as a result, were again on an increasing scale.

Mr. H. D. Lewis seconded the motion, which was carried unanimously.

UNITED RHODESIA GOLD FIELDS, LIMITED.

The ordinary general meeting of this Company was held on December 6 at Winchester House, Old Broad Street, E.C., Mr. C. F. Rowsell, Chairman of the Company, presiding.

The Chairman, in moving the adoption of the report, said that the board had very carefully studied the question of expense, and felt that it was impossible to reduce it much lower without interfering with the efficiency of the management, both in London and in Rhodesia. The result of the year's working was a loss of £17,714. They had a balance to the credit of profit and loss account last year of £2,503, so that the result was that at the present time their profit and loss account stood in debit to the amount of £15,211. Dealing with "Shares and Debentures in other companies," he said that the Cam and Motor Gold Mining Company, Limited, in which their Company held 11,750 shares, had now successfully overcome the difficulty as to extraction which they had when first operating their plant. That Company was making substantial profits, and he had every hope that it would be able to enter the dividend-paying stage within a year. The Golden Kopje Proprietary Mines, Limited, in which they held 37,934 shares, was now producing. The latest information pointed to its being able to earn satisfactory profits. The Jumbo Gold Mining Company, Limited, continued crushing, and it had still ore ahead of the mill. The Lonely Reef Gold Mining Company, in which they held a small interest, paid 20% last year. The Mayo (Rhodesia) Development Company (1908), Limited, was the largest interest which they held. It was entirely managed by the United Rhodesia staff in London and Rhodesia, and had paid away to its shareholders during the past few years dividends amounting in all to 70%. In common, however, with many other companies of a similar character, the very depressed times which preceded and had continued throughout the War had greatly affected the market value of its interests, but he did not think that the intrinsic values had been diminished to anything like the extent which the market valuation would suggest. He had a very high opinion of Rhodesia Lands, Limited, which had a nominal capital of 68,757 shares of £1 each, of which their Company held 55,007 shares. So far that Company's sales had been at an average of 16*s.* 4*d.* per acre, and for the year 1914 at 19*s.* 2*d.* per acre; but, taking the land at 10*s.* per acre, they had a total value for the assets of the Company of £161,253. Deducting Debentures and creditors to the value of £35,421, they got a total of £125,833, which represented nearly £2 per share. From time to time the United Rhodesia's holdings of claims were capable of being realised, but at the same time it was very difficult to place any definite value upon the properties they held.

Mr. G. Seymour Fort seconded the resolution, which was adopted.

SLATERS, LIMITED.

The twenty-first ordinary general meeting was held on December 10 at the Hotel Cecil, Strand, W.C., Sir David Burnett, Bart. (Chairman of the Company), presiding.

The Chairman said that the past year had been one of great anxiety to the Board, and had entailed considerably increased labour, and that labour had been increased by the death of their late colleague, Mr. Alfred Slater, and the difficulty of finding a suitable director to take his place. Further, Colonel L. T. Burnett had volunteered for foreign service on the outbreak of War, and left England within two or three weeks of that event. It should be remembered that they paid their accounts weekly, and consequently every week during the past year he (the speaker) had had to sign some 400 to 500 cheques. On several occasions, also, he had visited every one of their branch establishments, and that work had been entirely without remuneration. He was content and willing to serve the Company as long as he had the confidence of the shareholders and until the Company resumed its prosperity, when he would take a rest. He believed that the present position was caused entirely by the War. He gave that as his opinion, and he thought it would be agreed that it was a sincere opinion, because he had never parted with a share, but had actually increased his holding, until, he believed, he was the second largest shareholder in the Company. Most of his shares had been acquired at a premium. He moved the adoption of the report and accounts.

Mr. J. G. Bean (managing director) seconded the motion.

Mr. W. E. Catesby, J.P., moved as an amendment that the directors' report and accounts be received, but not adopted.

Mrs. L. Samson seconded the amendment, which was carried by a large majority.

The original resolution, as amended, was then put as a substantive resolution and carried.

Mr. Catesby moved, "That a committee of five shareholders be appointed to investigate the affairs of the Company, with authority to engage professional assistance and to report to an adjourned meeting of shareholders, and that this meeting stands adjourned to receive the committee's report, a copy of which report, together with notice calling such general meeting, shall in due course be issued by the Company to the shareholders."

The motion was seconded by Mrs. Samson and carried.

A committee consisting of Mr. W. E. Catesby, Mr. Thomas Bickerton, Mrs. Louisa Samson, Mr. John McLaren, and Mr. John Salter Cox was then appointed.

Mr. J. G. Bean said he welcomed the appointment of the committee, and thought that when that committee reported to the shareholders they would not have anything very serious to say against the directors of the Company.

MASHONALAND AGENCY, LIMITED.

An extraordinary general meeting was held at Salisbury House, London Wall, on December 3 to consider a proposal to reduce the capital of the Company. Mr. H. L. Stokes (Chairman and Managing Director) presided.

The Chairman referred to the reconstruction proposals brought forward by the directors last August, and stated that they thought that the proposition would have placed the Company in an excellent and strong position, and with a fair amount of working capital available for the further development of the Company's assets. However, the conditions in the depressed markets prevailing were peculiar, and a small section of shareholders dissented from the proposals. In the opinion of the board the cost to the Company to settle with those dissentients would have been too great a drain upon the Company's cash resources, and detrimental to the interest of the general body of shareholders. Further, it would have restricted the development of the Company's important land assets, for which a large amount of capital would be required. In these circumstances the board had no option but to abandon their proposals, which was done with great regret.

The Proposal for Reduction of Capital

The board, however, appreciating the position, had realised that the capital of the Company could not remain at its present amount in the permanently altered circumstances, and appreciated that the only way to meet the situation was to reduce the capital in the manner now proposed—namely, by a distribution of a proportion of the Company's shareholding in the Wankie Colliery Company, Limited, and by cancelling lost capital. Such a proposal was considered by the board before the reconstruction proposition was arrived at, and had, indeed, been advocated by Mr. Oakley before the last extraordinary meeting, but for reasons of which the shareholders were familiar the board could not see its way to parting with this asset. The so-called lost capital, amounting to £126,342, was made up partly by the amount written off certain gold-mining claims and partly by the difference between the cost standing in their books of certain blocks of shares as compared with present-day values. The large bulk of the shareholdings represented properties acquired in the ordinary way and turned over to subsidiary concerns after a certain amount of expenditure on their development, the shares being the consideration for sale and the cost thereof representing expenditure borne by the Company in the original acquisition of the properties and in the exploiting work carried out before flotation. The Mashonaland Agency was, he believed, the only Rhodesian Company that had never been obliged to ask for more money or to reconstruct; further, they had never issued debentures, and the present proposal for reduction of capital was only a convenience and not a necessity, the financial position being absolutely sound.

Distribution of Wankie Coal.

Coming to the distribution of one 10*s.* Wankie Colliery share, now quoted at 17*s.* each for every three Mashonaland Agency £1 shares, the Chairman stated that the Wankie share at 17*s.* divided amongst three Mashonaland Agency shares meant 5*s.* 8*d.* a share, to which was to be added the 6*d.* cash distribution per share which was proposed, making 6*s.* 2*d.* distributed in respect of each Mashonaland Agency share now held. The Wankie Company paid last year 25% dividend on its old capital, or equal to 12½% on its present increased capital. If that Company continued to make similar distribution by way of dividends (and it had already paid two 5% interim dividends this year), it would mean that the shareholders would receive regular dividends of 5*d.* for every one Mashonaland Agency share now held, and the dividends accruing should be looked upon as coming from their investment in the Mashonaland Agency. With regard to the distribution of 6*d.* per share in cash, equal to the sum, roundly, of £10,000, as their available cash was, roundly,

some £50,000, they would have left a balance of, say, £40,000, to carry on the business of the Company, and for this amount of working capital they had ample necessity for developing their many valuable assets. They were not a mere rent and revenue collecting concern, but a Company with an active forward policy of development of assets until maturity was reached—a policy calling for expert knowledge and experience, and which could not be expected to be successful if cheapness were considered of more importance than efficiency.

The Remaining Assets.

The development of the remaining assets called for as much work and control of expenditure as ever—the distribution of Wankie shares obviously making no difference in this respect—the partly developed condition of the remaining assets being as important as before. Further, there were companies in which they were already interested that might be requiring financial assistance, and prepared to give good terms in return. Until the able direction of Mr. Steuart Richardson they had now completed the development of the Lochard Estate of 30,000 acres. Having carried out this work they had now turned their attention to the next conveniently situated block of land known as Blackwaters (14,600 acres); and having assured themselves by sinking wells of an ample water supply, they were also fencing and developing that estate to serve as an overflow from Lochard. They also proposed adding to the herds by purchases of further cattle. Mr. Wrey, the General Manager, had given especial attention to the policy of their land development and ranching. The success of their ranching, so far as it had gone, had been most encouraging. The question of further markets for cattle as the herds increased in Rhodesia had been receiving careful study and attention. He had merely touched on these matters as indicating the necessity for financing their business with adequate capital, and not distributing what the directors considered to be an excessive amount. He concluded by proposing the resolution.

Sir Leigh Hoskyns, Bart., seconded the motion.

Shareholders' Views.

Mr. Cross submitted that the directors' scheme as now proposed was the result of correspondence which had passed between his Company and the board. The latter had now agreed to a distribution of shares in the Wankie Colliery Company, Limited, whch they formerly opposed. He afterwards contended that the proposed cash distribution should be increased from 6*d.* to 1*s.* per share, which would leave the directors with £30,000 of available cash to carry on the business of the Company, and he maintained that that sum would be quite sufficient to proceed with any reasonable developments. The only thing he could legally do in proposing his amendment was to ask the directors to pay the shareholders 1*s.* per share cash instead of 6*d.* out of the £50,000 in hand, but he desired to have an assurance from them that the management expenses should be reduced.

Mr. Oakley seconded the amendment, and congratulated the board on the decision at which they had arrived as regarded the distribution of shares in the Wankie Company.

Mr. Brailsford and other shareholders having spoken in support of the views expressed by Mr. Cross,

Mr Edmund Davis's Suggestion.

Mr. Edmund Davis (the Chairman of the Wankie Colliery Company) stated that he had for a long time advocated the distribution of the Wankie shares held by the Mashonaland Agency. He spoke in sanguine terms of the position and prospects of the colliery, and afterwards remarked that he valued the assets of the Agency at a much higher figure than the directors had set before the meeting that day. After giving particulars of certain items representing, according to his valuation, a total of £300,000, he suggested the appointment of five shareholders to confer with the directors, to adjourn the meeting for a week, and in the interval to endeavour to come to some arrangement which would meet with the approval of all of them.

Mr. H. Wilson Fox stated that the directors had a full reply to all the points which had been raised in the discussion, but he was unwilling in a time of war to say all that he would have to say in their defence. If an adjustment of the various points at issue could be effected in any other way, he and his colleagues on the board were ready to assent to the suggestion made by Mr. Edmund Davis. He desired, however, to state emphatically that the directors had a complete answer to the points raised by Mr. Cross, and if the proposed negotiations with the directors did not succeed, he should consider it his duty to give a very full explanation. They had nothing to conceal or to fear.

After some further discussion, the suggestion of Mr. Davis was agreed to in the form of an amendment, Mr. Austen, Mr. Snell, Mr. Oakley, Mr. Foster-Melliar, and Mr. Edmund Davis being appointed to confer with the directors and to report to the adjourned meeting on the 10th inst.

The meeting then stood adjourned.

THE ADJOURNED MEETING.

The adjourned meeting was held on December 10, Mr. Stokes again presiding.

The Chairman stated that in the best interests of the shareholders the directors had kept in view the importance of unanimity, and this policy had directed them throughout. Mr. Davis would read a statement setting forth the whole position and the conclusions arrived at.

Mr. Edmund Davis stated that the committee were satisfied, now that they had looked into the position of the Company and had had an opportunity of discussing it with the board, that the past operations had been carried on in accordance with the general run of similar development undertakings, and the expenditure under the circumstances which had prevailed had not been and was not exorbitant. The London and South African expenses had shown a steady decrease since 1911, and the committee thought that the shareholders might rest assured that the directors would continue to devote their attention to cutting down expenditure wherever possible, provided such action did not tend to injure the business of the Company. The reconstruction scheme now proposed in agreement with the board would mean, if carried out, a distribution in cash and a holding in the Wankie shares which should bring in a steady income in the future to those who retained them.

Amended Proposals Agreed to.

The arrangement come to in agreement with the board was as follows: (1) The distribution in cash of 1*s.* per share; (2) the distribution of 132,992 fully-paid Wankie shares—that was, at the rate of one Wankie Colliery Company share for every three Mashonaland Agency shares (3) the reduction of each member of the board's fees from £200 to £150 per annum; (4) the reduction of managing director's remuneration from £500 to £350 per annum; (5) the reduction of secretarial and office charges to £750, inclusive, instead of £1,500 per annum, subject to varying deductions for work done for other companies; (6) the reduction of £250 per annum in African expenditure so soon as feasible, bearing in mind existing arrangements; (7) the formation of a new Company with a capital of £150,000, divided into 400,000 shares of 7*s.* 6*d.* each, one such share fully paid to be allotted in exchange for each fully-paid share now issued in the Mashonaland Agency. The distribution of Wankie shares was to be subject to those receiving the same paying stamp and transfer fees, which would mean a saving to the Company of about £1,200, though, on the other hand, the shareholders would receive an additional £10,000 by way of distribution, making a net increase to them of £8,800.

A long discussion followed, generally in favour of the scheme outlined by Mr. Davis, but some shareholders thought that it would be more advisable if the cash distribution originally proposed by the directors had not been increased, as more money would have remained in the hands of the Company.

Eventually the amendment proposed at the last meeting was withdrawn with the consent of the meeting, as was also the original resolution proposed on that occasion by the Chairman.

The Chairman afterwards took the sense of the meeting by a show of hands as to carrying out the committee's proposal, which he declared to be carried "by a very large majority." He added that due notice would be given of the further extraordinary meetings, which would be convened within a reasonable time.

On the motion of Mr. Vere H. Smith, a vote of thanks was passed to the committee and the board.

RAND GOLD OUTPUT.

WARWICKS AND RICHARDSONS.—Dividend of 8 per cent.

WESTERN TELEGRAPH COMPANY.—First quarterly interim dividend of 3*s.* per share, tax free.

NEW ZEALAND.

A Wealthy Country, Splendid Climate, Fertile Soil, Plenty of Water.

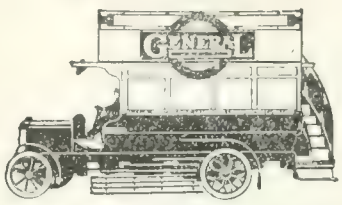
An Ideal country for the farmer, the percentage of grain and lambs being phenomenally high.

New Zealand, a country as large as the United Kingdom, with but a million population, has an annual export of raw products exceeding Twenty Million Pounds sterling.

NEW ZEALAND is rich in COAL, IRON, TIMBER, GUM, GOLD and SILVER.

Total yield of Minerals, over One Hundred and Twenty Million Pounds.

Over Eighteen Million Pounds have been advanced by Government to Farmers and Workers for Improvements and Buildings at a low rate of Interest.



The Railways, 3,000 miles, Telegraphs and Telephones, 124,000 miles, are owned and operated by the State.

WITH SPECIAL INSURANCE SECTION.

THE TANALYK CORPORATION, LIMITED.

REPORT OF THE DIRECTORS

To be presented to the Shareholders at the Third Annual General Meeting of the Corporation, to be held at Winchester House, Old Broad Street, London, E.C., on Tuesday, the 21st December, 1915.

The Directors present herewith the Third Annual Report of the Corporation, together with the Statement of Accounts for the year ending 13th January, 1915.

The Interest and Commission Receipts, &c., for the period amounted to £16,650 6*s.* 11*d.* The Directors' Fees and Office Expenses amounted to £3,677 3*s.* 11*d.* and Debenture Interest to 11,965 15*s.* 3*d.*; there is therefore a Credit Balance of £391 0*s.* 7*d.* carried forward.

Since the last meeting 9,451 shares have been issued for £23,421 4*s.* 2*d.*

The capital of the Corporation at the present date is as follows:—

SHARE CAPITAL—		
Original Issue	300,000	Shares.
Since issued for Cash	43,451	,,
,, in exchange for Debenture Stock	540	,,
Reserved for exchange of balance of Debenture Stock	65,460	,,
Under option to 1st November, 1916, at £3 per share	40,549	,,
Total	450,000	,,
DEBENTURE STOCK—		
Authorised and Issued	£200,000	
Since redeemed by exchange for Shares	£1,643	
Outstanding	£198,357	

As Shareholders are aware, this Corporation holds the share capital of The South Urals Mining and Smelting Co. Reports of the progress of that Company's operations have been sent to Shareholders monthly and a general report from Mr. R. Gilman Brown dealing with the work at Tanalyk is attached hereto, to which particular attention is drawn.

The Directors retiring by rotation, Mr. V. V. Romanoff and Captain C. A. Reid Scott, are eligible and offer themselves for re-election.

The retiring Auditors, Messrs. Deloitte, Plender, Griffiths & Co., offer themselves for re-election.

By Order of the Board,
J. P. B. WEBSTER,
London Manager and Secretary.

7 Gracechurch Street, London, E.C.,
10th December, 1915.

From the CONSULTING ENGINEER'S REPORT on operations to October, 1915, based on data received.

SUMMARY.—Ore Reserves amount to from 98,000 to 108,000 tons of solid sulphide, and 140,000 tons of Semeonovsky gossan (gold ore). This is sufficient to supply the Smelter and Cyanide Plant at their full present capacity for about three years, or at the rate of 600 tons annual output of copper for five years.

Ulali has become a valuable mine, with higher copper contents than any of the other mines.

The Tuba Prospect, discovered by the Geological Department, is showing phenomenal values in the shallow workings, and presents several features that justify the hope of having discovered here the outcrop of a valuable copper ore body.

Shortage of labour is serious, and continually hampers our work.

The Tuba is situate some 25 miles North of Tanalyk. The outcrop is over 1,000 feet long, and we have now proved some 270 feet in length of this, 60 feet below the surface. The vein is here oxidised, and consists of baritic sands and gossan, the evidence, so far collected, pointing to its being the oxidised form of a pyritic vein. Samples for 160 feet of this drive have been received, showing an average assay of 1.1% Copper, 76 dwt. Gold and 23 oz. Silver, over a 6-foot width. This is highly characteristic of a pyrite body, and gives ground for encouragement. It is recognised that the greater part of the copper has been leached out, and that the gold and silver values have been relatively enriched. The average width given above represents the width of the drive, but opposite one of the shafts a 40 feet width of material has been proved, similar in character and value, and at another point a cross-cut has proved 12 feet.

ORE RESERVES.—On April 1st, 1915, they were calculated as follows:—

Mambet	65,800 T.	averaging 2.3% Copper, 7.1 dwt. Gold, and 7.4 oz. Silver.
Tanalyk	10,000 T.	averaging 3.5% Copper, 3.4 dwt. Gold, and 2.0 oz. Silver.
Graffsky	5,500 T.	averaging 2.1% Copper, 6.6 dwt. Gold, and 3.9 oz. Silver.
Ulali	10,000 T.	averaging 7.9% Copper, 3.4 dwt. Gold, and 1.2 oz. Silver.
Total, Sulphide	91,300 T.	averaging 3.0% Copper, 6.2 dwt. Gold, and 5.9 oz. Silver.
Semeonovsky, Gossan	140,000 T.	averaging — Copper, 12.0 dwt. Gold, and 0.7 oz. Silver.

In addition to the foregoing we have recently received a fresh estimate of the Sulphide ore reserves prepared at the mine in August. This is given below:—

	Tons.
Mambet	71,000
Tanalyk	6,000
Graffsky	3,000
Ulali	28,000
Total Sulphide	108,000

SMELTER.—The Smelter has produced in twelve months from 32,000 tons of Sulphide and Gold Ore, 573 tons of Blister Copper, assaying 98% Copper, 21 oz. Gold and 186 oz. Silver. Two small Blast Furnaces have been added to the Plant for treatment of the pyrite ore from Ulali, but shortage of coke has prevented continuous operation, and to the end of September but 600 tons had been put through this part of the plant.

CYANIDE PLANT.—The Cyanide Plant was started in August. Detailed reports on its operation have not been received, but it has been satisfactory, and from the first 30 days' run 383 oz. of gold were recovered. Difficulty in obtaining zinc for precipitation has been great, and one stoppage of two weeks for this reason has already been notified.

The 1916 estimates from the mine provide for an output of copper at the rate of 1,000 tons per annum, but in view of present conditions I should consider it a safer assumption to say that we shall produce at the rate of about 600 tons of blister during next year, which represents, in conjunction with the curtailed operations of the cyanide plant, a profit at present prices in the neighbourhood of Rs. 10,00,000.

IMPORTANT ANNOUNCEMENT.

EXCHEQUER BONDS.

Per Acts 29 Vict. c. 25; 52 Vict. c. 6; and 5 & 6 Geo. V. c. 55.

Bearing Interest from the date of purchase at £5 per cent. per annum, payable Half-yearly on the 1st June and the 1st December.

REPAYABLE AT PAR ON THE 1st DECEMBER, 1920.

Price of Issue fixed by H.M. Treasury at £100 per cent.

THE GOVERNOR and COMPANY of the BANK OF ENGLAND are authorised by the Lords Commissioners of His Majesty's Treasury to receive until further notice applications for Exchequer Bonds as above.

The Principal and Interest of the Bonds are chargeable on the Consolidated Fund of the United Kingdom.

The Bonds will be issued in denominations of £100, £200, £500, £1,000, and £5,000, and will bear interest at £5 per cent. per annum, payable half-yearly by Coupon, the first Coupon on each Bond representing interest to the 1st June, 1916, from the date upon which payment for the Bond is made.

In the event of future loans (other than issues made abroad or issues of Exchequer Bonds, Treasury Bills, or similar short-dated securities) being raised by His Majesty's Government for the purpose of carrying on the War Bonds of this issue will be accepted, together with all undue Coupons, as the equivalent of cash to the amount of their face value for the purpose of subscription to any such loan. Interest accrued to the date of the surrender of a Bond will be paid in cash.

Bonds of this issue, and the Interest payable from time to time in respect thereof, will be exempt from all British taxation, present or future, if it is shown in the manner directed by the Treasury that they are in the beneficial ownership of a person who is neither domiciled, nor ordinarily resident, in the United Kingdom of Great Britain and Ireland. Where a Bond belongs to such a holder, the relative Coupons will be paid without deduction for Income Tax, or other taxes, if accompanied by a declaration of ownership in such form as may be required by the Treasury.

Applications for Bonds, which must in every case be accompanied by payment of the full amount payable in respect of the Bonds applied for, may be lodged by hand at the Bank of England, Threadneedle Street, E.C., on any business day between the hours of 10 A.M. and 2 P.M. (Saturdays between 10 A.M. and 12 noon); or they may be forwarded to the Bank through the post. Where payment is made otherwise than in cash or Banker's draft on the Bank of England, the amount of interest payable in respect of the relative Bonds on the 1st June, 1916, will be calculated as from the date on which the proceeds of the payment are actually received by the Bank.

In all cases in which the Bank are asked to forward Bonds by post, the Bonds will be dispatched by Registered Post at the risk of the Applicant, who must himself effect any insurance that may be desired.

A provisional receipt, exchangeable in due course for the Definitive Bonds, will be issued in respect of each application.

Bonds of this issue (ex the Coupon payable 1st June, 1916, for interest in respect of the broken period) may be lodged for registration in the books of the Bank of England, on payment of a fee of one shilling per Bond. Holdings of Registered Bonds, which will be transferable in any sums which are multiples of £100, in the same manner as Inscribed Stock, may be reconverted at any time into Bonds to Bearer without payment of any fee.

Dividends on registered holdings will be paid by warrants which will be trasmitted by post.

Applications must be made upon the printed forms which may be obtained, together with copies of this Prospectus, at the Bank of England, at the Bank of Ireland; of Messrs. Mullens, Marshall and Co., 13 George Street, Mansion House, E.C.; and at any Bank, Money Order Office, or Stock Exchange in the United Kingdom.

Bank of England, London,
16th December, 1915.

SIGN THIS FORM TO-DAY.

EXCHEQUER BONDS.

Bearing Interest at £5 per cent. per Annum, payable half-yearly, Repayable at Par on the 1st December, 1920.

PRICE OF ISSUE—£100 PER CENT.

To the Governor and Company of the Bank of England,

In terms of the Prospectus dated the 16th December, 1915, I/we hereby apply for (*a*) £ ..... say, ... pounds of the above-mentioned Bonds as detailed below, and I/we agree to accept that, or any less amount which you may allot to me/us.

The sum of (*b*) £ ....., being the amount of the required payment (namely £100 for every £100 of Bonds applied for), is enclosed herewith.

.....	Bonds of £100	£...
...	do. £200	£...
...	do. £500	£...
...	do. £1,000	£...
...	do. £5,000	£...
	TOTAL	£...

Name in full and Address (.....) (Signature of Applicant)

Date ....., 191

(*a*) Applications must be for not less than £100, and must be for multiples of £100.
(*b*) Cheques should be made payable to "bearer," *not* to "order," and should be *crossed* :—"Bank of England, a/c Exchequer Bonds."

VAN RYN GOLD MINES ESTATE, LIMITED.

DECLARATION OF DIVIDEND NO. 24.

NOTICE IS HEREBY GIVEN that the Board of Directors have this day declared an Interim Dividend for the current financial year of 17½ per cent. (3s. 6d. per Share), less Income Tax (at the rate of 3s. 5d. in the £), payable to Shareholders registered on the 31st December, 1915, and to the holders of Coupon No. 24 attached to Share Warrants to Bearer.

Dividend Warrants will be posted to Shareholders (other than those resident in enemy territory) on the European Register, from London, on the 17th January, 1916, and to Shareholders on the South African Register, from Johannesburg, at or about the beginning of February.

Holders of Share Warrants to Bearer will receive payment of this Dividend on or after **the 18th January, 1916, on presentation of Coupon No. 24 at either of the undermentioned** places, viz.:—

In London: At the Registered Office of the Company, 63-64 Winchester House, Old Broad Street, E.C.

In Paris: At the Crédit Lyonnais, 19 Boulevard des Italiens.

Coupons presented in London must be left four clear days and in Paris ten clear days for examination, and may be lodged any day (Saturdays excepted) between the hours of eleven and three o'clock. Listing forms may be obtained on application.

The Transfer Books of the Company will be closed from the 1st to 15th January, 1916, both days inclusive.

ISSUE OF NEW COUPONS.

Holders of Share Warrants to Bearer are invited, with the presentation for payment of Coupon No. 24, to surrender the Talon attached to their several Share Warrants for the purpose of obtaining a further supply of Coupons providing for the payment of future Dividends. The Talons must be accompanied by a signed form of application, copies of which can be obtained at either of the addresses mentioned above.

By Order,
T. FREDK. THORNE, Secretary.
63-64 Winchester House, Old Broad Street,
London, E.C., 15th December, 1915.

DURBAN ROODEPOORT DEEP LIMITED.

(Incorporated in the Transvaal.)

DECLARATION OF DIVIDEND NO. 12.

NOTICE IS HEREBY GIVEN THAT a Dividend of 3¾ per cent. (ninepence per share) has been declared by the Board for the period ending 31st of December, 1915, payable to shareholders registered in the books of the Company at the close of business on 31st of December, 1915, and to holders of Coupon No. 12 attached to Share Warrants.

The Transfer Books will be closed from the 1st to the 7th of January, 1916, both days inclusive.

It is intended to post the Warrants in payment of this dividend on or about 3rd of February, 1916, but irregularity in the mail service may render it necessary to defer the posting by one or even possibly two weeks. Those despatched from the London Office to persons resident in the United Kingdom will be subject to a deduction of English Income Tax.

Coupon No. 12 attached to Share Warrants will be payable on or after 4th of February, 1916, at the London Office of the Company. Coupons must be deposited four clear days before being paid, and, unless accompanied by Inland Revenue Declarations, they will be subject to a deduction of English Income Tax.

By Order of the Board,
A. MOIR,
London Secretary.

London Office:
No. 1 London Wall Buildings, E.C.,
15th December, 1915.

BRYANT AND MAY, LIMITED.

NOTICE IS HEREBY GIVEN that the Transfer Books of the Four per Cent. Debenture Stock will be Closed from the 18th to 31st instant, both days inclusive.

By Order,
JOSEPH H. G. REED,
Secretary.

THE ALEXANDRIA WATER COMPANY, LIMITED.

INTERIM DIVIDEND.

NOTICE IS HEREBY GIVEN that an Interim Dividend of Four Shillings per £5 Share on Coupon No. 54 is payable on and after the 15th December, 1915, at Messrs. Barclay & Company, Limited, 1 Pall Mall East, London, S.W., and 54 Lombard Street, London, E.C., or at the Anglo-Egyptian Bank, Limited, in Alexandria, upon the making of a declaration as to ownership in the form required by the above Banks, forms of which will be supplied upon application.

Dated, Alexandria, 22nd November, 1915.

By Order of the Board,
H. R. C. BLAGDEN
Manager.

CROWN MINES, LIMITED

(Incorporated in the Transvaal.)

DECLARATION OF DIVIDEND NO. 29.

NOTICE IS HEREBY GIVEN that a Dividend of 30 per cent. (3s. per 10s. share) has been declared by the Board for the period ending 31st of December, 1915, payable to shareholders registered in the books of the Company at the close of business on 31st of December, 1915, and to holders of Coupon No. 29 attached to Share Warrants.

The Transfer Books will be Closed from the 1st to the 7th of January, 1916, both days inclusive.

It is intended to post the Warrants in payment of this Dividend on or about 3rd of February, 1916, but irregularity in the mail service may render it necessary to defer the posting by one, or even possibly two, weeks. Those despatched from the London Office to persons resident in the United Kingdom will be subject to a deduction of English income tax, and those despatched to persons resident in France will be subject to a deduction on account of French transfer duty and income tax.

Coupon No. 29 attached to Share Warrants will be payable on or after 4th of February, 1916, at the London Office of the Company, and at the Crédit Mobilier Français, 30 and 32 Rue Taitbout, Paris. Coupons must be deposited four clear days before being paid.

Coupons paid by the London Office, unless accompanied by Inland Revenue declarations, will be subject to a deduction of English income tax. Coupons paid by the London Office to or on account of persons resident in France, and those paid by the Crédit Mobilier Français, will be subject to a deduction on account of French transfer duty and income tax.

By Order of the Board,
A. MOIR, London Secretary.

London, 15th December, 1915.

INTERNATIONAL MERCANTILE MARINE COMPANY.

TO HOLDERS OF PREFERRED STOCK.

The undersigned COMMITTEE was CONSTITUTED and is acting under a Deposit Agreement dated September 24, 1915. It calls for the DEPOSIT of PREFERRED STOCK in order that the interests of the Preferred Stockholders may be protected through concert of action. The Committee is firm in its opinion that the Preferred Stockholders are entitled to a reorganisation to a very much larger interest than the present plan accords. There has been deposited under said agreement in New York over 60 per cent. of the outstanding Preferred Stock.

GUARANTY TRUST COMPANY OF NEW YORK, No. 33 Lombard Street, London, E.C., has been appointed Sub-Depositary under the Deposit Agreement of September 24, 1915, and holders of Preferred Stock desiring to secure the benefits of said Deposit Agreement may deposit their stock certificates with same, said Depositary, at its said office in London, on or before the close of business on January 5, 1916. All stock certificates must be endorsed in blank for transfer or be accompanied by appropriate transfers in blank. At the time of deposit there must be paid to said Sub-Depositary, on account of American taxes for transfers of stock, the sum of four cents for each share deposited, and in addition depositors will at the same time be required to pay any English tax stamps upon such deposit and the issuance of certificates of deposit therefor.

Dated New York, 15th December, 1915.

DECLARATION OF DIVIDEND No. 15.

NOTICE IS HEREBY GIVEN that a Dividend of 11¼ per cent. (2s. 3d. per share) has been declared by the Board for the period ending 31st of this Dividend on or about 4th of February, 1916, but irregularity in the mail service may render it necessary to defer the posting by one or even possibly two weeks. Those despatched from the London Office to persons resident in the United Kingdom will be subject to a deduction of English income tax, and those despatched to persons resident in France will be subject to a deduction on account of French transfer duty and income tax.

Coupon No. 15 attached to Share Warrants will be payable on or after 4th of February, 1916, at the London Office of the Company, and at the Crédit Mobilier Français, 30 and 32 Rue Taitbout, Paris. Coupons must be deposited four clear days before being paid.

Coupons paid by the London Office, unless accompanied by Inland Revenue declarations, will be subject to a deduction of English income tax. Coupons paid by the London Office to or on account of persons resident in France, and those paid by the Crédit Mobilier Français, will be subject to a deduction on account of French transfer duty and income tax.

By Order of the Board,
A. MOIR, London Secretary.

ROSE DEEP, LIMITED.

(Incorporated in the Transvaal.)

DECLARATION OF DIVIDEND NO. 29.

NOTICE IS HEREBY GIVEN that a Dividend of 15 per cent. (3s. per share) has been declared by the Board for the period ending 31st of December, 1915, payable to shareholders registered in the books of the Company at the close of business on 31st of December, 1915, and to holders of Coupon No. 29 attached to Share Warrants.

The Transfer Books will be Closed from the 1st to the 7th of January, 1916, both days inclusive.

It is intended to post the Warrants in payment of this Dividend on or about 3rd of February, 1916, but irregularity in the mail service may render it necessary to defer the posting by one or even possibly two weeks. Those despatched from the London Office to persons resident in the United Kingdom will be subject to a deduction of English income tax, and those despatched to persons resident in France will be subject to a deduction on account of French transfer duty and income tax.

Coupon No. 29 attached to Share Warrants will be payable on or after 4th of February, 1916, at the London Office of the Company, and at the Crédit Mobilier Français, 30 and 32 Rue Taitbout, Paris. Coupons must be deposited four clear days before being paid.

Coupons paid by the London Office, unless accompanied by Inland Revenue declarations, will be subject to a deduction of English income tax. Coupons paid by the London Office to or on account of persons resident in France, and those paid by the Crédit Mobilier Français, will be subject to a deduction on account of French transfer duty and income tax.

CONSOLIDATED GAS ELECTRIC LIGHT AND POWER COMPANY OF BALTIMORE.

REDEMPTION OF $[illegible] 5% TWO-YEAR CONVERTIBLE NOTES, DATED 15th MARCH, 1916.

NOTICE IS HEREBY GIVEN that the Company have under and in accordance with the terms of the issue called the above Notes for Redemption at par on the 7th January next, and holders are reminded that the 3rd January is therefore the last day for exercising the right attaching to their Notes of conversion into Common Shares of the Company, and that notice of intention to convert must be in the hands of the Company in Baltimore not later than the said 3rd January.

JOHN L. BAILEY, Treasurer.

MUNICIPALITY OF PARA IMPROVEMENTS, LIMITED.

NOTICE IS HEREBY GIVEN that a General Meeting of the Holders of Debentures of the above named Company, secured by the Trust Deed, dated the 3rd day of February, 1910, and made between the said Company of the one part, and Sir Gordon Blennerhassett Voules and Sir John Leach as Trustees of the other part, will be held at The Great Eastern Railway Hotel, Bishopsgate, in the City of London, on Monday, the Tenth day of January, 1916, at 12 o'clock noon, for the purpose of considering, and if thought fit, passing as Extraordinary Resolutions, and with or without amendment the subjoined Resolutions:—

RESOLUTIONS.

1. The Debenture Holders hereby authorise and direct Sir Gordon Blennerhassett Voules and Sir John Leach the Trustees of the Trust Deed dated the 3rd day of February, 1910, to enter into an Agreement in the terms of the draft expressed to be made between the above named Company of the first part, the said Trustees of the second part, James Drayson Austen Norris of the third part, and the Ethelburga Syndicate, Limited, of the fourth part (which has been submitted to the Meeting convened to pass these Resolutions and a copy of which has for the purpose of identification been initialled by one of the said Trustees) with such modifications (if any) as may be agreed upon by the parties thereto and also be sanctioned by the Chancery Division of the High Court of Justice, and hereby consent to any modification or release of their rights under the said Trust Deed which may be necessary for enabling the said agreement (with or without any such modifications as aforesaid) to be carried into effect.

2. For the purpose of enabling the said agreement (with or without such modifications as aforesaid) to be carried into effect the Debenture Holders agree to waive and release all claims against the Company in respect of any interest upon their said Debentures from the 1st July, 1915, and to accept in discharge of their claims against the Company in respect of the principal moneys secured by the Debentures held by them respectively and otherwise 5 per cent. Funding Bonds of the Municipality of Para at the rate of £13 6*s.* 8*d.* for every £20 of Debentures held by them respectively, and that the Debenture Holders agree to surrender to the Ethelburga Syndicate, Limited, or to such other person or persons on such date, at such place and generally in such manner as shall be determined by the said Trustees in accordance with the said Agreement the Debentures held by them respectively in exchange for the Bonds mentioned in this Resolution.

3. That the Trustees be authorised and they are hereby directed to concur with the Company in executing and doing all such documents acts and things as they may deem necessary or expedient for giving effect to these Resolutions.

This Notice is issued pursuant to the provisions contained in the First and Second Schedules to the said Trust Deed.

A copy of the said draft Agreement may during business hours be inspected at any time before the Meeting, at the Office of Mr. W. R. Southeard, the Solicitor for the Trustees, 65, Bishopsgate, in the City of London at which time and place any Debenture Holder may upon application obtain a print of the Report of the said Trustees relating to the circumstances which have made it expedient to call such Meeting, and propose such Resolutions, and containing directions as to the method in which any such Debenture Holder may qualify himself to attend, and vote at such Meeting.

GORDON B. VOULES.
JOHN LEACH,
Trustees for Debenture Holders.
